Dean Academic  
Global Academy of Technology,  
Rajara, Chawarinaragar, Bengaluru-98

*Bijoy*  
Head of the Department  
Dept. of Aeronautical Engineering  
Global Academy of Technology

## **PREAMBLE**

There has been a lot of discussion on the current mode of engineering education in our country and its impact on employability of fresh engineering graduates. Employability rating of fresh graduates is far from being satisfactory and industries are running short of trained and skilled manpower.

The demands of the society are dynamic, complex and keep changing at a rapid pace. Technological advancement is providing several innovations and breakthroughs exponentially in IT related domains like Artificial intelligence, Internet of Things, Machine learning, Automation and Robotics. These interventions are changing further the expectations of the society on products and services. In view of this, it becomes imperative to equip students to learn the art of linking science and engineering to the needs of the industry and society. The students must relate their learning to provide solutions to complex and real-life problems faced by the society. Engineering education needs to focus on how to apply knowledge to complex, unstructured problems in a global platform. The herculean task ahead of the engineering institutions is to produce graduates who are employable. Employability does not mean that a student should be placed in an industry before he/she leaves the portals of an institution. Employability means equipping engineering graduates with necessary technical skills, communication skills, leadership qualities, soft skills, professional ethics, and a social responsibility.

The onus of providing graduates with the attributes mentioned above lies with the institutions. Institutes should create conducive atmosphere where students learn to stimulate their creativity and develop their talents. The graduates must be trained to work in teams and must be exposed to interdisciplinary areas to establish better links with present generation industries. The domain boundaries have collapsed and most of the engineering streams are getting integrated and blended. It is therefore crucial that the graduates must be made to understand the nuances of the engineering education and the importance of creative thinking, innovation and being sensitive to societal changes.

Global Academy of Technology (GAT) has understood the importance of broad-based education and has created a conducive environment for the students to blossom into complete individuals. A true broad-based education prepares students for life, without losing their areas of specialization and competence. Our aim is to become a premier institution imparting quality education in engineering and management to meet the changing needs of the industry and society. The entire team at GAT is committed to realize the dream of making GAT an institution of eminence and creating an indelible impression in the area of engineering education.

The present focus of the institute is to improve the laboratory infrastructure by bringing new industry relevant technology to enable higher level of learning in students, foster integrated learning by providing multiple industry relevant interfaces, enable students to take up industry relevant projects and encourage faculty to take up research by providing ability to add customer logic.

With changing times and emergence of disruptive technologies, GAT stands strong in adapting and encompassing these into the mainstream in shaping students' career, thus contributing directly to society and nation building.

A handwritten signature in blue ink, appearing to be 'Bijay', with a long horizontal stroke extending to the right.

# 1. Global Academy of Technology

(Autonomous Institution under Visvesvaraya Technological University, Belagavi)

## An Overview

### 1.1 Vision of the Institute:

Become a premier institution imparting quality education in engineering and management to meet the changing needs of society.

### 1.2 Mission of the Institute:

- Create environment conducive for continuous learning through quality teaching and learning processes supported by modern infrastructure.
  - Promote Research and Innovation through collaboration with industries.
  - Inculcate ethical values and environmental consciousness through holistic education programs.

### 1.3 Objectives:

- With a very firm resolve, Global Academy of Technology is continuously investing untiring efforts to enable students to:
  - Develop careers in Government and Private engineering organizations and other professionally related domains.
  - Pursue higher studies and research to develop innovative solutions and technologies in engineering and other multi-disciplinary areas.
  - Improve professional and personal traits oriented towards professional ethics and environmental compulsions.
  - Inculcate professional leadership and successful entrepreneurship qualities.
  - Help society in raising the quality of life.

### 1.4 Quality Policies:

- Providing Excellent Education Through High Quality, Experienced and Committed Faculty.
- Evolving creative processes for optimal Knowledge and Skill Transfer.
- Building up state-of-the-art infrastructure at par with international standards.
- Creating an environment for holistic personality development and develop research temperament.

### 1.5 Hallmarks of Global Academy of Technology:

- Proactive management determined to build the institute as a Centre of Excellence in engineering education.
- Qualified and dedicated faculty in all the departments.
- State of the art Infrastructure and up to date laboratory and Library facilities.
- Lush green campus with an environment of tranquility and harmony.
- Student centric teaching-learning processes banking on Outcome Based Education;
- students' friendly learning atmosphere.
- Emphasis on Project based learning throughout the course.
- Strong Industry-Institute interface with more than twenty Memorandum of Understanding
- (MOUs) signed with leading industries and institutions of repute.
- Indian Institute of Information Technology (IIIT), Allahabad, has signed a MOU for providing internships to students of GAT, research assistance to faculty, and conducting Faculty Development Programs in key areas of IT - Big Data, Cloud Computing, Artificial Intelligence, and Machine Learning.
- Mahatma Gandhi University, Kottayam, has signed a MOU to facilitate research in Nano Technology and provide research assistance to faculty of GAT.
- Industrial consultancy undertaken in many departments.
- Excellent Placement with more than 80% of the eligible students placed in leading IT
- companies, core industries and Start-up companies.
- Holistic and integrated training modules covering communication skills, leadership skills, soft skills and technical skills through professional trainers.
- On campus and off campus internship facilities.
- Robust parent connects and Student counselling system.
- In-house technical skill training programs/add on courses to enhance the employability of the students.

- Strong and growing alumni connect in place
- Exclusive Research and Development, Industry–Institute Interaction Cell and Teaching and Learning Centre in place.
- Rainwater harvesting facility in the campus.

The following academic processes are implemented on a regular basis to sustain a meaningful and proactive teaching-learning environment:

- Emphasis on continuous revision of the curriculum, based on feedback from the students and input from industry, alumni, and other stakeholders.
- Conduction of regular training programme for faculty, technical & supporting staff.
- Conduction of Academic Audit of each department on an annual basis.
- Under open electives students have the options to study subjects offered by other departments to augment their interdisciplinary knowledge.
- Students have to do value added courses, mandatory courses, certificate courses, and become members of professional bodies, etc.
- Advanced and enrichment courses are offered as Electives during the final year UG and PG Degree Programmes.
- Self-Learning is encouraged in students through MOOCs, NPTEL/SWAYAM, Coursera, Edex etc. Credit shall be awarded to students for completion of such courses

## 2.0 Department of Aeronautical Engineering

### 2.1 Vision of the Department:

To emerge as an excellent center for imparting quality education and research to produce competent Aeronautical Engineers to meet the global challenges.

### 2.2 Mission of the Department:

M1: Empower the students with the fundamental knowledge and skill for a successful career in the field of Aeronautical Engineering, and facilitating them to continue their education through higher studies and Research & Development activities.

M2: Providing state of the art laboratories and infrastructure for academics and research in the areas of Aerodynamics, Structures, Propulsion and control systems.

M3: Enhancing industry-institute interaction leading to interdisciplinary research with social concern to become leaders in industries and/or become entrepreneurs with good

ethics.

### **2.3 About the Department:**

The Department of Aeronautical Engineering was established in the year 2020, affiliated to VTU, Belagavi, Karnataka, approved by AICTE. The department offers 4-year undergraduate programme, B.E. in Aeronautical Engineering. The department has a team of highly qualified, dedicated and motivated young and experienced faculties. The Department of Aeronautical Engineering has laboratories catering to students, scholars and faculty members for their academic and research activities. The curriculum is designed to impart engineering knowledge in topics such as Aerodynamics, Aircraft structures, Propulsion, Flight dynamics & Controls and UAVs. Further provision exists to acquire additional engineering knowledge through electives. The department prepares the graduates to undertake design, analysis, experimental and research activities as their careers in aeronautical engineering. The institution is located very closer to many leading aeronautical industries (ISRO, NAL, HAL, ADA, ADE etc.) and IT industries which will benefit the students in terms of collaboration.

The department activities are being monitored by the Department Advisory Board (DAB) and Program advisory committee (PAC) whose members are eminent personalities from industries, government organizations and R&D Sectors. The new initiative of establishing Research Centre in Aeronautical Engineering, GAT would provide researchers a good opportunity for enhancing their Research knowledge and Problem-solving.

### **3 Salient Features of Autonomy**

Autonomous institutions occupy pivotal positions and are the key interfaces between the industry and academia. Autonomous institutions can create the key channels required for scientific and industrial research and innovation, inclusive teaching and training, and initiatives to develop the eco system for creating more employment.

Autonomy means freedom and authority in academic matters. Autonomy bestows the teacher with the right to decide what to teach, how to teach, how much to teach and whom to teach.

Autonomy gives the privilege to:

- Run courses relevant to requirements of industries and society at large.
- Design Teaching-Learning methodologies, Assessment Tools and Methods, and Admission policies.
- Create an eco- system for holistic development of the individuals.
- Build strong academia and industry interface.
- Build the reputation of the institution through quality education.
- Industry relevant value-added courses during vacations.

- Internships in Industry/ R&D establishments in summer holidays.
- Building leadership qualities including spirit of tolerance and teamwork.
- There will be a lot of scope for industry- oriented skill development built-in into the system.
- Deliver engineering graduates who can effectively shoulder the responsibility of building a strong and vibrant INDIA.

GAT has Board of Governance, Academic Council, Boards of Studies, Boards of Examination, Finance Committee, and Institute Steering Committee. Stakeholders in these bodies comprise of Academicians, Researchers, Industry Experts, Faculty and Alumni. Governing Body of the autonomous college lays down policies and procedures for Governance of the college carried out through the Principal of the college. Academic Council is the apex academic body of the college responsible for approval of schemes of study, syllabi, examinations and evaluation methods, declaration of results, recommendation of candidates to the University for Award of degrees etc. The college constitutes different Boards of Studies for different branches of engineering. The BOS's are responsible for framing of schemes of study and detailed curricula, academic rules etc. Other bodies like Finance Committee, Recruitment Committee help in administration of the college.

### 3.1 Outcome Based Education (OBE):

Outcome based education (OBE) is student-centered instruction model that focuses on measuring student performance through outcomes. Outcomes include knowledge, skills and attitude. Its focus remains on evaluation of outcomes of the program by stating the knowledge, skill and behavior a graduate is expected to attain upon completion of a program and after 4 to 5 years of graduation.

The induction of India in the Washington Accord in 2014 with the permanent signatory status of The National Board of Accreditation (NBA) is considered a big leap forward for the higher-education system in India. It means that an Engineering graduate from India can be employed in any one of the other countries who have signed the accord. For Indian Engineering Institutions to get accredited by NBA according to the pacts of the accord, it is compulsory that engineering institutions follow the Outcome Based Education (OBE) model. So, for an Engineering Institution to be accredited by NBA it should compulsorily follow the OBE model.

The OBE model measures the progress of the graduate in three parameters, which are:

- Program Educational Objectives (PEO)
- Program Outcomes (PO)
- Course Outcomes (CO)

Outcome Based Education assesses students' performance, knowledge and skills through quiz, solving puzzles, giving an online presentation, modelling something, taking up a multiple - choice assessment. Assessments are criterion-focused which the students achieve during the learning period. Students are expected to go with the flow, think out of the box in order to implement outcome based education.

Students studying in an accredited program of an institution in India can be confident of getting an education which is of assured quality comparable to global standards. They can compete with their global counterparts for securing jobs in Multi-National Companies and other enterprises across the world. Students can also have global mobility- can work anywhere -in any corner of the globe. In addition, students will have access to the state-of-the-art facility, infrastructure, and access to highly qualified teaching faculty in an accredited program. Students would have acquired “graduate attributes” at the end of the course and will be industry ready. A student can also get into post- graduation and research.

### 3.2 Advantages of Outcome Based Education:

- **Student-centered** - It is an approach by which the learner’s mastery over a particular skill is demonstrated and measured.
- **Clarity in focus** - A learning outcome must be made obvious to the learner even at the outset of learning. This outcomes-based model works on bringing out the specific outcomes from the learners.
- **The curriculum is designed with a clear definition, outlining the expected outcomes.** This will pave a way to achieve the expanded opportunities in the student’s performance.
- **Exceeding expectations** - All students can deliver the highest level of performance. The only kick start needed is to make them believe and encourage, the only way to attain high expectation.
- **Expanded opportunities** - It means giving countless chances and ways to show the students that they have met with their objective. Not all learners learn the same thing, the same way, and at the same time. However, extended opportunities can help achieve high standards. They help students to learn what is mostly needed for the time and hour.

### 3.3 Program Outcomes (POs) as prescribed by National Board of Accreditation (NBA):

**PO1- Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

**PO2- Problem analysis:** Identify, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

**PO3- Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

**PO4- Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

**PO5- Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

**PO6- The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal, and cultural issues, and the consequent responsibilities relevant to the professional engineering practice.

**PO7- Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

**PO8- Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

**PO9- Individual and teamwork:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

**PO10- Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

**PO11- Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

**PO12- Life-long learning:** Recognize the need for and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

### 3.4 Program Specific Outcomes

**PSO1:** Apply the fundamental knowledge of Aerodynamics, Propulsion, Structures and Flight controls to solve core contemporary problems.

**PSO2:** Develop and use modern engineering tools to design and analyze the simple and complex problems in Aeronautical Engineering.

### 3.5 Some Definitions:

“Course” is a unit of teaching, which encompasses various topics, that typically lasts one semester, is led by one or more faculty and has a fixed registered student. Course means a subject either theory or practical identified by its title and code number.

“Program” – cohesive arrangements of courses, co- curricular extra-curricular activities to accomplish predetermined objectives leading to award of a Degree.

“Degree”- Academic award conferred upon a student on successful completion of a

program designed to achieve the defined attributes.

### **3.6 Choice Based Credit System (CBCS):**

**Major Benefits:** Major benefits accruing by adopting the Credit System are listed below:

- Quantification and uniformity in the listing of courses for all programmes at a college, like core (hard/soft), electives and project work.
- Ease of allocation of courses under different heads by using their credits to meet national/international practices in technical education.
- Convenience to specify the minimum/ maximum limits of course load and its average per semester in the form of credits to be earned by a student.
- Flexibility in programme duration for students by enabling them to pace their course load within minimum/maximum limits based on their preparation and capabilities.
- Wider choice of courses available from any department of the same College or even from other similar Colleges, either for credit or for audit.
- Improved facility for students to optimize their learning by availing of transfer of credits earned by them from one College to another.

As the Credit System has many advantages over the conventional system of organizing academic programs, GAT has introduced an appropriate Choice Based Credit System (CBCS) for the various programs. This will be of great benefit to the students in their preparations to meet the challenging opportunities ahead. In the Credit System, the course work of students is unitized, and each unit is assigned one credit after a student completes the teaching-learning process as prescribed for that unit and is successful in its assessment. However, there are different definitions followed in academic circles for the size of a unit and in turn, for a credit.

### **3.7 Credit Definition:**

As it is desirable to have uniformity in the definition of credit across all Autonomous Colleges under the University, the following widely accepted definition for credit shall be followed at GAT. This can provide the good flexibility to the students and also strengthens CBCS under the University. Here, one unit of course work and its corresponding one credit (while referring to a Main Semester) shall be equal to:

- I. Theory course conducted for 1 hour/week/ semester;
- II. Laboratory course or Tutorial conducted for 2 hours/week/semester. The following additional factors may also be noted in this connection:
- III. The above figures shall be multiplied by a factor of 2 in the case of the Supplementary Semester,
- IV. Other student activities which are not demanding intellectually, or which do not lend to effective assessment, like practical training, study tours, attending

guest lectures shall not carry any credit.

**Audit Courses:** In Addition, a student can register for courses for audit only with a view to supplement his/her knowledge and/or skills. Here also, the student's grades will have to be reflected in the Grade Card. These courses shall not be considered in determining the student's academic performance in the semester. In view of this, it may not be necessary for the college to issue any separate transcript covering the audit courses to the registrants at these courses.

For more details on the academic regulations, students are advised to refer Academic Rules and regulations document available on the college website [www.gat.ac.in](http://www.gat.ac.in).

### 3.8. Credit Distribution among Curricular components:

Sl. No.	Curricular Component	Credits allocated	Percentage of allocation
1.	Humanities and Basic Sciences (BS)	8	7
2.	Integrated Professional Courses core including labs (IPC)	37	31
3.	Professional Courses core (PC)	26	22
4.	Emerging Science Course (ESC)	6	5
5.	Ability Enhancement Course (AEC)	7	6
6.	Professional Elective Courses (PEC)	15	13
7.	Open Elective Courses (OEC)	6	5
8.	Project work+ Mini project+ Technical Seminar	15	13
9.	<b>Total</b>	120	100

**\*NPTEL for Credit transfer:** Students can take 12 weeks NPTEL course as an equivalent to Program elective. The NPTEL courses of duration less than 12 weeks will not be considered for credit transfer. The courses (only technical) NPTEL should not exceed a maximum of 40% of the courses being registered by the student. The NPTEL course need to be completed before the registration of the elective. Any certificate obtained after the registration of elective would not be considered. The validity of NPTEL certificate is for two years and it cannot be used more than once to avail the benefit. The student is eligible to transfer a maximum of nine credits in the entire duration of the program. The grades will be awarded as equivalent to the grades obtained in the NPTEL course.

## SEMESTER – III SYLLABUS

Head of the Department  
Dept. of Aeronautical Engineering  
**Global Academy of Technology**  
- R.R. Nagar, Bengaluru - 560 098.

## SEMESTER – III SYLLABUS

### COURSE: COMPLEX VARIABLES AND PROBABILITY (COMMON FOR ME/AE)

<b>Course Code</b>	22MAT31C	<b>CIE Marks</b>	<b>50</b>
<b>Hours/Week (L: T: P)</b>	2:2:0	<b>SEE Marks</b>	<b>50</b>
<b>No. of Credits</b>	3	<b>Examination Hours</b>	<b>03</b>

**Course Objectives:** To enable students to apply the knowledge of mathematics in the field of engineering by making them to learn:

<b>CLO1</b>	Analytic functions and complex line integrals
<b>CLO2</b>	Probability distributions
<b>CLO3</b>	Joint probability distributions
<b>CLO4</b>	Sampling distributions and testing of hypothesis

Content	No.of Hours/ RBT levels
<b>Module 1</b> Function of a complex variable, Analytic functions, Cauchy-Riemann equations, construction of analytic functions using Milne Thomson method, Properties of analytic functions.	<b>08 Hours</b> L2, L3
<b>Module 2</b> Conformal mapping, Bilinear transformations. Complex line integrals, Cauchy's theorem, Cauchy's integral formula, Singularities, poles, residues, Cauchy's residue theorem.	<b>08 Hours</b> L2, L3
<b>Module 3</b> Probability, Axioms of probability, Conditional probability, Bayes theorem, Discrete and continuous random variables, Moments, Moment generating functions, Binomial, Uniform, Poisson, Exponential, Normal distributions.	<b>08 Hours</b> L2, L3
<b>Module 4</b> Joint distributions (both discrete and continuous), Marginal and conditional distributions, Expectation and Covariance. Transformation of random variables, Central limit theorem and law of large numbers.	<b>08 Hours</b> L2, L3
<b>Module 5</b> Sampling, Sampling distributions, standard error, test of hypothesis for means and proportions, student's t-distribution, chi-square distribution as a test of goodness of fit.	<b>08 Hours</b> L2, L3

#### COURSE OUTCOMES:

Upon completion of this course, student will be able to:

<b>CO31.1</b>	Apply Cauchy Riemann equations to study different properties of analytic functions
<b>CO31.2</b>	Evaluate complex line integrals
<b>CO31.3</b>	Solve problems associated with random variables using probability distributions
<b>CO31.4</b>	Solve problems related to testing of hypothesis

### Textbooks:

1. B. S. Grewal, Higher Engineering Mathematics, Khanna Publishers 44th Edition, 2017
2. T Veerarajan, Probability, Statistics and Random Processes for Engineers, Tata McGraw Hill, 3rd Edition, 2008

### Reference books:

1. B.V. Ramana, Higher Engineering Mathematics, Tata McGraw-Hill, 2006
2. N.P.Bali and Manish Goyal, A Textbook of Engineering Mathematics, Laxmi Publications 6th Edition, 2014
3. Richard H Williams, Probability, Statistics and Random Processes for Engineers, Cengage Learning, 1st Edition, 2003.

### **Scheme of Examination:**

#### **Semester End Examination (SEE):**

SEE Question paper is to be set for 100 marks and the marks scored will be proportionately reduced to 50. There will be two full questions (with a maximum of three sub questions) from each module carrying 20 marks each. Students are required to answer any five full questions choosing at least one full question from each module.

#### **Continuous Internal Evaluation (CIE):**

Three Tests are to be conducted for 40 marks each. Average of Marks scored in all three tests is added to test component. CIE is executed by way of quizzes / Alternate Assessment Tools (AATs), and three tests. Some possible AATs: seminar/assignments/ mini-projects/ concept videos/ partial reproduction of research work/ group activity/ any other.

Typical Evaluation pattern for regular courses is shown in Table 2.

**Table 2: Distribution of weightage for CIE & SEE of Regular courses**

Component		Marks	Total Marks
CIE	CIE Test-1	40	50
	CIE Test-2	40	
	CIE Test-3	40	
	Assignments	10	
SEE	Semester End Examination	50	50
<b>Grand Total</b>			<b>100</b>

CO/PO Mapping																
CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3	PSO4
CO31.1	3	2	1									3				
CO31.2	3	2	1									3				
CO31.3	3	2	1									3				
CO31.4	3	2	1									3				
Average	3	2	1									3				

**Low-1: Medium-2: High-3**

## SEMESTER – III

### COURSE: FLUID MECHANICS

<b>Course Code</b>	<b>22ANE32</b>	<b>CIE Marks</b>	<b>50</b>
<b>Hours/Week (L: T: P)</b>	<b>3:0:2</b>	<b>SEE Marks</b>	<b>50</b>
<b>No. of Credits</b>	<b>4</b>	<b>Examination Hours</b>	<b>03</b>

**Course Objectives:** To enable students to apply the knowledge of Fluid Mechanics in broad domain of Aeronautical Engineering by making them to learn:

<b>CLO1</b>	The properties of fluids and its Characteristic are studied
<b>CLO2</b>	To understand the importance of dimensional analysis
<b>CLO3</b>	The applications of the conservation laws to flow through pipes are studied
<b>CLO4</b>	To understand the importance of Flow Measuring devices.
<b>CLO5</b>	To understand the importance of Viscous effect.

<b>Content</b>	<b>No. of Hours/ RBT levels</b>
<b>Module 1</b> <b>Fluids:</b> Introduction, Properties of fluids, Viscosity, Types of fluids, Compressibility and Bulk Modulus. <b>Fluid Statics:</b> Fluid Pressure at a Point, Pascal’s law, Pressure variation in a Static fluid, Absolute, Gauge, Atmospheric and Vacuum Pressures. Simple Manometer and Differential Manometer. Total Pressure and center of Pressure on Submerged Plane Surfaces.	<b>08 Hours L3</b>
<b>Module 2</b> <b>Buoyancy:</b> Buoyancy, Center of Buoyancy, Meta-Centre and Meta-Centric Height, Conditions of Equilibrium of Floating and Submerged Bodies, Determination of Meta-Centric Height. <b>Dimensional Analysis:</b> Introduction, Derived Quantities, Dimensions of Physical Quantities, Dimensional Homogeneity, Rayleigh’s Method, Buckingham's II Theorem, Types of Similarities and Dimensionless Numbers.	<b>08 Hours L3</b>
<b>Module 3</b> <b>Fluid Kinematics:</b> Types of Fluid Flow, Continuity Equation in 2D and 3D Velocity and Acceleration. Velocity Potential Function and Stream Function, Flow net, Fundamentals of flow visualization stream lines, stream tube, timeline, path lines, streak lines, flow visualization techniques. Vortex Flow - Free and Forced Vortex	<b>08 Hours L3</b>
<b>Module 4</b> <b>Fluid Dynamics:</b> Introduction, Equation of motion, Euler’s equation of Motion, Bernoulli’s equation from first principles, limitations of Bernoulli’s equation. <b>Fluid Flow Measurements:</b> Venturimeter, Orifice meter, pitot-tube, vertical orifice, V-Notch and Rectangular notches.	<b>08 Hours L3</b>
<b>Module 5</b> <b>Flow through pipes:</b> Minor Energy losses through pipes. Darcy's and Chezy’s equation $f$ -or loss of head due to Friction in pipes.	<b>08 Hours L3</b>

<b>Viscous Flow:</b> Reynolds's number, Critical Reynold's number, Laminar flow, Turbulent flow, Viscous flow through Circular Pipe-Hagen Poiseille's formula, Viscous flow between two parallel plates and, Boundary layer concept.	
--	--

## Laboratory Exercises

### LIST OF EXPERIMENTS

1. Determine the flow of fluid using Venturimeter and coefficient of discharge of Venturimeter.
2. Determine the flow of fluid using Orifice-meter and determine the coefficient of discharge.
3. Determine the coefficient of discharge of Notches (V-type and rectangular types)
4. Determination of Vane Coefficient for Flat Vane and Semi-circular Vane.
5. Determination of Minor Losses in Flow through pipes.
6. Determination of Coefficient of Friction of flow in a pipe.
7. Experimental Validation of Bernoulli's Equation through Fluid Flow.
8. Determination of Reynolds Number.
9. Performance Testing of a Single Stage Reciprocating Pumps.
10. Performance Characteristics of Kaplan Turbine.
11. Performance Characteristics of Francis Turbine.

COURSE OUTCOMES: Upon completion of this course, student will be able to:

<b>CO32.1</b>	Apply Fundamental knowledge to Predict the Properties and Characteristics of fluid.
<b>CO32.2</b>	Apply principle of dimensional analysis & similitude to simple engineering problems and describe buoyancy force.
<b>CO32.3</b>	Understand the Kinematics of fluid flow and Continuity Equation.
<b>CO32.4</b>	Analyse the Forces and energy for the fluid flow in a conduit and compare the different flow Measuring devices.
<b>CO32.5</b>	Analyse the losses and viscous effects in the flow through pipes.

## SEMESTER – III

### COURSE: SOLID MECHANICS

Course Code	22ANE33	CIE Marks	50
Hours/Week (L: T: P)	3:0:2	SEE Marks	50
No. of Credits	4	Examination Hours	03

**Course Objectives:** To enable students to apply the knowledge of Solid Mechanics in broad domain of Aeronautical Engineering by making them to learn:

<b>CLO1</b>	To understand the concepts of stress, strain.
<b>CLO2</b>	To study the concept of shearing force and bending moment due to external loads.
<b>CLO3</b>	To determine stresses and deformation under bending and shear load.
<b>CLO4</b>	To determine stresses and deformation in circular shafts due to torsion, also to determine deflection in beams.
<b>CLO5</b>	To study the stresses and deformations induced in thin and thick shells.

Content	No. of Hours/RBT levels
<b>Module 1</b>	
<b>Stresses and Strains:</b> Introduction to Stress, Types of stress, Strain, Types of Strain, Modulus of Elasticity, True Stress, True Strain, Simple problems, Stress Strain Diagram of Ductile, Brittle, Visco- Elastic, Linear & Non-linear Elastic materials, Bars with varying sections, Bars of composite sections, Simple problems, Thermal stresses, Simple problems, Elastic constants and its relation, volumetric strains, Simple problems.	<b>08 Hours</b> <b>L3</b>
<b>Module 2</b>	
<b>Compound Stresses:</b> Methods of Determining stresses in oblique sections, Principal planes and stresses, Simple problems, Construction of Mohr's circle, simple problems. <b>Shear Force and Bending Moment Diagram:</b> Introduction to shear force, bending moment, Types of Beams and loads, sign convention for shear force and bending moment, Shear force and bending moment diagram for various beams. Relation between shear force and bending moment.	<b>08 Hours</b> <b>L3</b>
<b>Module 3</b>	
<b>Bending Stresses and shear stress in Beams:</b> Introduction, Pure Bending and Simple Bending, Expression of Bending stress, Neutral axis and Moment of resistance, bending stress in symmetrical sections, Section modulus, Section modulus for various shapes of the beam section. Introduction to shear stress, shear stress distribution for different section	<b>08 Hours</b> <b>L3</b>
<b>Module 4</b>	
<b>Torsion of Shafts:</b> Introduction to torsion, Derivation of shear stress produced in a circular shaft subjected to Torsion, Expression of Torque in terms of polar moment of Inertia, Power transmitted by shaft, simple problem.	<b>08 Hours</b> <b>L3</b>

<b>Module 5</b>	
<p><b>Column and struts:</b> Introduction to columns and struts, Failure of a column, Expression of crippling load when (a) both ends are hinged (b) One end of the column is fixed and the other end is free (c) both ends are fixed (d) One end is fixed and the other end is hinged. Simple problems to be solved used Euler's formula and Rankine formula.</p> <p><b>Thick and Thin cylinders:</b> Thin cylinders subjected to internal pressure. Stresses in a thin cylinder subjected to internal pressure, Expression of circumferential stress and hoop stress, Simple problems Thick Cylinder: Lamé's theorem, Stresses in a thick cylinder, Simple problems to be solved.</p>	<p><b>08 Hours L3</b></p>

### Laboratory Exercises

#### LIST OF EXPERIMENTS

1. Brinell, Rockwell and Vicker's hardness test on various specimens.
2. Izod and Charpy test on various specimens using impact-testing machine.
3. Preparation and study of the Micro Structure of pure metals Mild Steel, Low Carbon steel and High Carbon Steel.
4. To study the defects of cast and welded components using non-destructive tests:
  - a. Magnetic crack detection.
  - b. Dye penetration testing.
5. Tensile test of metallic and non-metallic specimen using Universal Testing Machine.
6. Compression test of metallic and non-metallic specimen using Universal Testing Machine.
7. Shear and Bending tests of metallic and non-metallic specimen using Universal Testing Machine.
8. Torsion test on metallic specimen using torsion testing machine.
9. To study the wear characteristics of metals and non-metal materials under different parameters.
10. Fatigue Test (demonstration only).

#### COURSE OUTCOMES:

**Upon completion of this course, student will be able to:**

<b>CO33.1</b>	Understand and apply the principles of stresses and strains.
<b>CO33.2</b>	Proficient in determining stresses in oblique sections and analyzing principal planes and stresses
<b>CO33.3</b>	Demonstrate a deep understanding of Bending Stresses and Shear Stress in Beams
<b>CO33.4</b>	Evaluate torsional behavior of shaft material and the hardness of the ferrous and non-ferrous materials.
<b>CO33.5</b>	Analyze the behavior of columns and struts, understanding the failure of columns, and calculating the crippling load under various conditions. Also, the stress distribution in thick and thin cylinder.

## SEMESTER – III

### COURSE: AERO THERMODYNAMICS

Course Code	22ANE34	CIE Marks	50
Hours/Week (L: T: P)	2:2:0	SEE Marks	50
No. of Credits	3	Examination Hours	03

**Course Learning Objectives:** To enable students to apply the knowledge of Aero Thermodynamics in broad domain of Aeronautical Engineering by making them to learn:

<b>CLO1</b>	Basic knowledge on the fundamental concepts of thermodynamics
<b>CLO2</b>	The First law of thermodynamics and its application in Various flow systems
<b>CLO3</b>	The second law of thermodynamics applying to systems and the concept of entropy.
<b>CLO4</b>	Basic knowledge on standard air cycles
<b>CLO5</b>	To get exposure on the basic concepts of Heat and Mass transfer.

Content	No. of Hrs /RBT Levels
<b>Module-1</b>	
<b>Fundamental Concepts</b> Continuum and macroscopic approach; Thermodynamic Systems: open, closed and isolated; Thermodynamic properties and equilibrium; State of a system, state postulate for simple compressible substances, state diagrams, paths and processes on state diagrams; zeroth law of thermodynamics; concept of temperature.	<b>08Hours</b> <b>L1, L2</b>
<b>Module-2</b>	
<b>First Law of Thermodynamics</b> Concept of energy and various forms of energy; concepts of heat and work, different modes of work; internal energy, enthalpy; specific heats; first law applied to elementary processes, closed systems and control volumes, steady flow analysis of nozzles, diffusers, throttling devices, mixing, turbines and compressors; unsteady flow analysis.	<b>10 Hours</b> <b>L2,L3</b>
<b>Module-3</b>	
<b>Second Law of Thermodynamics and Entropy</b> Limitations of the first law of thermodynamics, concepts of heat engines and heat pumps/refrigerators, Kelvin-Planck and Clausius statements and their equivalence; reversible and irreversible processes. Carnot cycle and Carnot theorems; thermodynamic temperature scale; Clausius inequality and concept of entropy; the principle of increase of entropy, T-s diagrams; availability and irreversibility	<b>8 Hours</b> <b>L2,L3</b>
<b>Module-4</b>	
<b>Air Standard Cycles</b> Otto, Diesel, Dual, Ericsson, Atkinson, Stirling and Brayton cycles - air standard efficiency - Mean effective Pressure.	<b>8 Hours</b> <b>L2,L3</b>
<b>Module-5</b>	
<b>Basics of Heat and Mass Transfer</b> Modes of heat transfer, Basic laws governing Heat transfer, combined heat transfer mechanism. Boundary conditions of 1st, 2nd and 3rd kind. Introduction to mass transfer, definition and terms used in mass transfer, Fick's law of diffusion, Numerical.	<b>8 Hours</b> <b>L2,L3</b>

**COURSE OUTCOMES:**

**Upon completion of this course, student will be able to:**

<b>CO34.1</b>	Relate laws of thermodynamics in various engineering problems.
<b>CO34.2</b>	Differentiate thermodynamic work and heat and apply I law of thermodynamics to different process
<b>CO34.3</b>	Choose and analyze the feasibility of design variables using thermodynamics principles.
<b>CO34.4</b>	Utilize the different types of air standard cycles
<b>CO34.5</b>	Select and Calculate heat transfer involving several heat transfer mechanisms.

**Scheme of Examination:**

**Semester End Examination (SEE):**

**SEE Question paper is to be set for 100 marks and the marks scored will be proportionately reduced to 50.** There will be two full questions (with a maximum of four sub questions) from each module carrying 20 marks each. Students are required to answer any **five full questions** choosing at least **one full question from each module.**

**Continuous Internal Evaluation (CIE):**

Three Tests are to be conducted for **40 marks each.** CIE is executed by way of quizzes/ Alternate

Assessment Tools (AATs) for 10 marks. Typical Evaluation pattern for regular courses is shown in Table 1.

Table1: Distribution of weightage for CIE & SEE of Regular courses

	Component	Marks	Total Marks
CIE	CIE Test-1	<b>40</b>	<b>50</b>
	CIE Test-2		
	CIE Test-3

## SEMESTER – III

### COURSE: AEROSPACE MATERIALS AND DIGITAL MANUFACTURING

<b>Course Code</b>	<b>22ANE35</b>	<b>CIE Marks</b>	<b>50</b>
<b>Hours/Week (L: T: P)</b>	<b>3:0:0</b>	<b>SEE Marks</b>	<b>50</b>
<b>No. of Credits</b>	<b>3</b>	<b>Examination Hours</b>	<b>03</b>

**Course Objectives:** To enable students to apply the knowledge of Aircraft Materials and Production in broad domain of Aeronautical Engineering by making them to learn:

<b>CLO1</b>	Learn about the basic properties of the materials used in aerospace industries
<b>CLO2</b>	Know about ferrous and non-ferrous materials used in aerospace industry
<b>CLO3</b>	Understand the significance of composites in aircraft industry
<b>CLO4</b>	Familiarize with the sheet metal and riveting process
<b>CLO5</b>	To study about the additive manufacturing technology

Content	No. of Hours/RBT levels
<b>Module 1</b> <b>Mechanical Behavior of Engineering Materials</b> Introduction to aerospace materials and their classification, Linear and non-linear elastic properties, various material testing machines. <b>Non-ferrous materials in aircraft construction</b> Aluminum and its alloys: Types and identification. Properties -Castings- Heat treatment processes - Surface treatments. Magnesium and its alloys: Cast and Wrought alloys - Aircraft application, features specification, fabrication problems, Special treatments. Titanium and its alloys: Applications, machining, forming, welding and heat treatment, other alloys used in aircrafts.	<b>08 Hours/ L2</b>
<b>Module 2</b> <b>Aircraft Composites</b> Polymer composites, metal matrix composites and ceramic composites in aerospace industry-Basics, Types, significance, properties, advantages, disadvantages and application in aero industry. C-C composites, ablative materials, Ultra high temperature ceramics. Composite repairing.	<b>08 Hours/ L2</b>
<b>Module 3</b> <b>Sheet Metal Processes in Aircraft Industry</b> Sheet metal operations: shearing, punching, super plastic forming; operations in bending like stretch forming spinning drawing. Riveting, types and techniques, equipment, fasteners, integral tanks, Jigs and Fixtures.	<b>08 Hours/ L2</b>
<b>Module 4</b> <b>Additive Manufacturing Technology</b> Principle, Advantages of additive manufacturing, General limitation of additive manufacturing, development of additive manufacturing technology: Laser Printing Technologies, Programmable Logic Controllers, Materials, Computer Numerically Controlled Machining. Fused deposition Modeling (FDM)	<b>10 Hours/ L2</b>

Principle, details of processes.	
<b>Module 5</b>	
<b>Solid Based Additive Manufacturing Systems</b> Fused deposition Modeling (FDM): Principle, details of processes.	<b>08Hours/ L2</b>
<b>Liquid Based Additive Manufacturing Systems</b> Stereolithographic Apparatus (SLA): Principle.	
<b>Powder Based Additive Manufacturing Systems</b> SLS process description, Powder fusion mechanisms	

**COURSE OUTCOMES:** Upon completion of this course, student will be able to:

<b>CO35.1</b>	Apply knowledge to grasp the fundamental properties of aerospace materials.
<b>CO35.2</b>	Analyze and select appropriate composites for specific aircraft applications
<b>CO35.3</b>	Differentiate and describe the sheet metal and fabrication processes employed in the aircraft industry.
<b>CO35.4</b>	Comprehensively analyze additive manufacturing processes and their applications in aerospace.
<b>CO35.5</b>	Comprehend the additive manufacturing processes

**Textbooks:**

1. Aircraft Material and Processes Titterton G F Lienhard V English Book Store, New Delhi 5th Ed.,1998
2. S. Kalpakjian, Steven R. Schmid, “Manufacturing Engineering and Technology”, Addison Wesley, 5<sup>th</sup> Edition, 1991.

## SEMESTER – III

### COURSE: ABILITY ENHANCEMENT COURSE- ELEMENTS OF AERONAUTICS

<b>Course Code</b>	<b>22ANE36</b>	<b>CIE Marks</b>	<b>50</b>
<b>Hours/Week (L: T: P)</b>	<b>3:0:0</b>	<b>SEE Marks</b>	<b>50</b>
<b>No. of Credits</b>	<b>3</b>	<b>Examination Hours</b>	<b>03</b>

**Course Objectives:** To enable students to apply the knowledge of Introduction to Aeronautical Engineering in broad domain of Aeronautical Engineering by making them to learn:

<b>CLO1</b>	Understand the Historical evaluation of Airplanes & different structures & construction
<b>CLO2</b>	Understand the basic properties and principles behind the flight
<b>CLO3</b>	Study the various types of power plants used in aircrafts
<b>CLO4</b>	Study of the aircraft Stability
<b>CLO5</b>	Study the different component systems and functions

<b>Content</b>	<b>No. of Hours/ RBT levels</b>
<p style="text-align: center;"><b>Module 1</b></p> <p><b>Introduction to Aircrafts</b> History of aviation; Atmosphere and its properties; Classification of aircrafts; Basic components of an aircraft; structural members; aircraft axis system; aircraft motions; control surfaces and high lift devices; conventional design configurations; Helicopters, their parts and functions.</p> <p><b>Aircraft Structures and Materials</b> Introduction; general types of construction; monocoque, semi monocoque and geodesic structures; typical wing and fuselage structure; metallic and non-metallic materials for aircraft application.</p>	<b>08 Hours L3</b>
<p style="text-align: center;"><b>Module 2</b></p> <p><b>Aerodynamics</b> Basic principles of flight – significance of speed of sound; airspeed and groundspeed; Bernoulli’s theorem; forces over wing section, aero foil nomenclature, pressure distribution over a wing section. Lift and drag components, lift curve, drag curve, types of drag, factors affecting lift and drag; Centre of pressure and its significance; aerodynamic Centre, aspect ratio, Mach number and supersonic flight.</p>	<b>08 Hours L3</b>
<p style="text-align: center;"><b>Module 3</b></p> <p><b>Aircraft Propulsion</b> Aircraft power plants, classification based on power plant and principle of operation. Turboprop, turbojet and turbofan engines; ramjets and scramjets; performance characteristics. Aircraft power plants – basic principles of piston, turboprop and jet engines; Brayton cycle and its application to gas turbine engines; use of propellers and jets for production of thrust; comparative merits and limitations of different types of propulsion engines; principle of thrust augmentation.</p>	<b>08 Hours L3</b>

<b>Module 4</b>	<b>08 Hours L3</b>
<p><b>Aircraft Stability</b> Forces on an aircraft in flight; static and dynamic stability; longitudinal, lateral and roll stability; necessary conditions for longitudinal stability; basics of aircraft control systems. Performance of aircraft – power curves, maximum and minimum speeds for horizontal flight at a given altitude; effect of changes in engine power and altitude on performance; correct and incorrect angles of bank; aerobatics.</p>	
<b>Module 5</b>	<b>10 Hours L3</b>
<p><b>Aircraft Systems</b> Mechanical systems and their components; hydraulic and pneumatic systems; oxygen System; environmental Control System; fuel system. Electrical systems, flight deck and cockpit systems; navigation system, communication system. Flight control system, cockpit instrumentation and displays; communication systems; navigation systems; power generation systems – engine driven alternators, auxiliary power Module, ram air turbine; power conversion, distribution and management.</p>	

**COURSE OUTCOMES:**

**Upon completion of this course, student will be able to:**

<b>CO36.1</b>	Learn the history of aircraft & developments over the years, acquire knowledge on Aircraft differentiate types and constructions
<b>CO36.2</b>	Understand the basic concepts of flight & Physical properties of Atmosphere
<b>CO36.3</b>	Understand the Different types of Engines and principles of Rocket
<b>CO36.4</b>	Understand the Basics of aircraft Stability
<b>CO36.5</b>	Ability to identify the types & classifications of components and control systems

**Textbooks:**

## SEMESTER IV SYLLABUS

Head of the Department  
Dept. of Aeronautical Engineering  
Global Academy of Technology  
- R.R. Nagar, Bengaluru - 560 098.

## SEMESTER IV

### COURSE: TRANSFORMS CALCULUS AND NUMERICAL TECHNIQUES

<b>Course Code</b>	<b>22MAT41C</b>	<b>CIE Marks</b>	<b>50</b>
<b>Hours/Week (L: T: P)</b>	<b>2:2:0</b>	<b>SEE Marks</b>	<b>50</b>
<b>No. of Credits</b>	<b>3</b>	<b>Examination Hours</b>	<b>03</b>

**Course Objectives:** To enable students to apply the knowledge of Mathematics in various fields of engineering by making them to learn:

<b>CLO1</b>	Laplace Transforms
<b>CLO2</b>	Fourier series and Fourier Transforms
<b>CLO3</b>	Numerical Methods

Content	No. of Hours/ RBT levels
<b>Module 1</b> Laplace transforms of elementary functions, Unit-step and Dirac delta functions. Inverse Laplace Transforms, Solution of second order linear differential equations using Laplace transforms.	<b>08 Hours</b> <b>L2, L3</b>
<b>Module 2</b> Fourier series of periodic functions, half range Fourier sine and cosine series. Infinite Fourier transforms, Fourier sine and cosine transforms. Inverse Fourier transforms.	<b>08 Hours</b> <b>L2, L3</b>
<b>Module 3</b> Solution of algebraic and transcendental equations: Regula-Falsi and Newton-Raphson method. Finite differences: Newton's forward and backward difference formulae. Newton's divided difference formula and Lagrange's interpolation formula. Numerical integration: Simpson's 1/3rd, 3/8th, Weddle's rule.	<b>08 Hours</b> <b>L2, L3</b>
<b>Module 4</b> Numerical solution of ordinary differential equations of first order and first degree using Modified Euler method, Runge-Kutta method of fourth order, Milne's and Adam-Bashforth predictor and corrector methods. Numerical solution of second order ordinary differential equations: Runge-Kutta method and Milne's method.	<b>08 Hours</b> <b>L2, L3</b>
<b>Module 5</b> One dimensional wave and heat equation. Solution of heat and wave equation by method of separation of variables. Two-dimensional heat flow, Solution of Laplace's equation, Laplace's equation in polar coordinates. Two-dimensional wave equation. Numerical solution of heat and wave equations.	<b>08 Hours</b> <b>L2, L3</b>

#### COURSE OUTCOMES:

Upon completion of this course, student will be able to:

<b>CO41.1</b>	Determine Laplace and inverse Laplace transforms of given functions and solve linear differential equations
<b>CO41.2</b>	Determine Fourier series and Fourier Transform of given function.
<b>CO41.3</b>	Apply numerical techniques to solve algebraic and transcendental equations.
<b>CO41.4</b>	Apply numerical techniques for interpolation and to evaluate definite integrals.

<b>CO41.5</b>	Solve ordinary differential equations of first and second order using single step and multistep numerical methods
<b>CO41.6</b>	Solve problems related to heat and wave equations

**Textbooks:**

- N.P.Bali and Manish Goyal, A Textbook of Engineering Mathematics, Laxmi Publications 6th Edition, 2014

**Scheme of Examination:**

**Semester End Examination (SEE):**

**SEE Question paper is to be set for 100 marks and the marks scored will be proportionately reduced to 50.** There will be two full questions (with a maximum of three sub questions) from each module carrying 20 marks each. Students are required to answer any **five full questions** choosing at least **one full question from each module.**

**Continuous Internal Evaluation (CIE):**

Three Tests are to be conducted for 40 marks each. Average of Marks scored in all three tests is added to test component. CIE is executed by way of quizzes / Alternate Assessment Tools (AATs), and three tests. **Some possible AATs:** seminar/assignments/ mini-projects/ concept videos/ partial reproduction of research work/ group activity/ any other.

Typical Evaluation pattern for regular courses is shown in Table 2.

**Table 2: Distribution of weightage for CIE & SEE of Regular courses**

Component		Marks	Total Marks
CIE	CIE Test-1	40	50
	CIE Test-2	40	
	CIE Test-3	40	
	Assignments	10	
SEE	Semester End Examination	50	50
<b>Grand Total</b>			<b>100</b>

<b>CO41.6</b>	3	2	1									3				
<b>Average</b>	3	2	1									3				

**Low-1: Medium-2: High-3**

## SEMESTER IV

### COURSE: LOW SPEED AERODYNAMICS

<b>Course Code</b>	<b>22ANE42</b>	<b>CIE Marks</b>	<b>50</b>
<b>Hours/Week (L: T: P)</b>	<b>3:0:2</b>	<b>SEE Marks</b>	<b>50</b>
<b>No. of Credits</b>	<b>4</b>	<b>Examination Hours</b>	<b>03</b>

**Pre-requisite: Fluid Mechanics**

**Course Objectives:** To enable students to apply the knowledge of aerodynamics in broad domain of aeronautical engineering by making them to learn:

<b>CO1</b>	The governing equations of fluid flow for incompressible inviscid flow
<b>CO2</b>	Understand the concept of superposition of elementary flows for inviscid, incompressible flow
<b>CO3</b>	Methods for describing airflow around airfoils and calculating Aerodynamic Coefficients
<b>CO4</b>	Understand the flow behavior over a finite wing and calculating the aerodynamic forces
<b>CO5</b>	Viscous Flow: boundary layer, velocity profile, thickness and friction coefficient.

<b>Content</b>	<b>No. of Hours/ RBT levels</b>
<b>Module 1</b> <b>REVIEW OF BASIC DEFINITIONS &amp; EQUATIONS</b> Importance of Aerodynamics, Fundamental aerodynamics, variables and dimensional analysis leading to Forces & Moments coefficient and dimensionless similarity parameters such as Reynolds number, Mach number, Incompressible flow, Compressible flow and Types of Flows. Models of the Fluid: Control volume, and Fluid Elements. Continuity, Momentum and Energy Equations.	<b>10 Hours</b> <b>L3</b>
<b>Module 2</b> <b>INVISID, INCOMPRESSIBLE FLOW</b> Path lines, Streamlines, Streak lines, Angular Velocity, Vorticity, Stream Function and Velocity Potential function and Circulation. Basic flows – Uniform parallel flow, Source and Sink, Doublet, Vortex Flow and Combinations of basic flows. Non lifting flow and Lifting flow over circular cylinder, Kutta Joukowski's theorem and generation of lift. D' Alembert Paradox and Magnus effects.	<b>10 Hours</b> <b>L3</b>
<b>Module 3</b> <b>INCOMPRESSIBLE FLOW OVER AIRFOILS:</b> Blasius theorem, Kutta condition, Airfoils Nomenclature and NACA series, Airfoil Characteristics, Stall condition and Flow separation. Vortex sheet, Kelvin Circulation theorem and the Starting Vortex. Classical Thin airfoil	<b>10 Hours</b> <b>L3</b>

theory: The Symmetrical airfoil and its applications.	
<p style="text-align: center;"><b>Module 4</b></p> <p><b>INCOMPRESSIBLE FLOW OVER FINITE WING:</b> Introduction to Finite wing, Downwash and Induced Drag, Vortex Filament, the Biot -Savart law and Helmholtz's theorems, Horseshoe vortex, Prandtl's Classical Lifting line theory and its limitations, Elliptical lift distribution.</p>	<p><b>10 Hours</b></p> <p><b>L3</b></p>
<p style="text-align: center;"><b>Module 5</b></p> <p><b>VISCOUS FLOW:</b> Boundary layer, Laminar &amp; Turbulent layer, Boundary layer Thickness, Displacement Thickness, Momentum Thickness, Energy Thickness, Boundary layer equation for a steady, two-dimensional incompressible flow, Boundary layer growth over a Flat Plate, Blasius Solution.</p>	<p><b>10 Hours</b></p> <p><b>L3</b></p>

### Laboratory Exercises

#### LIST OF EXPERIMENTS

1	Wind tunnels and its Specifications
2	Calibration of a Low Subsonic Speed Wind Tunnel
3	Smoke flow visualization on a Two-Dimensional Circular Cylinder At various air Speeds
4	Smoke flow visualization studies on a two-dimensional symmetric airfoil at different angle of incidence
5	Smoke flow visualization studies on a two-dimensional cambered airfoil at different angle of incidence
6	Tuft flow visualization studies on a two-dimensional airfoil at different angle of incidence at low speeds
7	Surface pressure distributions on a two-dimensional smooth circular cylinder at low speeds and calculation of pressure drag
8	Surface pressure distributions on a two-dimensional symmetric airfoil at low speeds and calculation of pressure drag
9	Surface pressure distributions on a two-dimensional cambered airfoil at various angles of attack and calculation of pressure drag
10	Calculation of total drag of a two-dimensional circular cylinder at low speeds using pitot-static probe wake survey
11	Calculation of Total drag of a three-dimensional rough circular cylinder/sphere at low speeds using pitot-static probe wake survey
12	Calculation of Total drag of a two-dimensional symmetrical airfoil at low speeds using pitot-static probe wake survey
13	Measurement of a typical boundary layer velocity profile on the tunnel wall (at low speeds) using a pitot probe and calculation of boundary layer displacement and momentum thickness
14	Calculation of aerodynamic coefficients and forces acting on a model aircraft using 6 –component force balance at various angles of incidence and speed

*Bin*

## COURSE OUTCOMES:

**Upon completion of this course, student will be able to:**

<b>CO42.1</b>	Apply the Fundamental Conservative Principles of Nature to Obtain the Governing Equations in Fluid Flows.
<b>CO42.2</b>	Calculate the Basic Flow Properties of 2 - D geometries by using Potential flow theory and Superposition Principles.
<b>CO42.3</b>	Determine the Aerodynamic force and Moment coefficients using Thin airfoil theory.
<b>CO42.4</b>	Analyze the Lift and Drag Forces of a Finite wing using Lifting Line Theory.
<b>CO42.5</b>	Understand the Transport Properties of fluid due to Viscosity, Thermal Conductivity and Mass Diffusivity.

### **Textbooks:**

2. **Ethirajan Radhakrishnan**, "Theoretical Aerodynamics", 1st Edition, Wiley Publications, 2013.

## **Scheme of Examination:**

### **Semester End Examination (SEE):**

**SEE Question paper is to be set for 100 marks and the marks scored will be proportionately reduced to 50.** There will be two full questions (with a maximum of four sub questions) from each module carrying 20 marks each. Students are required to answer any **five full questions** choosing at least **one full question from each module.**

### **Continuous Internal Evaluation (CIE):**

Two Tests are to be conducted for **40 marks each.** Marks scored in each test is reduced to 30 and added to test component.

CIE is executed by way of Three tests.

Laboratory CIE is conducted for 20 Marks and Added to CIE component

**Table 1: Distribution of weightage for CIE & SEE of Regular courses**

## SEMESTER – IV

### COURSE: AIRCRAFT PROPULSION

Course Code	22ANE43	CIE Marks	50
Hours/Week (L: T: P)	3:0:0	SEE Marks	50
No. of Credits	3	Examination Hours	03

**Course Learning Objectives:** To enable students to apply the knowledge of Aircraft Propulsion in broad domain of Aeronautical Engineering by making them to learn:

<b>CLO1</b>	Basic knowledge on the classifications of aircraft engines, their operations, fundamental components and their functions in engines.
<b>CLO2</b>	The functions of inlets and nozzles for subsonic and supersonic flow regimes.
<b>CLO3</b>	The basic operation of compressors, their types, the design of compressor blades, and their performance characteristics.
<b>CLO4</b>	The process of combustion, types of combustion chambers, and their respective applications
<b>CLO5</b>	To understand the turbine, their limitations, design of turbine blades, their performance and cooling methods.

CONTENT	No. of Hrs /RBT Levels
<b>MODULE-1</b>	
<b>FUNDAMENTALS OF AIR BREATHING ENGINES</b> Classification of aircraft power plants, Principles of aircraft propulsion, working of gas turbine engines, Thermodynamic cycle analysis, thrust equation, Factors affecting thrust, Methods of thrust augmentation, Performance characteristics of gas turbine engines and their comparisons, Numerical Problems	<b>8 Hours</b> <b>L1, L2</b>
<b>MODULE-2</b>	
<b>INLETS AND NOZZLES</b> Internal flow and Stall in Subsonic inlets, Boundary layer separation, Major features of external flow near a subsonic inlet, Diffuser performance. Supersonic inlets: Supersonic inlets, starting problem in supersonic inlets, Shock swallowing by area variation, External deceleration, Modes of inlet operation, Numerical Problems Nozzles: Theory of flow in isentropic nozzles, Convergent nozzles, Convergent Divergent nozzle, nozzle choking, Nozzle throat conditions, Nozzle efficiency, Losses in nozzles. Over-expanded and under-expanded nozzles, Ejector and variable area nozzles, thrust reversal, Thrust Vectoring, Numerical Problems	<b>10 Hours</b> <b>L2, L3</b>
<b>MODULE-3</b>	
<b>COMPRESSORS</b> Centrifugal compressors: Operation of centrifugal compressors, Work done and pressure rise, Velocity diagrams, Diffuser vane design considerations, performance characteristics. Axial flow compressors: Elementary theory of axial flow compressor, Velocity triangles, Degree of reaction, Compressor blade design, Axial compressor performance characteristics, Numerical Problems	<b>8 Hours</b> <b>L2, L3</b>

<b>MODULE-4</b>	
<b>COMBUSTION CHAMBERS</b> Classification of combustion chambers, Combustion process, Important factors affecting combustion chamber design, Combustion chamber performance, Effect of operating variables on performance – Flame tube cooling – Flame stabilization – Use of flame holders	<b>8 Hours</b> <b>L2, L3</b>
<b>MODULE-5</b>	
<b>TURBINES</b> Turbine stage, multi-staging of turbine, Principle of operation of axial flow turbines, Work done and pressure rise, Velocity diagrams, Degree of reaction, Stage efficiency calculations, Basic blade profile design considerations, Turbine blade cooling methods, Matching of compressor and turbine, Numerical Problems	<b>8 Hours</b> <b>L2, L3</b>

### **COURSE OUTCOMES:**

**Upon completion of this course, student will be able to:**

CO1	Explicate the principles of operation of aircraft propulsion and the fundamental components and their functions in engines.
CO2	Realize the functions of the aircraft inlet and nozzle, their advantages and limitations.
CO3	Assess the compressor's efficiency based on the blade design and the pressure requirements.
CO4	Examine the processes of combustion and combustor and choose the suitable chamber based on their applications.
CO5	Design the turbine stage and turbine blade angles based on the requirements of the compressor.

**Scheme of Examination:**

**Semester End Examination (SEE):**

**SEE Question paper is to be set for 100 marks and the marks scored will be proportionately reduced to 50.** There will be two full questions (with a maximum of four sub questions) from each module carrying 20 marks each. Students are required to answer any **five full questions** choosing at least **one full question from each module.**

**Continuous Internal Evaluation (CIE):**

Three Tests are to be conducted for **40 marks each**. CIE is executed by way of quizzes/ Alternate Assessment Tools (AATs) for 10 marks. Typical Evaluation pattern for regular courses is shown in Table 1.

Table1: Distribution of weightage for CIE & SEE of Regular courses

	Component	Marks	Total Marks
CIE	CIE Test-1	40	50
	CIE Test-2		
	CIE Test-3		
	Quiz 1/AAT	10	
SEE	Semester End Examination	50	50

## SEMESTER – IV

### COURSE: AIRCRAFT STRUCTURES-I

<b>Course Code</b>	<b>22ANE44</b>	<b>CIE Marks</b>	<b>50</b>
<b>Hours/Week (L: T: P)</b>	<b>2:2:0</b>	<b>SEE Marks</b>	<b>50</b>
<b>No. of Credits</b>	<b>3</b>	<b>Examination Hours</b>	<b>03</b>

**Course Objectives:** To enable students to apply the knowledge of Aircraft Structures-I in broad domain of Aeronautical Engineering by making them to learn:

<b>CO1</b>	Understand the types of loads experienced by aircraft structure and materials used for aircraft structures
<b>CO2</b>	Acquire knowledge on different methodologies to analyze statically determinate and indeterminate structures under various loading conditions
<b>CO3</b>	Apply the energy method concept to determine the strain energy using various methods
<b>CO4</b>	Discuss about the theory of failure for aircraft structures
<b>CO5</b>	Solve aircraft structural problems by applying the concepts of theory of elasticity

<b>Content</b>	<b>No. of Hours/ RBT levels</b>
<b>Module 1</b>	
<b>Introduction to Aircraft Structures:</b> Structural layout of the Airplane and components, loads acting on major components such as wing, fuselage, tails, landing gear etc. V-n diagram, Concept of allowable stress and margin of safety. Types of loads – load factor – Aerodynamics loads –Symmetric manoeuvre loads –Aircraft Materials.	<b>08 Hours L3</b>
<b>Module 2</b>	
<b>Statically Determinate &amp; Indeterminate Structures :</b> Plane truss analysis – method of joints – method of sections – method of shear – 3-D trusses – principle of super position, Clapeyron’s 3 moment equation and moment distribution method for indeterminate beams	<b>08 Hours L3</b>
<b>Module 3</b>	
<b>Energy Methods:</b> Strain Energy in axial, bending, torsion and shear loadings. Castigliano’s theorems and their applications. Energy theorems – dummy load & unit load methods – energy methods applied to statically determinate and indeterminate beams, frames, rings & trusses.	<b>08 Hours L3</b>
<b>Module 4</b>	
<b>Failure Theories:</b> Ductile and brittle materials – maximum principal stress theory - maximum principal strain theory - maximum shear stress theory - distortion energy theory – octahedral shear stress theory	<b>08 Hours L3</b>

<b>Module 5</b>	<b>08 Hours</b> <b>L3</b>
<b>Theory Of Elasticity:</b> Concept of stress and strain, derivation of Equilibrium equations, strain displacement relation, compatibility conditions and boundary conditions. Plane stress and Plane strain problems in 2D elasticity. structural health monitoring of aircraft.	

### **COURSE OUTCOMES:**

**Upon completion of this course, student will be able to:**

<b>CO44.1</b>	comprehensive understanding of aircraft structures, encompassing topics such as structural layout, major components, loads
<b>CO44.2</b>	Proficiently apply different methodologies to analyze statically determinate and indeterminate structures under various loading conditions
<b>CO44.3</b>	Apply strain energy principles in diverse loadings and effectively utilize Castigliano's theorems and its applications
<b>CO44.4</b>	Apply advanced material theories for optimal material selection and structural design under varying loading conditions.
<b>CO44.5</b>	Solve aircraft structural problems by applying the concepts of theory of elasticity.

### **Textbooks:**

1. 'Mechanics of Materials' by James M. Gere & Barry J Goodno, cengage Learning Custom Publishing; 8th edition, 2012.
2. Megson T M G, 'Aircraft Structures for Engineering students' Butterworth-Heinemann publisher, 5th edition, 2012.
3. N.C. Pandya, C.S. Shah, "Elements of Machine Design", Charotar Publishing House, 15th edition, 2009.

## SEMESTER – IV

### COURSE: ADVANCED DRONE TECHNOLOGY

<b>Course Code</b>	<b>22ANE45</b>	<b>CIE Marks</b>	<b>50</b>
<b>Hours/Week (L: T: P)</b>	<b>3:0:1</b>	<b>SEE Marks</b>	<b>50</b>
<b>No. of Credits</b>	<b>3</b>	<b>Examination Hours</b>	<b>03</b>

**Course Objectives:** To enable students to understand the drone and its functioning

<b>CLO1</b>	Understanding Drone Aerodynamics to make a model glider.
<b>CLO2</b>	Arrange together and using remote control parts for drones.
<b>CLO3</b>	Learn how to check and fix drones to make sure they work right.
<b>CLO4</b>	Build and program drones while following the rules for flying them

<b>Content</b>	<b>No. of Hours / RBT levels</b>
<b>Module 1</b>  <b>Drone Aerodynamics</b> Drone Basics & Applications, Drone Forces & Axis - Multirotor & Fixed Wing, Static, Dynamic Stability, Drag Types, Lift Generation, NACA, Wing & Tail Configuration, Winglets, Aspect Ratio, CG/AD Points, Load Factor, Controls, Gliding. Design & Fabrication of Own Model Glider, Wing & Tail design, Testing	<b>8 Hours</b> <b>L3, L4</b>
<b>Module 2</b>  <b>RC Avionics introduction &amp; assembling:</b> RC Avionics, Fixed wing/Multi rotor Avionic Components Demonstration; BLDC Motor -Stator/Rotor, Permanent /Electro Magnet, KV & Series; ESC/BEC, Power Module, PWD, Gyro, Servo Motors, Flight Controller, GPS, Telemetry System, GCS; Transmitter & Receiver - Control	<b>10 Hours</b> <b>L3, L4</b>
<b>Module 3</b>  <b>Drone Testing:</b> Practical Testing - Thrust Checking, CG Balancing, Roll Balancing, Propeller Balancing, Weight Estimation, Laser Vibration Checking, Speed/Velocity Checking, Servo Motor Controls Testing & Trimming, Lipo Testing & Balancing.	<b>10 Hours</b> <b>L3, L4</b>
<b>Module 4</b>  <b>Drone Assembling &amp; Programming:</b> Drone Frame Configurations, Frame Materials, Drone Assembling, Flight Controller Programming (KK 2.1) - Calibration, PI Gain, Receiver Test, Self-Level Testing, Gyro, resetting; Autonomous Systems, Drone Intelligent Modes, DGCA Rules & Regulations; DGCA Norms - UIN, Type Certificate, RPTO, Zones	<b>10 Hours</b> <b>L3, L4</b>

<b>Module 5</b>	
<b>FPV Systems &amp; Drone Sensors:</b> FPV Camera System, FPV Transmitter & Receiver, FPV goggles, Gimbal Control System, Drone Image Data Processing, GIS, RGB/Photogrammetry Camera for Mapping, Drone Application Sensors, Demonstration & Assembling - Camera Systems, Advanced Drones Image Processing.	<b>8 Hours</b> <b>L1, L2</b>

**COURSE OUTCOMES:**

**Upon completion of this course, student will be able to:**

<b>CO1</b>	Construct a working model glider by applying your understanding of how drones fly. <b>(L3)</b>
<b>CO2</b>	Demonstrate proficiency in configuring and operating remote control parts for drones. <b>(L2)</b>
<b>CO3</b>	Experiment with drones to ensure safe and effective operation. <b>(L3)</b>
<b>CO4</b>	Apply programming skills to drones and comply with regulations for their operation. <b>(L3)</b>
<b>CO5</b>	Comprehend the fundamentals of FPV systems and camera utilization for data capture. <b>(L2)</b>

**Textbooks:**

## SEMESTER – IV

### COURSE: COMPUTER AIDED AIRCRAFT DRAWING LAB

<b>Course Code</b>	<b>20ANEL46</b>	<b>CIE Marks</b>	<b>50</b>
<b>Hours/Week (L: T: P)</b>	<b>0: 0: 2</b>	<b>SEE Marks</b>	<b>50</b>
<b>No. of Credits</b>	<b>1</b>	<b>Examination Hours</b>	<b>03</b>

**Prerequisites:** Computer Aided Engineering Drawing.

**Course Objectives:** Students will be able to,

<b>CLO1</b>	Acquire the knowledge of basic commands and tools using CATIA software and produce drawings using orthographic projections.
<b>CLO2</b>	Draw the 3D part Model from the 2D sketches using CATIA software.
<b>CLO3</b>	Develop Part Models and create assembly using CATIA software.
<b>CLO4</b>	Convert Assembly drawing into 2D drafting and generate Bill of materials for assembled drawing.
<b>CLO5</b>	Create exploded views, rendering using CATIA.

Content	RBT levels
<b>PART-A</b>	
<b>INTRODUCTION TO PART DRAWING:</b> Conversion of 2D aeronautical components to 3D parts and sectional views of simple aeronautical components (Detailed 2D part drawings will be given).	<b>L3</b>
<b>ASSEMBLY DESIGN</b> <ol style="list-style-type: none"> <li>1. CATIA Assembly</li> <li>2. Assembly Relationships</li> <li>3. The Assemble commands and features</li> </ol> <b>Introduction to assembly drawing:</b> <ul style="list-style-type: none"> <li>➤ Assembly of propeller and hub assembly,</li> <li>➤ Wing assembly,</li> <li>➤ Fuselage assembly,</li> <li>➤ Engine mounts assembly,</li> <li>➤ Landing gear assembly.</li> </ul> Detailed 2D part drawings will be given). Student to complete at least three of the assembly drawings.	<b>L6</b>
<b>PART B</b>	
<b>DRAFTING:</b> <ol style="list-style-type: none"> <li>1. Creating detailed drawings</li> <li>2. Drawing creation</li> <li>3. Dimensions, Annotations and Parts Lists</li> <li>4. Detailing a drawing</li> <li>5. Bill of Materials</li> <li>6. Exploded View and rendering</li> </ol> <b>Conversion of Assembled view to 2D drafting.</b>	<b>L6</b>

**COURSE OUTCOMES:**

Upon completion of this course, student will be able to:

<b>CO1</b>	Sketch the orthographic views of machine components from pictorial view.
<b>CO2</b>	Develop 3D model of machine parts with the knowledge of Modelling Commands.
<b>CO3</b>	Build 3D geometric model of assembly by reading the blueprint of each part.
<b>CO4</b>	Convert assembled 3D model to 2D drafting, Bill of Materials and of components using CAD software.
<b>CO5</b>	Represent an Exploded view and rendering Environment.

**Textbooks:**

## SEMESTER – IV

### COURSE: ABILITY ENHANCEMENT COURSE-SYSTEMS ENGINEERING FOR AERONAUTICAL ENGINEERS

Course Code	:	22ANE47		CIE	:	50Marks
Credits: L:T:P	:	2:0:0		SEE	:	50 Marks
Number of credits	:	2		SEE Duration	:	3.00 Hours
<b>Course Learning Objectives:</b>						
1.	Understand the Life Cycle of Systems.					
2.	Explain the role of Stake holders and their needs in organizational systems.					
3.	Develop and Document the knowledge base for effective systems engineering processes.					
4.	Apply available tools, methods and technologies to support complex high technology systems.					
5.	Create the frameworks for quality processes to ensure high reliability of systems.					

<b>UNIT-I</b>	<b>06 Hrs</b>
<p><b>System Engineering and the World of Systems:</b> What is System Engineering? Origins of System Engineering, Examples of Systems Requiring Systems Engineering, System Engineering viewpoint, Systems Engineering as a Profession, The power of Systems Engineering, problems.</p> <p><b>Structure of Complex Systems:</b> System building blocks and interfaces, Hierarchy of Complex systems, System building blocks, The system environment, Interfaces and Interactions.</p> <p><b>The System Development Process:</b> Systems Engineering through the system Life Cycle, Evolutionary Characteristics of the development process, The system engineering method, Testing throughout system development, problems. Introduction to V Model, Model Based Systems Engineering.</p>	
<b>UNIT – II</b>	<b>10 Hrs</b>
<p><b>Systems Engineering Management:</b> Managing systems development and risks, Work breakdown structure (WBS), System Engineering Management Plan (SEMP), Risk Management, Organization of Systems Engineering, Systems Engineering Capability Maturity Assessment, Systems Engineering standards, Problem. Originating a new system, Functional analysis, Feasibility analysis, Feasibility definition, Needs validation, System operational requirements, problems.</p> <p><b>Concept Exploration:</b> Developing the system requirements, Operational requirements analysis, Performance requirements formulation, Implementation concept exploration, Design of Experiments, Modeling &amp; Simulation, Performance requirements validation, problems.</p>	
<b>UNIT – III</b>	<b>10 Hrs</b>
<p><b>Concept Definition:</b> Selecting the system concept, Performance requirements analysis, Functional analysis and formulation, Concept selection, Concept validation, System Development planning, System Functional Specifications, problems</p> <p><b>Advanced Development:</b> Reducing program risks, functional Safety risks, Requirements analysis, Functional Analysis and Design, Prototype development, Development testing, Risk reduction, Introduction to Safety Critical System Design – SAE ARP 4754, RTCA DO-178 Standards. problems.</p>	
<b>UNIT – IV</b>	<b>07</b>

	<b>Hrs</b>
<p><b>Engineering Design :</b> Implementing the System Building blocks, requirements analysis, Requirement flow at subsystem and component level, Functional breakdown, Detailed design - Functional analysis and design, Component design, Design validation, Configuration Management, problems.</p> <p><b>System Integration and Evaluation:</b> Integrating, Testing and evaluating the total system, Test planning and preparation, System integration, Developmental system testing, and problems.</p>	
<b>UNIT – V</b>	<b>06 Hrs</b>
<p><b>Production:</b> Introduction to DFX (DFM, DFR, DFC, DFT etc), Systems Engineering in the factory, Engineering for production, Transition from development to production, Production operations, Acquiring a production knowledge base, problems.</p>	

<b>Course Outcomes: After completing the course, the students will be able to</b>	
<b>CO1</b>	Understand the Life Cycle of Systems.
<b>CO2</b>	Explain the role of Stake holders and their needs in organizational systems.
<b>CO3</b>	Develop and Document the knowledge base for effective systems engineering processes.
<b>CO4</b>	Apply available tools, methods and technologies to support complex high technology systems.
<b>CO5</b>	Create the frameworks for quality processes to ensure high reliability of systems.

## V SEMESTER SYLLABUS

## SEMESTER -V

### COURSE: MANAGEMENT AND ECONOMICS

Course Code	22ANE51	CIE Marks	50
Hours/Week (L: T: P)	2:2:0	SEE Marks	50
No. of Credits	3	Examination Hours	03

**Pre-requisite:** Nil

**Course Objectives:** To enable students to apply the knowledge of management and economics in broad domain of Aeronautical Engineering by making them to learn:

<b>CLO1</b>	Study needs, functions, roles, scope and evolution of Management
<b>CLO2</b>	Learn importance, purpose of Planning and hierarchy of planning
<b>CLO3</b>	Discuss Decision making, Organizing, Staffing, Directing and Controlling

Content	No. of Hours/RBT levels
<b>Module 1</b>	
<p><b>Management:</b> Introduction - Meaning - nature and characteristics of Management, Scope and Functional areas of management - Management as a science, art of profession - Management &amp; Administration - Roles of Management, Levels of Management, Development of Management Thought - early management approaches – Modern management approaches.</p> <p><b>Planning:</b> Nature, importance and purpose of planning process Objectives - Types of plans (Meaning Only) - Decision making Importance of planning - steps in planning &amp; planning premises - Hierarchy of plans.</p>	<b>08 Hours / L2</b>
<b>Module 2</b>	
<p><b>Organizing and Staffing:</b> Nature and purpose of organization Principles of organization - Types of organization - Departmentation Committees-Centralization Vs Decentralization of authority and responsibility - Span of control - MBO and MBE (Meaning Only) Nature and importance of staffing- -: Process of Selection &amp; Recruitment (in brief).</p> <p><b>Directing &amp; Controlling:</b> Meaning and nature of directing Leadership styles, Motivation Theories, Communication - Meaning and importance - coordination, meaning and importance and Techniques of Co Ordination. Meaning and steps in controlling - Essentials of a sound control system - Methods of establishing control (in brief)</p>	<b>08 Hours / L2</b>
<b>Module 3</b>	
<p><b>Introduction to Engineering and economics:</b> Problem solving and decision making, Laws of demand and supply, Difference between Microeconomics &amp; Macroeconomics, equilibrium between demand &amp; supply, elasticity of demand, price elasticity, income elasticity. Law of Returns, Interest and interest factors, simple and compound interest, Cash flow diagrams, personal loans and EMI payment calculation with flexible interest rates, Discussion and problems</p>	<b>08 Hours / L2</b>

<b>Module 4</b>	<b>08 Hours / L2</b>
<p><b>Present, future and annual worth and rate of returns:</b> Basic present worth comparisons, Present worth-equivalence, Assets with unequal lives and infinites lives, future worth comparisons, payback comparisons, Equivalent annual worth comparisons, situations for annual worth comparisons.</p> <p>Asset life, Rate of return, minimum acceptable rate of return, IRR anomalies and misconceptions, Cost of capital, comparisons of all present future and annual worth with IRR, product costing, Discussions and problems</p>	
<b>Module 5</b>	<b>08 Hours / L2</b>
<p><b>Costing and depreciation:</b> Components of costs, estimation of selling price, marginal cost, first cost, all kinds of overheads, indirect cost estimation with depreciation, mensuration and estimation of material cost, cost estimation of mechanical process, idling time.</p> <p>Product costing (approaches to product costing), causes of depreciation, methods of computing depreciation charges, straight line method, declining balance method, sum of years method, sinking fund method, service output methods, taxation concepts, personal income taxes and corporate taxes, Discussions and problems.</p>	

**COURSE OUTCOMES:**

**Upon completion of this course, student will be able to:**

<b>CO51.1</b>	Understand needs, functions, roles, scope and evolution of Management
<b>CO51.2</b>	Understand importance, purpose of Planning and hierarchy of planning and also analyze its types
<b>CO51.3</b>	Enumerate Decision making, Organizing, Staffing, Directing and Controlling
<b>CO51.4</b>	Select the best economic model from various available alternatives
<b>CO51.5</b>	Understand various interest rate methods and implement the suitable one.

**Textbooks:**

1. Principles of Management by Tripathy and Reddy
2. Mechanical estimation and costing, T.R. Banga & S.C. Sharma, 17th edition 2015
3. Engineering Economy, Riggs J.L. McGraw Hill, 2002

**Reference books:**

1. Management Fundamentals - Concepts, Application, Skill Development - Robers Lusier - Thomson
2. Basics of Engineering Economy, Leland Blank & Anthony Tarquin, McGraw Hill Publication (India) Private Limited
3. Economics: Principles of Economics, N Gregory Mankiw, Cengage Learning

**Scheme of Examination:**

**Semester End Examination (SEE):**

**SEE Question paper is to be set for 100 marks and the marks scored will be proportionately reduced to 50.** There will be two full questions (with a maximum of four sub questions) from each module carrying 20 marks each. Students are required to answer any **five full questions** choosing at least **one full question from each module.**

**Continuous Internal Evaluation (CIE):**

Three Tests are to be conducted for **40 marks each.** CIE is executed by way of quizzes / Alternate Assessment Tools (AATs) for 10 marks

**Table 1: Distribution of weightage for CIE & SEE of Regular courses**

	Component	Marks	Total Marks

## SEMESTER V

### COURSE: HIGH SPEED AERODYNAMICS

Course Code	22ANE52	CIE Marks	50
Hours/Week (L: T: P)	3:0:2	SEE Marks	50
No. of Credits	4	Examination Hours	03

**Pre requisite: Aerodynamics I**

**Course Learning Objectives:** To enable students to apply the knowledge of Aerodynamics in broad domain of Aeronautical Engineering by making them to learn:

<b>CLO1</b>	To Introduce the Concepts of compressibility
<b>CLO2</b>	To make the student understand the theory behind the formation of Shocks and Expansion waves in supersonic flows.
<b>CLO3</b>	To know the calculations of flow properties across oblique shock wave
<b>CLO4</b>	To linearization of governing equations using small perturbation theory
<b>CLO5</b>	To understand the transonic flow over wing bodies

Content	No. of Hours/ RBT levels
<b>Module 1</b> <b>ONE DIMENSIONAL COMPRESSIBLE FLOW:</b> Review of Thermodynamics and State Equations, Compressibility, Velocity of Sound, Adiabatic Steady-State flow Equations, Flow-through Convergent-Divergent Passage.	<b>10 Hours/ L3</b>
<b>Module 2</b> <b>NORMAL SHOCK WAVES:</b> Alternative form of the One-dimensional Energy Equation, Prandtl Meyer Equation and Rankine – Hugoniot Relation, Normal Shock Equations, Velocity measurements in Subsonic and Supersonic flows, Pitot Static Tube, Rayleigh and Fanno Flow.	<b>10 Hours/ L3</b>
<b>Module 3</b> <b>OBLIQUE SHOCK WAVE EXPANSION WAVES:</b> Oblique Shocks and Corresponding Equations, Flow past wedges and concave corners, Flow past Convex corners, Strong & weak Shocks, Attached & Detached Shocks. Reflection, and Interaction of Shocks, Expansion waves.	<b>10 Hours/ L3</b>
<b>Module 4</b> <b>LINEARIZED FLOW:</b> Velocity Potential equation, Small Perturbation Potential Theory, Linearized Subsonic and Supersonic Pressure Co-efficient, Mach waves and Mach angles, Prandtl - Glauert compressibility Correction.	<b>10 Hours/ L3</b>

<b>Module 5</b>	<b>10 Hours/ L3</b>
<b>TRANSONIC FLOW OVER WING:</b> Lower and upper Critical Mach numbers, Lift and Drag Divergence Mach number, Shock induced separation, Characteristics of Swept wings, Transonic Area rule. Introduction to Hypersonic Aerodynamics.	

### Laboratory Exercise

### List of Experiments

1	Calibration of Supersonic Wind Tunnel at different Mach Number.
2	Shock Wave analysis on Aero Spike Model.
3	Oblique Shock Wave analysis on a 2D Wedge.
4	Supersonic Flow analysis over a 3D Cone structure.
5	Bow Shock Wave analysis over a Hemispherical Model.
6	Supersonic flow analysis over a Double wedge.
7	Flow Visualization of Under Expanded Nozzle.
8	Schlieren image Visualization of Over Expanded Nozzle.
9	Stagnation Pressure Measurement for Optimized Nozzle.
10	Study of Shock Wave Boundary Layer Interaction.

### COURSE OUTCOMES:

Upon completion of this course, student will be able to:

CO52.1	Calculate the Thermodynamic state variables in Compressible Flow.
CO52.2	Estimate the flow Properties across Normal Shock Waves.
CO52.3	Evaluate and Analyze the flow Properties across Oblique Shock Waves
CO52.4	Understand the Linearization of the governing equations in compressible flow.
CO52.5	Predict the flow Properties of Transonic and Hypersonic flows.

### Textbooks:

## SEMESTER – V

### COURSE: FINITE ELEMENT METHODS

Course Code	22ANE53	CIE Marks	50
Hours/Week (L: T: P)	3:0:0	SEE Marks	50
No. of Credits	3	Examination Hours	03

**Pre-requisite:** Aircraft Structures

**Course Learning Objectives:** To enable students to apply the knowledge of finite element methods in broad domain of aeronautical engineering by making them to learn:

<b>CLO1</b>	To give exposure to various methods of solution, in particular the finite element method.
<b>CLO2</b>	To expose the student to a wide variety of problems involving discrete and continuum elements
<b>CLO3</b>	To impart knowledge in the basic theory of finite element formulation
<b>CLO4</b>	To allow the student to learn and understanding how element characteristic matrices are generated
<b>CLO5</b>	To impart knowledge in assembly of finite element equations and solve for the unknowns.

Content	No. of Hours/ RBT levels
<b>Module 1: INTRODUCTION TO FEM</b> Introduction to FEM, FDM and FVM, Review of various approximate methods – Raleigh Ritz's, Galerkin and finite difference methods Governing equation and convergence criteria of finite element method.	<b>08 Hours/ L3</b>
<b>Module 2: DISCRETE ELEMENTS</b> Bar elements, uniform sections, mechanical and thermal loading, varying sections, truss analysis. Beam element with various loadings and boundary conditions - longitudinal and lateral vibration. Use of local and natural coordinates.	<b>10 Hours/ L3</b>
<b>Module 3: CONTINUUM ELEMENTS</b> Plane stress, Plane strain and axisymmetric problems, constant and linear strain triangular elements, stiffness matrix, axisymmetric load vector, shape functions of Hexahedron and tetrahedron (3D Elements)	<b>08 Hours/ L3</b>
<b>Module 4: ISOPARAMETRIC ELEMENTS</b> Definitions, Shape function for 4, 8 and 9 nodal quadrilateral elements, Stiffness matrix and consistent load vector, Gaussian integration.	<b>08 Hours/ L3</b>
<b>Module 5: FIELD PROBLEM</b> Heat transfer problems, Steady state fin problems, Derivation of element matrices for two dimensional problems, Torsion problems.	<b>08 Hours/ L3</b>

## LIST OF EXPERIMENTS

1. Structural modeling and analysis of simply supported beam with central point load.
2. Structural modeling and analysis of cantilever beam with point loading
3. Structural modeling and analysis of simply supported beam with uniformly varying load.
4. Structural modeling and analysis of aircraft landing gear strut
5. Structural modeling and analysis of circular and rectangular cutout sections.
6. Structural modeling of sandwich beam of rectangular cross-section and analyses for stresses.
7. Structural modeling of a three-dimensional wing.
8. Structural modeling and stress analysis of a fuselage bulkhead.
9. Structural modeling and stress analysis of a simply supported rectangular plate uniformly compressed in one direction.
10. Structural modeling and stress analysis of a simply supported rectangular plate uniformly compressed in one direction with a cut- out in center.

## COURSE OUTCOMES:

**Upon completion of this course, student will be able to:**

<b>CO62.1</b>	Understand the approximate methods used for solving structural mechanics problems and formulation of governing equation for the finite element method
<b>CO62.2</b>	Solve 1-D problems related to static analysis of structural members
<b>CO62.3</b>	Formulate the elemental matrices for 2-D problems.
<b>CO62.4</b>	Exposure to iso-parametric element formulations and importance of numerical integration.
<b>CO62.5</b>	Solve Eigen value problems and scalar field problems.

## SEMESTER -V

### COURSE: AEROSPACE PROPULSION

<b>Course Code</b>	<b>22ANE54</b>	<b>CIE Marks</b>	<b>50</b>
<b>Hours/Week (L: T: P)</b>	<b>3:0:2</b>	<b>SEE Marks</b>	<b>50</b>
<b>No. of Credits</b>	<b>4</b>	<b>Examination Hours</b>	<b>03</b>

<b>CLO1</b>	The basic functions and challenges in design and development of ramjet and scramjet engines
<b>CLO2</b>	The classification and fundamentals of rocket propulsion and their systems
<b>CLO3</b>	The design and development of solid rocket propulsion and their applications
<b>CLO4</b>	The different types of liquid propellants, their merits and demerits. Development of hybrid rocket and their applications
<b>CLO5</b>	The elementary principles of electric rockets, their types, functions and future rocket engines

Course Learning Objectives: To enable students to apply the knowledge of Rocket Propulsion in broad domain of Aeronautical Engineering by making them to learn:

CONTENT	No. of Hrs /RBT Levels
<b>MODULE-1</b>	
<b>RAMJET AND SCRAMJET</b> Operating Principles of ramjet engine, ramjet components and their functions, modes of inlet operations, combustion in ramjet, design of ramjet, performance characteristics. Introduction to scramjet, need for supersonic combustion, problems associated with supersonic combustion salient features of scramjet engine and its applications, Numerical problems	<b>10Hours /L2</b>
<b>MODULE-2</b>	
<b>FUNDAMENTALS OF ROCKET PROPULSION</b> History of rocket engines, basic principles of rocket propulsion, types of rocket engines, applications of rocket, ideal rocket engine, thrust equation, rocket nozzle classifications, performance parameters, staging in rockets, Numerical problems	<b>8 Hours /L3</b>
<b>MODULE-3</b>	
<b>SOLID ROCKET PROPULSION</b> Solid propellant rocket, Selection criteria of solid propellants, burning rate of propellants, propellant grain design considerations, erosive burning, homogeneous propellants, heterogeneous propellants, igniters, types of igniters, Numerical problems	<b>8 Hours /L3</b>
<b>MODULE-4</b>	
<b>LIQUID ROCKET PROPULSION</b> Liquid propellant rocket, monopropellants, bipropellants, selection of liquid propellants, liquid fuels and oxidizers, types of feed systems for liquid rockets, thrust control in liquid rockets, cooling in liquid rockets, hybrid propulsion, limitations of hybrid propulsion, Numerical Problems	<b>8 Hours /L3</b>

<b>MODULE-5</b>	
<b>NON-CHEMICAL ROCKET ENGINE</b> Principles of electrical rocket engine, Classifications of electrical rockets, Electrothermal thrusters, Electrostatic thrusters, Electromagnetic thrusters, Nuclear rocket engines, Solar energy rockets, Numerical Problems	<b>8 Hours /L3</b>

### **COURSE OUTCOMES:**

Upon completion of this course, student will be able to:

<b>CO54.1</b>	Outline the functions and challenges in design and development of ramjet and scramjet engines
<b>CO54.2</b>	Develop and demonstrate a rocket propulsion and their systems
<b>CO54.3</b>	Build a solid rocket and to examine their propellants and thrust performance.
<b>CO54.4</b>	Categorize the liquid propellants based on their merits and demerits for a selected mission profile
<b>CO54.5</b>	Model and exhibit an opposite electric rocket system based the mission requirements

### **Textbooks:**

## SEMESTER V

### COURSE: ABILITY ENHANCEMENT COURSE-URBAN AIR MOBILITY

<b>Course Code</b>	<b>22ANE56</b>	<b>CIE Marks</b>	<b>50</b>
<b>Hours/Week (L: T: P)</b>	<b>2:0:0</b>	<b>SEE Marks</b>	<b>50</b>
<b>No. of Credits</b>	<b>2</b>	<b>Examination Hours</b>	<b>03</b>

**Course Objectives:** To enable students to apply the knowledge of Urban air mobility in broad domain of aeronautical engineering by making them to learn:

<b>CLO1</b>	To gain knowledge of Urban Air Mobility (UAM).
<b>CLO2</b>	Acquire in-depth knowledge about the classification and operational aspects of UAM vehicles
<b>CLO3</b>	Comprehend the evolving ecosystem and infrastructure developments required to support UAM.
<b>CLO4</b>	Gain an insight to the rules and regulations governing UAM and drones in India,
<b>CLO5</b>	Describe the process and importance of type certification for UAM vehicles

Content	No. of hr / RBT levels
<b>Module 1</b>	
<b>INTRODUCTION:</b> UAM, the evolving landscape of urban air mobility in india, UAM around the globe and its progress, enabling ecosystem for UAM in India, policy support	<b>03 Hours / L3</b>
<b>Module 2</b>	
<b>The Unmanned Aircraft System Rules, 2022</b> , Category - The unmanned aircraft are classified based on the maximum all up weight including its pay load, DGCA Guidelines for UAS, Operations of UAS, Drone Port	<b>03 Hours/ L2</b>
<b>Module 3</b>	
<b>VEHICLE TYPES</b> , Main Use Cases and Infrastructure, <b>UDAN-RCS Scheme of Government of India</b>	<b>03 Hours/ L3</b>
<b>Module 4</b>	
<b>UNMANNED AIRCRAFT SYSTEM(UAS)</b> , Drone Rules 2022, Amendment Rules 2022	<b>03 Hours/ L3</b>
<b>Module 5</b>	
<b>Digital sky platform</b> , type certificate, RPCS details, list of RPTOS, UIN details	<b>03 Hours/ L3</b>

#### COURSE OUTCOMES:

Upon completion of this course, student will be able to:

<b>CO56.1</b>	Understand UAM and its ecosystem in India
<b>CO56.2</b>	Acquire knowledge on the classification and operations of UAM
<b>CO56.3</b>	Comprehend the ecosystem and infrastructure developments for UAM
<b>CO56.4</b>	Appreciate the UAM and Drone rules and regulation

<b>CO56.5</b>	Describe the type certification for UAM

## SEMESTER -V

### COURSE: ENVIRONMENTAL SCIENCE

Course Code	22CIV57	CIE Marks	50
Hours/Week (L: T: P)	1:0:0	SEE Marks	50
No. of Credits	1	Examination Hours	01

#### Course Learning Objectives:

<b>CLO1</b>	The fundamentals of environmental science.
<b>CLO2</b>	The types of natural resources
<b>CLO3</b>	The various global environmental concerns.
<b>CLO4</b>	The types of wastes generated and their handling at a basic level
<b>CLO5</b>	The area of environmental law and policies with a few important acts in the field

CONTENT	No. of Hours/RBT levels
<b>Module 1</b>	
<b>Environment:</b> <ul style="list-style-type: none"> <li>• Definition, scope &amp; importance</li> <li>• Components of Environment Ecosystem: Structure and function of various types of ecosystems</li> <li>• Human Activities – Food, Shelter, and Economic &amp; Social Security.</li> <li>• Population - Growth, variation among nations – population explosion and impact on environment</li> </ul> Biodiversity: Types, Value, Hot spots, Threats and Conservation of biodiversity, Forest Wealth, and Deforestation.	<b>04 Hours / L2</b>
<b>Module 2</b>	
<b>Natural Resources:</b> Forest, Water, Mineral, Food, Energy, Land Environmental Pollution - Definition – causes, effects and control measures of: (a) Air pollution (b) Water pollution (c) Soil pollution (d) Marine pollution (e) Noise pollution (f) Thermal pollution (g) Nuclear hazards.	<b>04 Hours / L2</b>
<b>Module 3</b>	
<b>Global Environmental Concerns</b> (Concept, policies and case-studies): Ground water depletion/recharging, Climate Change; Acid Rain; Ozone Depletion; Radon and Fluoride problem in drinking water; Resettlement and rehabilitation of people, Environmental Toxicology.	<b>04 Hours / L2</b>
<b>Module 4</b>	
<b>Sources:</b> Sources of Solid waste, Types of solid waste, Physical and Chemical composition of municipal solid waste. Solid Waste Management Rules in India, Sources and management of E – Waste, Biomedical Waste, Hazardous waste, and construction waste at individual and community level. Socio-economic aspect of waste management Environmental Toxicology.	<b>04 Hours / L2</b>

*Biy*

<b>Module 5</b>	<b>04 Hours / L2</b>
<b>Latest Developments in Environmental Pollution Mitigation Tools</b> (Concept and Applications): Environment Impact Assessment, Environmental Management Systems, ISO14001; Environmental Stewardship, NGOs.	

**COURSE OUTCOMES:**

**Upon completion of this course, student will be able to:**

<b>CO57.1</b>	Understand holistically the key concepts “Environment”, and “Biodiversity”.
<b>CO57.2</b>	Classify the types of natural resources available and the effects of anthropogenic interventions.
<b>CO57.3</b>	Express the gravity of various global environmental concerns.
<b>CO57.4</b>	Categorize the types of wastes generated and their handling at a basic level.
<b>CO57.5</b>	Understand the importance of environmental law and policies.

**Textbooks:**

1. Environmental studies, Benny Joseph, Tata Mcgraw-Hill 2nd edition 2012
2. Environmental studies, S M Prakash, pristine publishing house, Mangalore 3rd edition-2018
3. Gilbert M.Masters, Introduction to Environmental Engineering and Science, 2nd edition, Pearson Education, 2004

## SEMESTER -V

### COURSE: UNIVERSAL HUMAN VALUES

Course Code	22UHV57	CIE Marks	50
Hours/Week (L: T: P)	1:0:0	SEE Marks	50
No. of Credits	1	Examination Hours	01

#### Course Objectives:

<b>CLO1</b>	To create an awareness on Engineering Ethics and Human Values.
<b>CLO2</b>	To understand social responsibility of an engineer.
<b>CLO3</b>	To appreciate ethical dilemma while discharging duties in professional life.

Content	No. of Hours
<p style="text-align: center;"><b>Module 1</b></p> <p><b>Introduction to Value Education</b></p> <ul style="list-style-type: none"><li>• Value Education, Definition, Concept and Need for Value Education.</li><li>• The Content and Process of Value Education.</li><li>• Basic Guidelines for Value Education,</li><li>• Self-exploration as a means of Value Education.</li><li>• Happiness and Prosperity as parts of Value Education.</li></ul>	<b>05 Hours</b>
<p style="text-align: center;"><b>Module 2</b></p> <p><b>Harmony in the Human Being</b></p> <ul style="list-style-type: none"><li>• Human Being is more than just the Body.</li><li>• Harmony of the Self ('I') with the Body.</li><li>• Understanding Myself as Co-existence of the Self and the Body.</li><li>• Understanding Needs of the Self and the needs of the Body.</li><li>• Understanding the activities in the Self and the activities in the Body.</li></ul>	<b>05 Hours</b>
<p style="text-align: center;"><b>Module 3</b></p> <p><b>Harmony in the Family and Society and Harmony in the Nature</b></p> <ul style="list-style-type: none"><li>• Family as a basic unit of Human Interaction and Values in Relationships.</li><li>• The Basics for Respect and today's Crisis: Affection, Guidance, Reverence, Glory, Gratitude and Love,</li><li>• Comprehensive Human Goal: The Five Dimensions of Human Endeavour.</li><li>• Harmony in Nature: The Four Orders in Nature.</li><li>• The Holistic Perception of Harmony in Existence.</li></ul>	<b>05 Hours</b>

*Bin*

<b>Module 4</b>	<b>05 Hours</b>
<b>Social Ethics</b> <ul style="list-style-type: none"> <li>• The Basics for Ethical Human Conduct, Defects in Ethical Human Conduct.</li> <li>• Holistic Alternative and Universal Order,</li> <li>• Universal Human Order and Ethical Conduct.</li> <li>• Human Rights violation and Social Disparities.</li> </ul>	
<b>Module 5</b>	<b>05 Hours</b>
<b>Professional Ethics</b> <ul style="list-style-type: none"> <li>• Value based Life and Profession., Professional Ethics and Right Understanding.</li> <li>• Competence in Professional Ethics.</li> <li>• Issues in Professional Ethics – The Current Scenario.</li> <li>• Vision for Holistic Technologies</li> <li>• Production System and Management Models.</li> </ul>	

### **COURSE OUTCOMES:**

**Upon completion of this course, student will be able to:**

<b>CO1</b>	Understand the significance of value inputs in a classroom and start applying them in their life and profession
<b>CO2</b>	Distinguish between values and skills, happiness and accumulation of physical facilities, the Self and the Body, Intention and Competence of an individual, etc.
<b>CO3</b>	Understand the role of a human being in ensuring harmony in society and nature.
<b>CO4</b>	Distinguish between ethical and unethical practices and start working out the strategies to actualize a harmonious environment wherever they work.

### **Textbooks:**

1. A.N Tripathy, New Age International Publishers, 2003.
2. Bajpai. B. L, New Royal Book Co, Lucknow, Reprinted, 2004
3. Bertrand Russell Human Society in Ethics & Politics

**SEMESTER -V  
PROGRAM ELECTIVE 1**

**COURSE: COMPOSITE MATERIALS AND STRUCTURES**

<b>Course Code</b>	<b>22ANE551</b>	<b>CIE Marks</b>	<b>50</b>
<b>Hours/Week (L: T: P)</b>	<b>2:2:0</b>	<b>SEE Marks</b>	<b>50</b>
<b>No. of Credits</b>	<b>3</b>	<b>Examination Hours</b>	<b>03</b>

**Pre-requisite:** Materials and Manufacturing Process **Course Objectives:** To enable students to apply the knowledge of Composite Materials and Structures in broad domain of Aeronautical Engineering by making them to learn:

<b>CLO1</b>	Understand the behavior of constituents in the composite materials and its applications
<b>CLO2</b>	Understand the various manufacturing processes of Composite materials
<b>CLO3</b>	Apply constitutive equations of composite materials and understand mechanical behavior at micro level.
<b>CLO4</b>	Evaluate the elastic stresses and strains in composites considering different laminate configurations
<b>CLO5</b>	Inspection & Quality Control, Applications of composites in different fields of engineering.

Content	No. of Hours/RBT levels
<b>Module 1</b>	
<p><b>Introduction to Composite Materials</b> Definition, classification of composite materials, classification of reinforcement - particulate, short fiber, whiskers, long fibers composites. matrix materials – metals, ceramics, polymers (including thermoplastics and thermosets), Carbon-Carbon Composites Metal.</p> <p><b>Matrix Composites:</b> MMC with particulate and short fiber reinforcement, liquid and solid-state processing of MMC – stir casting, squeeze casting. Properties of MMCs, Applications of Al, Mg, Ti based MMC.</p>	<b>08 Hours / L2</b>
<b>Module 2</b>	
<p><b>Processing of Polymer Matrix Composites:</b> Thermoset Polymers, Hand layup Process, Vacuum Bagging Process, Post Curing Process, Filament winding, Pultrusion, Autoclave Process, VARTM, resin film infusion.</p> <p><b>Processing of Polymer Matrix Composites:</b> Thermoplastic Polymers, Extrusion process, Injection Moulding Process, Thermo-forming process. Post Processing of Composites – Adhesive bonding, drilling, cutting processes</p>	<b>08 Hours / L2</b>
<b>Module 3</b>	
<p><b>Micromechanics:</b> Introduction – advantages and application of composite materials – types of reinforcements and matrices – micro mechanics – mechanics of materials approach, elasticity approach- bounding techniques – fiber volume ratio – mass fraction – density of composites. Effect of voids in composites.</p>	<b>08 Hours / L3</b>

<b>Module 4</b>	
<b>Macro mechanics:</b> Generalized Hooke's Law – elastic constants for anisotropic, orthotropic and isotropic materials – macro mechanics – stress-strain relations with respect to natural axis, arbitrary axis – determination of in plane strengths of a lamina – experimental characterization of lamina. <b>Failure Theory:</b> Tsai-Hill, Tsai-Wu, Max Stress and Max Strain	<b>10 Hours / L3</b>
<b>Module 5</b>	
<b>Inspection &amp; Quality Control:</b> Destructive & Non-Destructive Testing, Tensile, Compression, Flexural, Shear, Hardness; ultrasonic testing – A-B-C scan <b>Repairs of Composite Materials and Applications:</b> Automobile, Aircrafts, missiles, Space hardware, Electrical and electronics, marine, recreational and Sports equipment, future potential of composites.	<b>08 Hours / L3</b>

**COURSE OUTCOMES: Upon completion of this course, student will be able to:**

<b>CO551.1</b>	Understanding the mechanics of composite materials.
<b>CO551.2</b>	Understand the processing methods in composite materials.
<b>CO551.3</b>	Apply the characterization methods for various engineering materials.
<b>CO551.4</b>	Comprehend and apply theories of structures for engineering problems.
<b>CO551.5</b>	Understand the inspection techniques used for composite and various application of composite in different fields of engineering.

**Textbooks:**

1. K.K Chawla, Composite Materials- Science and Engineering, Springer Verlag, II edition,1998.
2. Autar Kaw, Mechanics of Composites, CRC Press, II edition,2006.

**Reference books:**

2. Ajay Kapadia, Non-Destructive Testing of Composite Materials, TWI Publications, 2006.
3. R M Jones, Mechanics of Composite Materials, Taylor & Francis, 2<sup>nd</sup> Edn,2015

**Scheme of Examination:**

**Semester End Examination (SEE):**

**SEE Question paper is to be set for 100 marks and the marks scored will be proportionately reduced to 50.** There will be two full questions (with a maximum of four sub questions) from each module carrying 20 marks each. Students are required to answer any **five full questions** choosing at least **one full question from each module.**

**Continuous Internal Evaluation (CIE):**

Three Tests are to be conducted for **40 marks each.** CIE is executed by way of quizzes / Alternate Assessment Tools (AATs) for 10 marks

**Table 1: Distribution of weightage for CIE & SEE of Regular courses**

**SEMESTER – V**  
**Program Elective -I**

**COURSE: AIR NAVIGATION**

<b>Course Code</b>	<b>22ANE552</b>	<b>CIE Marks</b>	<b>50</b>
<b>Hours/Week (L: T: P)</b>	<b>2:2:0</b>	<b>SEE Marks</b>	<b>50</b>
<b>No. of Credits</b>	<b>3</b>	<b>Examination Hours</b>	<b>03</b>

**COURSE LEARNING OBJECTIVES:** To enable students to apply the knowledge of air navigation in broad domain of aeronautical engineering by making them to learn:

<b>CLO1</b>	Study the basic principle of operation of Air Traffic Control Communication.
<b>CLO2</b>	Learn the concept to Navigate correctly to the destination
<b>CLO3</b>	Apply the knowledge of celestial navigation system to fix the location of object.

<b>Content</b>	<b>No. of Hours/ RBT levels</b>
<p><b>Module 1</b> <b>Basics of Navigation:</b> The solar system, The earth, Time and time conversions-apparent time, UTC, LMT, standard times, international dateline, Directions, terrestrial magnetism: declination, deviation and compass variations, magnetic poles, isogonals, relationship between true and magnetic Distance</p>	<b>08 Hours/ L2</b>
<p><b>Module 2</b> <b>Magnetism and Compasses:</b> General principles, terrestrial magnetism, resolution of the earth's total magnetic force into vertical and horizontal components, the effects of change of latitude on these components, Aircraft magnetism, Change of deviation with change of latitude and with change in aircraft's heading, turning and acceleration errors, compasses, serviceability tests, advantages and disadvantages of the remote indicating compasses, adjustment and compensation of direct reading magnetic compass</p>	<b>08 Hours/ L2</b>
<p style="text-align: center;"><b>Module 3</b></p> <p><b>Charts:</b> General properties of the miscellaneous type of projections, Mercator, Lambert conformal conic, Polar stereographic, Transverse Mercator, Oblique Mercator, the representation of meridians, parallels, great circles, and rhumb lines, direct Mercator, Lambert conformal conic, Polar Stereographic, the use of current aeronautical charts, plotting positions, methods of indicating scale and relief, conventional signs, measuring tracks and distances, plotting bearings</p>	<b>08 Hours/ L2</b>
<p style="text-align: center;"><b>Module 4</b></p> <p><b>Dead Reckoning Navigation (DR):</b> Basics of dead reckoning, Use of the navigational computer, The triangle of velocities, methods of solution for the determination of heading, ground speed, wind velocity, track and drift</p>	<b>08 Hours/ L2</b>

angle, track error, time and distance problems, Determination of DR position, Measurement of DR elements, Resolution of current DR problems, Measurement of maximum range, radius of action, point-of-safe-return and point-of-equal-time, Miscellaneous DR uncertainties and practical means of correction	
<b>Module 5</b>	
<b>In-flight Navigation:</b> Use of visual observations and application to in-flight navigation, Navigation in climb descent, average airspeed, average wind velocity, ground speed/distance covered during climb or descent, Navigation in cruising flight, use of fixes to revise navigation data as ground speed revision, off-track corrections, calculation of wind speed and direction, ETA revisions, Flight log (including navigation records)	<b>08 Hours/ L2</b>

COURSE OUTCOMES:

**Upon completion of this course, student will be able to:**

<b>CO552.1</b>	Understand the basic concepts of navigation system.
<b>CO552.2</b>	Outline the Principles of Magnetism and Compasses
<b>CO552.3</b>	Formulate a comparative study of Charts used in Navigation Systems
<b>CO552.4</b>	Analyze the chart reading and problem occurring on dead reckoning applying in natural means to navigate accurately to the destination
<b>CO552.5</b>	Apply the concept to Navigate correctly to in-flight Navigation

**Textbooks:**

1. C.W. Martin, Air Navigation.
2. D.C.T. Benett, The Complete Air Navigation.

**Reference books:**

1. T.C. Lyon, Practical Air Navigation.
2. RAT Manual of Air Navigation, A.P. 1234 Vols. A, B, D & E.

**Scheme of Examination:**

**Semester End Examination (SEE):**

**SEE Question paper is to be set for 100 marks and the marks scored will be proportionately reduced to 50.** There will be two full questions (with a maximum of four sub questions) from each module carrying 20 marks each. Students are required to answer any **five full questions** choosing at least **one full question from each module.**

**Continuous Internal Evaluation (CIE):**

Three Tests are to be conducted for **40 marks each.** CIE is executed by way of quizzes / Alternate Assessment Tools (AATs) for 10 marks.

**COURSE: AIRCRAFT SYSTEMS AND INSTRUMENTATION**

<b>Course Code</b>	<b>22ANE553</b>	<b>CIE Marks</b>	<b>50</b>
<b>Hours/Week (L: T: P)</b>	<b>2:2:0</b>	<b>SEE Marks</b>	<b>50</b>
<b>No. of Credits</b>	<b>3</b>	<b>Examination Hours</b>	<b>03</b>

**COURSE LEARNING OBJECTIVES:** To enable students to apply the knowledge of aircraft systems and instrumentation in broad domain of aeronautical engineering by making them to learn:

<b>CLO1</b>	To provide the knowledge on the aircraft control systems.
<b>CLO2</b>	learn about the aircraft systems
<b>CLO3</b>	Acquire the knowledge of aircraft engine systems
<b>CLO4</b>	To provide the basic knowledge of Aircraft auxiliary systems
<b>CLO5</b>	Acquire the knowledge on aircraft and air data instruments.

<b>Content</b>	<b>No. of Hours/ RBT levels</b>
<b>Module 1</b> <b>AIRCRAFT CONTROL SYSTEMS:</b> Conventional Systems, fully powered flight controls, Power actuated systems, Modern control systems, Digital fly by wire systems, Auto pilot system active control Technology.	<b>08 Hours/ L2</b>
<b>Module 2</b> <b>AIRCRAFT SYSTEMS:</b> Hydraulic systems, Study of typical workable system, components, Pneumatic systems, <b>Advantages</b> , working principles, Typical Air pressure system, Brake system, Typical Pneumatic power system, Components, Landing Gear systems, Classification.	<b>08 Hours/ L2</b>
<b>Module 3</b> <b>ENGINE SYSTEMS:</b> Fuel systems for Piston and jet engines, Components of multi engines. lubricating <b>systems</b> for piston and jet engines - Starting and Ignition systems - Typical examples for piston and jet engines.	<b>08 Hours/ L2</b>
<b>Module 4</b> <b>AUXILIARY SYSTEM:</b> <b>Basic</b> Air cycle systems, Vapour Cycle system Evaporative vapor cycle systems, Evaporative air cycle systems, Fire protection systems, Deicing and anti-icing systems.	<b>08 Hours/ L2</b>
<b>Module 5</b> <b>AIRCRAFT INSTRUMENTS:</b> Flight Instruments and Navigation Instruments, Gyroscope, Accelerometers, Air speed <b>Indicators</b> , TAS, EAS, Mach Meters, Altimeters, Principles and operation, Study of various types of engine instruments, Tachometers, Temperature gauges, Pressure gauges, Operation and Principles.	<b>08 Hours/ L2</b>

COURSE OUTCOMES:

Upon completion of this course, student will be able to:

CO553.1	Distinguish the conventional and modern control systems.
CO553.2	Classify the aircraft systems.
CO553.3	Categorize different types of aircraft instruments.
CO553.4	Comprehend the engine and fuel systems
CO553.5	Understand the basic flight and air data instrumentation

**COURSE: GAS TURBINE TECHNOLOGY**

<b>Course Code</b>	<b>22ANE554</b>	<b>CIE Marks</b>	<b>50</b>
<b>Hours/Week (L: T: P)</b>	<b>3:0:0</b>	<b>SEE Marks</b>	<b>50</b>
<b>No. of Credits</b>	<b>3</b>	<b>Examination Hours</b>	<b>03</b>

**COURSE LEARNING OBJECTIVES:** To enable students to apply the knowledge of Gas Turbine Technology in broad domain of aeronautical engineering by making them to learn:

<b>CLO1</b>	Revise various engine types and understand engine materials and manufacturing
<b>CLO2</b>	Study about engine fuel systems and engine starting systems with FADEC Interface
<b>CLO3</b>	Evaluate engine parts and their performance
<b>CLO4</b>	Analyse engine design performance and health monitoring
<b>CLO5</b>	Understand engine testing, measurements and instrumentation

<b>Content</b>	<b>No. of Hours/ RBT levels</b>
<b>Module 1</b> <b>Gas Turbine Engines, materials and manufacturing:</b> Types of engines showing arrangement of parts. Operating parameters. Energy distribution of turbojet, turboprop and turbofan engines. Criteria for selection of materials. Heat ranges of metals, high temperature strength. Surface finishing. Powder metallurgy. Use of composites and Ceramics. Super alloys for Turbines.	<b>08 Hours/ L2</b>
<b>Module 2</b> <b>Engine Systems:</b> Fuel systems and components. Sensors and Controls. FADEC interface with engine. Oil system components. Typical oil system. Starting systems. Typical starting characteristics. Various gas turbine starters.	<b>08 Hours/ L3</b>
<b>Module 3</b> <b>Engine parts &amp; their performance Estimation:</b> Compressor MAP. Surge margin, Testing and Performance Evaluation. Combustor MAP, Pressure loss. Testing and Performance Evaluation. Turbine MAP. Turbine Testing and Performance Evaluation. Ram pressure recovery of inlet duct. Propelling nozzles, after burner, maximum mass flow conditions. Testing and Performance Evaluation	<b>08 Hours/ L3</b>
<b>Module 4</b> <b>Engine Design Performance and Health monitoring:</b> Design & off-design Performance. Surge margin requirements, surge margin stack up. Transient performance. Qualitative characteristics quantities. Transient working lines. Starting process & Wind milling of Engines. Thrust engine start envelope. Calculations for design and off-design performance from given test data—(case study for a single shaft Jet Engine). Engine health monitoring.	<b>08 Hours/ L3</b>

<b>Module 5</b>	<b>08 Hours/ L3</b>
<b>Engine Testing, Measurements and Instrumentation:</b> Proof of Concepts: Design Evaluation tests. Structural Integrity. Environmental Ingestion Capability. Preliminary Flight Rating Test, Qualification Test, Acceptance Test. Reliability figure of merit. Durability and Life Assessment Tests, Test Beds and its types, Ram Air Testing, Altitude Testing, Ground Testing, Flight testing. Data Acquisition system, Jet thrust measurements in flight, Measurement of Shaft speed, Torque, Thrust, Pressure, Temperature, Vibration, Stress, Temperature of turbine blading etc. Engine performance trends: Mass and CUSUM plots. Accuracy and Uncertainty in Measurements. Uncertainty analysis. Performance Reduction Methodology.	

**COURSE OUTCOMES:**

**Upon completion of this course, student will be able to:**

<b>CO554.1</b>	Revise various engine types and understand engine materials and manufacturing
<b>CO554.2</b>	Identify engine fuel systems and engine starting systems with FADEC Interface
<b>CO554.3</b>	Evaluate engine parts and their performance
<b>CO554.4</b>	Analyse engine design performance and health monitoring
<b>CO554.5</b>	List engine testing, measurements and instrumentation

**Textbooks:**

1. Irwin E. Treager, Gas Turbine Engine Technology, McGraw Hill Education, 3<sup>rd</sup> edition, 2013
2. P. P Walsh and P. Peletcher, Gas Turbine Performance, Blackwell Science Science 1998
2. A. W. Morley Jean Fabri Pergamon, Advanced Aero-Engine Testing, 1959

2. Michael J. Kores, and Thomas W. Wild, Aircraft Power Plant Tata Mc Graw Hill Publishing Co. Ltd 7th Edition, 2002

**Scheme of Examination:**

**Semester End Examination (SEE):**

**SEE Question paper is to be set for 100 marks and the marks scored will be proportionately reduced to 50.** There will be two full questions (with a maximum of four sub questions) from each module carrying 20 marks each. Students are required to answer any **five full questions** choosing at least **one full question from each module.**

**Continuous Internal Evaluation (CIE):**

Three Tests are to be conducted for **40 marks each.** CIE is executed by way of quizzes / Alternate Assessment Tools (AATs) for 10 marks.

**Table 1: Distribution of weightage for CIE & SEE of Regular courses**

# VI SEMESTER SYLLABUS

Head of the Department  
Dept. of Aeronautical Engineering  
Global Academy of Technology  
- R.R. Nagar, Bengaluru - 560 098.

## SEMESTER – VI

### COURSE: AIRCRAFT PERFORMANCE

<b>Course Code</b>	<b>22ANE61</b>	<b>CIE Marks</b>	<b>50</b>
<b>Hours/Week (L: T: P)</b>	<b>2:2:0</b>	<b>SEE Marks</b>	<b>50</b>
<b>No. of Credits</b>	<b>3</b>	<b>Examination Hours</b>	<b>03</b>

**Pre requisite:** Low Speed Aerodynamics

**Course Learning Objectives:** To enable students to apply the knowledge of airplane performance and design in broad domain of aeronautical engineering by making them to learn:

<b>CLO1</b>	learn how airplanes fly and perform in steady, un-accelerated flight
<b>CLO2</b>	understand key aspects of airplane performance such as maximum speed, climb capabilities
<b>CLO3</b>	calculate the range and endurance of airplanes, considering different propulsion types and wind conditions.
<b>CLO4</b>	Analyze take-off, landing, and maneuvering performance and learn how airplanes perform in steady, un-accelerated flight

Content	No. of Hours/ RBT levels
<p><b>Module 1: THE EQUATIONS OF MOTION STEADY UN-ACCELERATED FLIGHT</b></p> <p>The evolution of the airplane and the performance, a short history. Variation of lift, drag and moment coefficient with angle of attack and Mach number, four forces of flight, General equation of motion, Power available and power required curves. Thrust available and thrust required curves. Conditions for power required and thrust required minimum. Altitude effects on power available and power required; thrust available and thrust required.</p>	<b>10 Hours / L3</b>
<p><b>MODULE 2: FUNDAMENTAL AIRPLANE PERFORMANCE</b></p> <p>Level Flight, Climb &amp;Glide: Equation of motion for steady level flight, Performance of airplane in level flight. Maximum speed in level flight, Climb. Equation of motion for Rate of climb- graphical and analytical approach - Absolute ceiling, Service ceiling, Time to climb – graphical and analytical approach, climb performance graph (hodograph diagram). Thrust – to – weight ratio, Wing loading, Drag polar, and lift-to – drag ratio. Minimum velocity: Stall and High lift devices.</p>	<b>10 Hours / L3</b>
<p><b>Module 3: RANGE AND ENDURANCE</b></p> <p>Propeller driven and Jet Airplane: Physical consideration, Quantitative formulation, Breguet equation for Range and Endurance, Conditions for maximum range and endurance. Effect of head wind and tail wind for jet airplane.</p>	<b>12 Hours / L3</b>
<p><b>Module 4: AIRCRAFT PERFORMANCE IN ACCELERATED FLIGHT</b></p> <p>Take-off Performance: Calculation of Ground roll, Calculation of distance while airborne to clear obstacle, Balanced field length.</p> <p>LANDING PERFORMANCE AND ACCELERATED CLIMB: Calculation of approach distance, Calculation of flare distance, Calculation of ground roll, ground effects. Acceleration in climb.</p>	<b>10 Hours / L3</b>

*Bing*

<b>Module 5: MANEUVER PERFORMANCE</b> Turning performance: Level turn, load factor, Constraints on load factor, Minimum turn radius, Maximum turn rate. Pull-up and Pull-down maneuvers: (Turning rate, turn radius). Limiting case for large load factor. The V-n diagram. Limitations of pull up and push over.	<b>10 Hours / L3</b>
--	----------------------

**COURSE OUTCOMES:**

**Upon completion of this course, student will be able to:**

<b>CO61.1</b>	Understand the variation of aerodynamic coefficients with varying flow parameters
<b>CO61.2</b>	Apply the concepts of steady performance to analyze level flight, climb, and glide performance.
<b>CO61.3</b>	Determine the range and endurance of propeller and Jet driven airplane.
<b>CO61.4</b>	Comprehend the aircraft take-off and landing performance.
<b>CO61.5</b>	Identify and explain the key factors affecting maneuver performance

**Textbooks:**

1. John D. Anderson, Jr., "Aircraft Performance and Design", McGraw-Hill International, 1999.
2. John D. Anderson, Jr., "Introduction to flight", McGraw-Hill International, 2000.

**Reference books:**

## SEMESTER -V

### COURSE: AIRCRAFT STRUCTURES-II

Course Code	22ANE62	CIE Marks	50
Hours/Week (L: T: P)	3:0:0	SEE Marks	50
No. of Credits	3	Examination Hours	03

**Pre-requisite:** Aircraft structural mechanics

**Course Learning Objectives: To enable students to apply the knowledge of Aircraft Structural Analysis in broad domain of Aeronautical Engineering by making them to learn:**

<b>CLO1</b>	Assess the Bending stresses in thin walled beams
<b>CLO2</b>	Analyze the Shear Flow in open and closed beams
<b>CLO3</b>	Evaluate the forces on Joints and fittings
<b>CLO4</b>	Apply the Structural Idealization to various structural components of an aircraft
<b>CLO5</b>	Analyze the stresses in wings and fuselage structures

Content	No. of Hours/RBT levels
<p style="text-align: center;"><b>Module 1</b></p> <p><b>BENDING OF OPEN AND CLOSED THIN WALLED BEAMS</b> Symmetrical bending, unsymmetrical bending, direct stress distribution due to bending, position of the neutral axis, load intensity, shear force, and bending moment relationships, deflection due to bending, calculation of section properties, approximation for thin-walled sections.</p>	<b>08Hours/ L3</b>
<p style="text-align: center;"><b>Module 2</b></p> <p><b>SHEAR FLOW IN OPEN SECTIONS</b> Thin walled beams, Concept of shear flow, shear centre, Elastic axis. With one axis of symmetry, with wall effective and ineffective in bending, unsymmetrical beam sections.</p> <p><b>SHEAR FLOW IN CLOSED SECTIONS</b> Bredt – Batho formula, Single and multi – cell structures, approximate methods. Shear flow in single and multi-cell under bending -with walls effective and ineffective.</p>	<b>08 Hours/ L3</b>
<p style="text-align: center;"><b>Module 3</b></p> <p><b>JOINTS AND FITTINGS</b> Bolted or riveted joints, accuracy of fitting analysis, eccentrically loaded connections, welded joints, and concept of effective width.</p>	<b>08 Hours/ L3</b>
<p><b>Module 4</b></p> <p><b>STRUCTURAL IDEALIZATION:</b> Structural idealization Principle, Idealization of a panel, effect of idealization on the analysis of open and closed section beams. Bending of open and closed section idealized beams, shear of open section and closed section idealized beams.</p>	<b>08 Hours / L3</b>

<b>Module 5</b> <b>STRESS ANALYSIS IN WING SPARS AND BOX BEAMS:</b> Tapered wing spar, open and closed section beams, beams having variable stringer areas, three-boom shell, tapered wings, cut-outs in wings. <b>STRESS ANALYSIS IN FUSELAGE FRAMES:</b> Bending, shear, torsion, cut-outs in fuselages, principles of stiffeners construction, fuselage frames, shear flow distribution.	<b>08 Hours / L3</b>
---	----------------------

**COURSE OUTCOMES:**

**Upon completion of this course, student will be able to:**

<b>CO53.1</b>	Evaluate the direct bending stresses exhibited in both open and closed sections, employing advanced analytical techniques to comprehend their structural implications.
<b>CO53.2</b>	Examine and assess the intricate patterns of shear flow within both open and closed sections employing advanced analytical methodologies to grasp their structural ramifications.
<b>CO53.3</b>	Determine loads on riveted and welded joints for optimized structural performance.
<b>CO53.4</b>	Applying idealization concepts to simplify complex structural sections to understand how they behave, under given loading conditions.
<b>CO53.5</b>	Analyze the stresses in wings and fuselage structures

**Textbooks:**

## SEMESTER -VI

### COURSE: CONTROL ENGINEERING AND MICROPROCESSORS

Course Code	22ANE63	CIE Marks	50
Hours/Week (L: T: P)	3:0:0	SEE Marks	50
No. of Credits	3	Examination Hours	03

**Pre-requisite:** Nil

**Course Objectives:** To enable students to apply the knowledge of Control engineering and Microprocessors in broad domain of Aeronautical Engineering by making them to learn:

<b>CLO1</b>	Open and Closed Loop Systems, Feedback Control systems and Mathematical Models.
<b>CLO2</b>	Transfer Functions, Block Diagrams and Signal flow graphs
<b>CLO3</b>	System stability and types of controllers
<b>CLO4</b>	Basics about linear and digital IC's
<b>CLO5</b>	Architecture of Microprocessor and its application

Content	No. of Hours/RBT levels
<p><b>Module 1: MATHEMATICAL MODELLING OF CONTROL SYSTEMS</b>                      Concept of system and its types, control system- Open loop and closed loop systems with examples, Concepts of feedback and basic structure of feedback control system. DC and AC motors in control systems, Transfer functions definition and its properties - Transfer function models of mechanical systems, electrical circuits -Analogous systems: Force voltage and Force current analogy, Torque voltage and Torque current.</p>	<b>10 Hours/L3</b>
<p><b>Module 2: BLOCK DIAGRAMS AND SIGNAL FLOW GRAPHS</b>                      Block representation of control systems and terminologies, block diagram algebra and reduction of block diagrams, Signal flow graph method, Mason's gain formula and its applications.</p>	<b>08 Hours/L3</b>
<p><b>Module 3: STABILITY AND CONTROL</b>                      System stability analysis using Routh's – Hurwitz Criterion, Root locus, Time response and frequency response - Bode plot, Digital controllers and its types, application-Compensation methods – Series and feedback compensation, Lead, Lag and Lead-Lag Compensators</p>	<b>08 Hours/ L4</b>
<p><b>Module 4: LINEAR AND DIGITAL IC'S</b>                      Comparison Between Analog and Digital Systems - Number Representation - Binary, Octal and Hexadecimal Number Systems- Half Adder and Full Adder -Multiplexers- Demultiplexers - Decoders – Encoders.</p>	<b>08 Hours/L4</b>
<p><b>Module 5: MICROPROCESSORS</b>                      Architecture of Intel 8085- Instruction Formats - Addressing Modes - Simple Assembly Language Programs - Architecture and Functioning of Intel 8086 Processor - Instruction Formats – Addressing Modes. Microprocessor Applications in aerospace</p>	<b>08 Hours/L4</b>

## COURSE OUTCOMES:

Upon completion of this course, student will be able to:

CO63.1	Comprehend the open loop & closed loop systems and Mathematical Models.
CO63.2	Solve the complex physical systems using Block diagrams and Signal Flow Graphs and obtain Transfer function
CO63.3	Apply the feedback control systems for stability and Controllers
CO63.4	Summarize the basic knowledge on Linear and Digital ICs.
CO63.5	Outline the architectures of Microprocessor and its application

### Textbooks:

1. Control Engineering- U.A. Bakshi and V.U. Bakshi, Technical Publications Autar Kaw,
2. Control Systems Engineering, A. NagoorKani, RBA Publications 2014 edition,2006.

### Reference books:

1. Modern Control Engineering, Katsuhiko Ogatta, Pearson Education 2004
2. Control Systems Engineering, I.J. Nagrath and M. Gopal, New Age Publishers 2017
3. Modern Control Systems, Richard. C. Dorf and Robert.H. Bishop Addison Wesley 1999

### Scheme of Examination:

#### Semester End Examination (SEE):

SEE Question paper is to be set for 100 marks and the marks scored will be proportionately reduced to 50. There will be two full questions (with a maximum of four sub questions) from each module carrying 20 marks each. Students are required to answer any **five full questions** choosing at least **one full question from each module**.

#### Continuous Internal Evaluation (CIE):

Three Tests are to be conducted for 40 marks each. The average of the three tests are taken for computation of CIE-on a scale of 30, the CIE would also include laboratory evaluation for 20 marks. The laboratory marks of 20 would comprise of 10 marks for regular laboratory assessment to include lab record and observation. 10 marks would be exclusive for laboratory internal assessment test to be conducted at the end of the semester

**Table 1: Distribution of weightage for CIE & SEE of Regular courses**

**SEMESTER VI**  
**PROFESSIONAL ELECTIVE 2**

**COURSE: ROCKET AND MISSILES**

Course Code	22ANE641	CIE Marks	50
Hours/Week (L: T: P)	3:0:0	SEE Marks	50
No. of Credits	3	Examination Hours	03

**Pre-requisite: low speed and high speed Aerodynamics and Propulsion**

**Objectives:**

To give revelation on basic concepts of rocket motion, rocket aerodynamics, staging & control of rockets, materials and propulsion systems of rockets and missiles to students to augment their knowledge in the region of rockets and missile flight.

<b>CLO1</b>	Understand the historical development of rockets and missiles and their significance in aerospace technology.
<b>CLO2</b>	Analyze the Aerodynamic Characteristics of Rockets and Missiles.
<b>CLO3</b>	Gaining knowledge about the Trajectory Motion of Rockets and Missiles.
<b>CLO4</b>	Gain the knowledge on the separation of stages of rocket and its control
<b>CLO5</b>	Understand the Materials used in Rockets and Missiles

Content	No. of Hours/ RBT levels
<p><b>Module 1: CLASSIFICATION OF ROCKETS AND MISSILES:</b> History of rockets and missiles, Various methods of classification of missiles and rockets – Basic aerodynamic characteristics of surface to surface, surface to air, air to surface and air to air missiles – Examples of various Indian space launch vehicles and missiles – Current status of Indian rocket and missile program.</p>	<b>08 Hours/ L2</b>
<p><b>Module 2: ROCKET MOTION IN FREE SPACE AND GRAVITATIONAL FIELD:</b> One Dimensional and Two-Dimensional Rocket Motions in Free Space and Homogeneous Gravitational Fields – description of Vertical, Inclined and Gravity Turn Trajectories – Determination of range and Altitude.</p>	<b>08 Hours/ L3</b>
<p><b>Module 3: AERODYNAMICS OF ROCKETS AND MISSILES:</b> Forces Acting on a Missile While Passing Through atmosphere, methods of Describing Aerodynamic Forces and Moments – Lateral Aerodynamic Moment – Lateral Damping Moment and Longitudinal Moment of a Rocket – lift and Drag Forces.</p>	<b>08 Hours/ L3</b>
<p><b>Module 4: STAGING AND CONTROL OF ROCKETS AND MISSILES:</b> Multi staging of rockets and ballistic missiles – Multistage Vehicle Optimization – Stage Separation Dynamics – Stage Separation Techniques in atmosphere and in space, Introduction to aerodynamic and jet control methods – various types of aerodynamic control methods for tactical and short-range missiles.</p>	<b>10 Hours/ L3</b>

<b>Module 5: MATERIALS FOR ROCKETS AND MISSILES:</b> Criteria for selection of materials for rockets and missiles, requirements for choice of materials for propellant tanks, liners, insulators, inhibitors, at cryogenic temperatures, requirements of materials at extremely high temperatures, requirements of materials for thermal protection and for pressure vessels.	<b>08 Hours/L2</b>
--	--------------------

**COURSE OUTCOMES:**

**Upon completion of this course, student will be able to:**

CO641.1	Classify rockets and missiles based on various methods and explain the basic aerodynamic characteristics of different types.
CO641.2	Analyze the Motion of Rocket and Missiles in free space and gravitational field
CO641.3	Analyze the Aerodynamic Forces and Moments of Rockets and Missiles.
CO641.4	Describe the Stage separation of Multi staging rocket and various aerodynamic & jet control methods
CO641.5	Assess and choose appropriate Materials for Rockets and Missiles.

**SEMESTER VI  
PROGRAM ELECTIVE -2**

**COURSE: THEORY OF ELASTICITY**

<b>Course Code</b>	<b>22ANE642</b>	<b>CIE Marks</b>	<b>50</b>
<b>Hours/Week (L: T: P)</b>	<b>2:2:0</b>	<b>SEE Marks</b>	<b>50</b>
<b>No. of Credits</b>	<b>3</b>	<b>Examination Hours</b>	<b>03</b>

**Pre requisite:** Aircraft Structures-I

**Course Learning Objectives:** To enable students to apply the knowledge of Theory of Elasticity in broad domain of aeronautical engineering by making them to learn:

<b>CLO1</b>	To make the student understand the elastic behavior of different structural components under various loadings and boundary conditions.
<b>CLO2</b>	Describe the Plane stress and Plane strain Problems
<b>CLO3</b>	Knowledge to formulate and derive static and dynamic aero elastic equations of motion.
<b>CLO4</b>	To understand the theories of torsion, including Navier's theory, Saint-Venant's theory, and Prandtl's theory, and apply them to analyze torsional behavior
<b>CLO5</b>	To introduce classical plate theory, its assumptions, governing equations, and boundary conditions

<b>Content</b>	<b>No. of Hours/RBT levels</b>
<b>Module 1: BASIC EQUATIONS OF ELASTICITY</b> Definition of Stress and Strain: Stress - Strain relationships - Equations of Equilibrium, Compatibility equations, Boundary Conditions, Saint Venant's principle - Principal Stresses, Stress Ellipsoid – Stress invariant	<b>08 Hours/ L3</b>
<b>Module 2: PLANE STRESS AND PLANE STRAIN PROBLEMS</b> Airy's stress function, Bi-harmonic equations, Polynomial solutions, Simple two-dimensional problems in Cartesian coordinates like bending of cantilever and simply supported beams.	<b>08 Hours/ L3</b>
<b>Module 3: POLAR COORDINATES</b> Equations of equilibrium, Strain - displacement relations, Stress – strain relations, Airy's stress function, Axi – symmetric problems, Introduction to Dunder's table, curved beam analysis, Lamé's, Kirsch, Michell's and Boussinesq problems – Rotating discs.	<b>10 Hours/ L3</b>
<b>Module 4: TORSION</b> Navier's theory, Saint. Venant's theory, Prandtl's theory on torsion, semi-inverse method, and applications to shafts of circular, elliptical, equilateral triangular and rectangular sections. Membrane Analogy.	<b>08 Hours/ L3</b>
<b>Module 5: INTRODUCTION TO THEORY OF PLATES AND SHELLS</b> Classical plate theory – Assumptions – Governing equations – Boundary conditions – Navier's method of solution for simply supported rectangular plates – Levy's method of solution for rectangular plates under different boundary conditions.	<b>08 Hours/ L3</b>

## COURSE OUTCOMES:

Upon completion of this course, student will be able to:

CO642.1	Ability to use mathematical knowledge to solve problem related to structural elasticity.
CO642.2	Identify stress-strain relation in 3D, principal stress and principal strain.
CO642.3	Analyze a structure using Elasticity concepts.
CO642.4	Use analytical techniques to predict deformation, internal force and failure of simple solids and structural components.
CO642.5	Solve aerospace-relevant problems in plane strain and plane stress in Cartesian and polar coordinates.

4. Wang, C. T., "Applied Elasticity", McGraw – Hill Co., New York, 1993.

### Scheme of Examination:

#### Semester End Examination (SEE):

**SEE Question paper is to be set for 100 marks and the marks scored will be proportionately reduced to 50.** There will be two full questions (with a maximum of four sub questions) from each module carrying 20 marks each. Students are required to answer any **five full questions** choosing at least one full question from each module.

#### Continuous Internal Evaluation (CIE):

Three Tests are to be conducted for 40 marks each. CIE is executed by way of quizzes/Alternate Assessment Tools (AATs) for 10 marks.

**Table 1: Distribution of weightage for CIE & SEE of Regular courses**

**SEMESTER VI  
PROGRAM ELECTIVE -2**

**COURSE: AIRCRAFT MAINTENANCE, OVERHAUL AND REPAIRS**

<b>Course Code</b>	<b>22ANE643</b>	<b>CIE Marks</b>	<b>50</b>
<b>Hours/Week (L: T: P)</b>	<b>3:0:0</b>	<b>SEE Marks</b>	<b>50</b>
<b>No. of Credits</b>	<b>3</b>	<b>Examination Hours</b>	<b>03</b>

**COURSE LEARNING OBJECTIVES:** To enable students to apply the knowledge of aircraft maintenance, overhaul and repairs in broad domain of aeronautical engineering by making them to learn:

<b>CLO1</b>	Explain about ground handling procedures and precautions, engine starting procedures.
<b>CLO2</b>	Gain thorough understanding about the ground servicing of sub systems in Aircraft and shop safety during maintenance
<b>CLO3</b>	Get a clear idea about the FAA airworthiness regulations and the checklist involved in each inspection of aircraft
<b>CLO4</b>	About the welding in aircraft structural components & sheet metal repair and maintenance
<b>CLO5</b>	Explain about various tools used, terminology and specifications involved in Aircraft hardware selection and fluid line fittings.

<b>Content</b>	<b>No. of Hours/ RBT levels</b>
<b>Module 1: AIRCRAFT GROUND HANDLING AND SUPPORT EQUIPMENT</b> Mooring, jacking, leveling and towing operations - Preparation - Equipment - precautions - Engine starting procedures - Piston engine, turboprops and turbojets - Engine fire extinguishing - Ground power units.	<b>08 Hours/ L2</b>
<b>Module 2: GROUND SERVICING OF VARIOUS SUB SYSTEMS AND SAFETY MAINTENANCE</b> Air conditioning and pressurization - Oxygen and oil systems - Ground units and their maintenance. Shop safety - Environmental cleanliness - Precautions	<b>08 Hours/ L2</b>
<b>Module 3: INSPECTION</b> Process - Purpose - Types - Inspection intervals - Techniques - Checklist - Special inspection - Publications, bulletins, various manuals - FAR Air worthiness directives - Type certificate Data Sheets - ATA specifications	<b>08 Hours/ L2</b>
<b>Module 4: WELDING AND REPAIR IN AIRCRAFT STRUCTURAL COMPONENTS</b> Equipment used in welding shop and their maintenance - Ensuring quality welds - Welding jigs and fixtures - Soldering and brazing. Inspection of damage - Classification - Repair or replacement - Sheet metal inspection - N.D.T. Testing - Riveted repair design, Damage investigation - reverse technology. Reliable quality.	<b>08 Hours/ L2</b>
<b>Module 5: AIRCRAFT HARDWARE, MATERIALS, SYSTEMS PROCESSES</b> Hand tools - Precision instruments - Special tools and equipment in an airplane maintenance shop - Identification terminology - Specification and correct use of various aircraft hardware (i.e. nuts, bolts, rivets, screws etc.) - identification of all types of fluid line fittings. Materials, metallic and non-metallic - Plumbing Connectors - Cables - Swaging procedures, tests, Advantages of swaging over splicing	<b>10 Hours/ L2</b>

## COURSE OUTCOMES:

Upon completion of this course, student will be able to:

CO643.1	understand ground handling procedures and precautions, engine starting procedures
CO643.2	understand about the ground servicing of sub systems in Aircraft and safety precautions
CO643.3	To know about the FAA airworthiness regulations and the checklist involved in each inspection of aircraft
CO643.4	Describe welding process sheet metal repair used I aircraft maintenance
CO643.5	understand various tools used, terminology and specifications involved in Aircraft hardware selection and fluid line fittings

**COURSE: FUELS AND COMBUSTION**

<b>Course Code</b>	<b>22ANE644</b>	<b>CIE Marks</b>	<b>50</b>
<b>Hours/Week (L: T: P)</b>	<b>3:0:0</b>	<b>SEE Marks</b>	<b>50</b>
<b>No. of Credits</b>	<b>3</b>	<b>Examination Hours</b>	<b>03</b>

**Pre-requisite:** Aircraft Propulsion

**Course Learning Objectives:** To enable students to apply the knowledge of Fuels and Combustion in broad domain of aeronautical engineering by making them to learn:

<b>CLO1</b>	About the fuel properties
<b>CLO2</b>	Fuel treatment and Alternative fuels for Aerospace applications
<b>CLO3</b>	Combustion chemistry and fundamentals
<b>CLO4</b>	Flame characterization, stabilization, and combustion performance
<b>CLO5</b>	Fuels of aircraft and rocket fuel and their properties.

<b>Content</b>	<b>No. of Hours/ RBT levels</b>
<b>Module 1: FUEL PROPERTIES</b> Fuel Properties, Combustion Properties of Fuels, Calorific Value, Enthalpy, Spontaneous-Ignition temperature, Limits of Flammability, Smoke Point, Luminometer Number, Smoke Volatility Index, Pressure and Temperature Effects, Sub atmospheric Pressure, Low Temperature, High Temperature.	<b>08 Hours/ L3</b>
<b>Module 2: FUEL TREATMENT AND ALTERNATIVE FUELS</b> Types of Hydrocarbons. Production of Liquid Fuels. Removal of Sulfur Compounds, Contaminants. Additives, Gum Prevention, Corrosion Inhibition/Lubricity Improvers, Anti-Icing, Antistatic– Static Dissipaters, Metal Deactivators and Antismoke. Biofuels, Synthesis of biofuels, Alternative fuel and their Properties, Biodiesel Fuels.	<b>08 Hours/ L3</b>
<b>Module 3: COMBUSTION CONSIDERATIONS</b> Basic Design Features, Combustor Requirements, Fuel Preparation, Atomizers, liner wall-cooling Techniques, combustor stability limits, combustor exit temperature traverse quality (pattern factors), Combustors for Low Emissions. Deflagration, Detonation, Classification of Flames, Flammability Limits, Global Reaction-Rate Theory, Weak Mixtures, Rich Mixtures.	<b>08 Hours/ L3</b>

<b>Module 4: COMBUSTION FLAME CHARACTERIZATION AND STABILIZATION:</b> Droplet and Spray Evaporation, Heat-Up Period, Evaporation Constant, Convective Effects, Ignition Theory, Gaseous Mixtures, Heterogeneous Mixtures, Spontaneous Ignition, Adiabatic Flame Temperature, Factors Influencing the Adiabatic Flame Temperature. Combustion Efficiency, The Combustion Process, Reaction and Evaporation Controlled Systems.	<b>10 Hours/L3</b>
<b>Module 5: FUEL CLASSIFICATION AND ROCKET FUELS</b> Classification of Liquid Fuels, Aircraft Gas Turbine Fuels. Classification of Gaseous Fuels. Classification of rocket fuels, rocket fuel specifications and fuels properties.	<b>08 Hours/L3</b>

**COURSE OUTCOMES:**

**Upon completion of this course, student will be able to:**

<b>CO644.1</b>	Identify fuels and their properties their treatment for aerospace applications.
<b>CO644.2</b>	Interpret various fuel treatments and alternative fuel for combustion
<b>CO644.3</b>	Explain the combustion fundamentals terms and definitions
<b>CO644.4</b>	Categorize combustion flame, stabilization, and combustion performance.
<b>CO644.5</b>	Classify fuels of aircraft and rocket fuel and their properties.

**COURSE: INTRODUCTION TO AEROSPACE ENGINEERING**

<b>Course Code</b>	<b>22ANE651</b>	<b>CIE Marks</b>	<b>50</b>
<b>Hours/Week (L: T: P)</b>	<b>3:0:0</b>	<b>SEE Marks</b>	<b>50</b>
<b>No. of Credits</b>	<b>3</b>	<b>Examination Hours</b>	<b>03</b>

**Course Objectives:** To enable students to apply the knowledge of Introduction to Aerospace Engineering in broad domain of Aeronautical Engineering by making them to learn:

<b>CLO1</b>	To provide with a historical perspective on aviation and space technology, including the pioneers of aeronautical engineering
<b>CLO2</b>	To introduce fundamental principles of aerodynamics, and the forces acting on an aircraft.
<b>CLO3</b>	To explore the properties of materials used in flight vehicles, emphasizing the importance and introducing composite materials
<b>CLO4</b>	To introduce various aircraft power plants, and provide an overview of propulsion principles
<b>CLO5</b>	To familiarize with flight instruments and navigation instruments, and gyroscopic instruments, explaining their principles of operation

<b>Content</b>	<b>No. of Hours/ RBT levels</b>
<b>Module 1: HISTORY OF AVIATION AND SPACE TECHNOLOGY</b> First Aeronautical Engineers, Atmosphere and its properties - The International Standard Atmosphere, the Physical Properties of Air, classification of aircrafts- lighter than aircraft, heavier than aircraft, basic components of an aircraft, roles of aircrafts development in military aviation	<b>08 Hours/ L3</b>
<b>Module 2: BASIC AERODYNAMICS</b> Bernoulli's Principle, Airfoils, nomenclature, wing planform, angle of attack, forces over wing section-lift, drag, Thrust, weight and moments, measurement of airspeed, aircraft motions, control surfaces and high lift devices.	<b>08 Hours/ L3</b>
<b>Module 3: AIRCRAFT STRUCTURES AND MATERIALS</b> Properties of flight vehicle Materials; importance of strength to weight ratio, classification and characteristics of composite materials.	<b>08 Hours / L3</b>
<b>Module 4: AIRCRAFT PROPULSION</b> Aircraft power plants, classification based on power plant engine and principle of operation. Turboprop, turbojet and turbofan engines; ramjets and scramjets, use of propellers, Introduction to types of rockets, missiles.	<b>10 Hours / L3</b>
<b>Module 5: AIRCRAFT INSTRUMENTS</b> Flight instruments and navigation instruments – accelerometers, air speed indicators – Mach meters – altimeters – gyroscopic instruments. Principles and operation.	<b>08 Hours/ L3</b>

## COURSE OUTCOMES:

Upon completion of this course, student will be able to:

<b>CO651.1</b>	Have a foundational knowledge of the history of aviation, an understanding of the atmosphere's properties, and the ability to classify different types of aircraft
<b>CO651.2</b>	Capable of applying Bernoulli's Principle to understand lift and drag, describe airfoil nomenclature, and analyze forces
<b>CO651.3</b>	Assess the properties of materials used in aviation, recognize the significance
<b>CO651.4</b>	Categorizing and describing different types of aircraft engines, explaining their operational principles
<b>CO651.5</b>	Have a comprehensive understanding of various flight and navigation instruments, including their principles of operation

**COURSE: THE HISTORY OF AVIATION**

<b>Course Code</b>	<b>22ANE652</b>	<b>CIE Marks</b>	<b>50</b>
<b>Hours/Week (L: T: P)</b>	<b>3:0:0</b>	<b>SEE Marks</b>	<b>50</b>
<b>No. of Credits</b>	<b>3</b>	<b>Examination Hours</b>	<b>03</b>

**Course Objectives:** To enable students to apply the knowledge of history of aviation Engineering in broad domain of Aeronautical Engineering by making them to learn:

<b>CLO1</b>	Explore the historical origins of human flight, from early dreamers to early inventors and pioneers
<b>CLO2</b>	Examine the Wright brothers' journey to achieve powered, controlled flight and understand the principles they applied
<b>CLO3</b>	Investigate the rapid advancements in aviation during the early 20th century, including the impact of World War I
<b>CLO4</b>	Analyze the role of aviation during World War II, including developments in military aircraft and the Cold War-era arms race
<b>CLO5</b>	Explore the jet age, supersonic flight, and contemporary advancements in aviation technology and sustainability

<b>Content</b>	<b>No. of Hours/ RBT levels</b>
<p><b>Module 1: EARLY PIONEERS OF FLIGHT</b> The pre-history of aviation and early dreams of flight. The contributions of inventors and pioneers like Leonardo da Vinci, the Montgolfier brothers, and Sir George Cayley. The development of balloons and gliders in the 18th and 19th centuries</p>	<b>08 Hours/ L3</b>
<p><b>Module 2: THE WRIGHT BROTHERS AND THE BIRTH OF POWERED FLIGHT</b> The Wright brothers' background and their journey to Kitty Hawk. The principles of controlled powered flight. The significance of the Wright brothers' first powered, controlled, sustained flight in 1903.</p>	<b>08 Hours/ L3</b>
<p><b>Module 3: THE GOLDEN AGE OF AVIATION</b> The rapid advancements in aviation technology during the early 20th century. The impact of World War I on aviation development. The era of aviation pioneers like Charles Lindbergh and Amelia Earhart. The growth of commercial aviation and the birth of major airlines.</p>	<b>08 Hours / L3</b>
<p><b>Module 4: AVIATION DURING WORLD WAR II AND THE COLD WAR</b> The role of aviation during World War II, including the development of fighter planes and bombers. The Cold War-era arms race and the development of military aircraft. The space race and the early days of human spaceflight.</p>	<b>10 Hours / L3</b>

<b>Module 5: MODERN AVIATION AND FUTURE TRENDS</b> The jet age and the introduction of commercial jetliners. The development of supersonic and hypersonic aircraft. The impact of technology on aviation, including automation, navigation systems, and air traffic control. Environmental challenges and the future of sustainable aviation.	<b>08 Hours/ L3</b>
---	---------------------

**COURSE OUTCOMES:**

**Upon completion of this course, student will be able to:**

<b>CO652.1</b>	Gain an understanding of the contributions of historical figures and the evolution of ideas leading to the development of aviation
<b>CO652.2</b>	Appreciate the significance of the Wright brothers' historic flight and their pioneering contributions to aviation
<b>CO652.3</b>	Recognize the achievements of aviation pioneers like Charles Lindbergh and the growth of commercial aviation
<b>CO652.4</b>	Understand the critical role of aviation in global conflicts and the transition into the Cold War era.
<b>CO652.5</b>	Gain insights into modern aviation technology, environmental challenges, and emerging trends shaping the future of flight

**COURSE: AIRPORT PLANNING & MANAGEMENT**

<b>Course Code</b>	<b>22ANE653</b>	<b>CIE Marks</b>	<b>50</b>
<b>Hours/Week (L: T: P)</b>	<b>3:0:0</b>	<b>SEE Marks</b>	<b>50</b>
<b>No. of Credits</b>	<b>3</b>	<b>Examination Hours</b>	<b>03</b>

**Course Objectives:** To enable students to apply the knowledge of Airport Planning and Management by making them to learn typical operations of airport operations, economic, political and social role of airports and its management.

<b>CLO1</b>	To gain knowledge of the typical operations of airports from a management perspective
<b>CLO2</b>	To provide insights of economic, political and social role of airports
<b>CLO3</b>	Acquire the knowledge of airport operations
<b>CLO4</b>	Acquire the knowledge airport financial management
<b>CLO5</b>	Provide insights into the operational delay and capacity management

<b>Content</b>	<b>No. of Hours/ RBT levels</b>
<p><b>Module 1: AIRPORTS AND AIRPORT SYSTEMS</b> Introduction: Airport management on an international level; The national plan of integrated airport systems; The nation's airport system plan; The rules that govern airport management; Organizations that influence airport regulatory policies; A historical and legislative perspective: Introduction the formative period of aviation and airports, Airport growth: World War-II and the postwar period airport modernization: The early jet age.</p>	<b>08 Hours/ L2</b>
<p><b>Module 2: COMPONENTS OF THE AIRPORT</b> The components of an airport, the airfield. Navigational aids (NAVAIDS) located on airfields; Air traffic control and surveillance facilities located on the airfield; Weather reporting facilities located on airfields; Security infrastructure on airfields; Airspace and air traffic control: Brief history of air traffic control; The basics of air traffic control; Current and future enhancements to air traffic control; Airport terminals and ground access: The historical development of airport terminals; Components of the airport terminal; Airport ground access</p>	<b>08 Hours/ L2</b>
<p><b>Module 3: AIRPORT OPERATIONS AND FINANCIAL MANAGEMENT</b> Airport operations management: Introduction, pavement management, aircraft rescue and firefighting (ARFF); Snow and ice control, safety inspection programs. Bird and wildlife hazard management; Airport security: Security at commercial service airports, security at general aviation airports; the future of airport security</p>	<b>08 Hours/ L2</b>

Bing

<p><b>Module 4: AIRPORT FINANCIAL MANAGEMENT</b>  Airport financial accounting, revenue strategies at commercial airports, pricing of airport facilities and services, variation in the sources of operating revenues, rise in airport financial burdens, airport funding, grant programs, airport financing, private investment sale of the airport.</p>	<p><b>10 Hours/L2</b></p>
<p><b>Module 5: AIRPORT CAPACITY AND DELAY</b>  Defining capacity, factors affecting capacity and delay, estimating capacity, analytical estimates of delay: The queuing diagram; The future of airport management: Introduction, restructuring of commercial air carriers, new large aircraft and small aircraft transportation systems. restructuring of commercial air carriers, new large aircraft and small aircraft transportation systems.</p>	<p><b>08 Hours/ L2</b></p>

**COURSE OUTCOMES:**

**Upon completion of this course, student will be able to:**

<b>CO653.1</b>	Explain the typical operations of airports from a management perspective
<b>CO653.2</b>	Identify the economic, political and social role of airports
<b>CO653.3</b>	Describe the airport operations
<b>CO653.4</b>	Discuss the airport financial management
<b>CO653.5</b>	Explain and defining capacity, factors affecting capacity and delay

**SEMESTER VI  
OPEN ELECTIVE-I**

**COURSE: AIRLINE INDUSTRY**

<b>Course Code</b>	<b>22ANE654</b>	<b>CIE Marks</b>	<b>50</b>
<b>Hours/Week (L: T: P)</b>	<b>3:0:0</b>	<b>SEE Marks</b>	<b>50</b>
<b>No. of Credits</b>	<b>3</b>	<b>Examination Hours</b>	<b>03</b>

**Course Objectives:** To enable students to apply the knowledge of airline industry in broad domain of Aeronautical Engineering by making them to learn:

<b>CLO1</b>	Understand the history, stakeholders, and contemporary challenges of the airline industry
<b>CLO2</b>	Analyze various airline business models and strategies, including pricing, revenue management, and alliances.
<b>CLO3</b>	Explore aircraft fleet management, flight operations, airport procedures, and safety protocols.
<b>CLO4</b>	Examine airline cost structures, financial metrics, revenue sources, and profitability strategies.
<b>CLO5</b>	Understand airline industry regulation, international agreements, environmental considerations, and emerging trends

<b>Content</b>	<b>No. of Hours/ RBT levels</b>
<p><b>Module 1: INTRODUCTION TO THE AIRLINE INDUSTRY</b>            Overview of the airline industry, including its historical development.            Key players in the industry, such as airlines, airports, and regulatory bodies.            Trends and challenges in the airline industry, including globalization and deregulation</p>	<b>08 Hours/ L3</b>
<p><b>Module 2: AIRLINE BUSINESS MODELS AND STRATEGIES</b>            Different types of airline business models (full-service carriers, low-cost carriers, regional airlines).            Airline pricing strategies, revenue management, and fare structures.            Marketing and branding in the airline industry.            Strategic alliances and partnerships among airlines.</p>	<b>08 Hours/ L3</b>
<p><b>Module 3: AIRLINE OPERATIONS AND MANAGEMENT</b>            Aircraft fleet planning and management.            Flight operations, including scheduling and route planning.            Airport operations and ground handling.            Maintenance, repair, and overhaul (MRO) of aircraft.            Safety and security considerations in airline operations.</p>	<b>08 Hours / L3</b>
<p><b>Module 4: AIRLINE ECONOMICS AND FINANCE</b>            Cost structures in the airline industry, including fixed and variable costs.            Financial performance metrics (load factor, yield, revenue per available seat mile).            Sources of revenue (passenger revenue, ancillary revenue).            Financial challenges and strategies for profitability.</p>	<b>10 Hours / L3</b>

<b>Module 5: REGULATION AND INTERNATIONAL AVIATION</b> Airline regulation and government oversight. International agreements and organizations governing air travel (IATA, ICAO). Environmental and sustainability issues in aviation. Emerging trends in the airline industry, such as the impact of new technologies and changing passenger preferences.	<b>08 Hours/ L3</b>
--	---------------------

**COURSE OUTCOMES:**

**Upon completion of this course, student will be able to:**

<b>CO654.1</b>	Develop a comprehensive understanding of the evolution, key players, and current trends in the airline industry.
<b>CO654.2</b>	Compare different airline business models, assess pricing strategies, and recognize the importance of alliances in the airline industry
<b>CO654.3</b>	Gain insight into fleet planning, flight scheduling, airport operations, and safety measures in airline operations.
<b>CO654.4</b>	Analyze cost components, financial metrics, revenue streams, and propose financial strategies for airlines
<b>CO654.5</b>	Explain regulatory frameworks, international agreements' impact, sustainability issues, and anticipate future industry trends.

**Textbooks:**

2. Peter S. Morrell, Airline Finance, Routledge, 5th Edition, 2021
3. Charles E. Harris and Robert W. Kaps, International Aviation
4. T. R. Lakshmanan and Vijay Kumar, Sustainable Aviation

**Scheme of Examination:**

**Semester End Examination (SEE):**

**SEE Question paper is to be set for 100 marks and the marks scored will be proportionately reduced to 50.** There will be two full questions (with a maximum of four sub questions) from each module carrying 20 marks each. Students are required to answer any **five full questions** choosing at least **one full question from each module.**

**Continuous Internal Evaluation (CIE):**

Three Tests are to be conducted for **40 marks each**. CIE is executed by way of quizzes / Alternate Assessment Tools (AATs) for 10 marks

**Table 1: Distribution of weightage for CIE & SEE of Regular courses**

	Component	Marks	Total Marks
CIE	CIE Test-1	40	50

## SEMESTER-VI

### COURSE: ENVIRONMENTAL SCIENCE

Course Code	22CIV66	CIE Marks	50
Hours/Week (L: T: P)	1:0:0	SEE Marks	50
No. of Credits	1	Examination Hours	01

#### Course Learning Objectives:

<b>CLO1</b>	The fundamentals of environmental science.
<b>CLO2</b>	The types of natural resources
<b>CLO3</b>	The various global environmental concerns.
<b>CLO4</b>	The types of wastes generated and their handling at a basic level
<b>CLO5</b>	The area of environmental law and policies with a few important acts in the field

CONTENT	No. of Hours/RBT levels
<b>Module 1</b>	
<b>Environment:</b> <ul style="list-style-type: none"> <li>• Definition, scope &amp; importance</li> <li>• Components of Environment Ecosystem: Structure and function of various types of ecosystems</li> <li>• Human Activities – Food, Shelter, and Economic &amp; Social Security.</li> <li>• Population - Growth, variation among nations – population explosion and impact on environment</li> </ul> Biodiversity: Types, Value, Hot spots, Threats and Conservation of biodiversity, Fore Wealth, and Deforestation.	<b>04 Hours / L2</b>
<b>Module 2</b>	
<b>Natural Resources:</b> Forest, Water, Mineral, Food, Energy, Land Environmental Pollution - Definition – causes, effects and control measures of: (a) Air pollution (b) Water pollution (c) Soil pollution (d) Marine pollution (e) Noise pollution (f) Thermal pollution (g) Nuclear hazards.	<b>04 Hours / L2</b>
<b>Module 3</b>	
<b>Global Environmental Concerns</b> (Concept, policies and case-studies): Ground water depletion/recharging, Climate Change; Acid Rain; Ozone Depletion; Radon and Fluoride problem in drinking water; Resettlement and rehabilitation of people, Environmental Toxicology.	<b>04 Hours / L2</b>
<b>Module 4</b>	
<b>Sources:</b> Sources of Solid waste, Types of solid waste, Physical and Chemical composition of municipal solid waste. Solid Waste Management Rules in India, Sources and management of E – Waste, Biomedical Waste, Hazardous waste, and construction waste at individual and community level. Socio-economic aspect of waste management Environmental Toxicology.	<b>04 Hours / L2</b>
<b>Module 5</b>	
<b>Latest Developments in Environmental Pollution Mitigation Tools</b> (Concept and Applications): Environment Impact Assessment, Environmental Management Systems, ISO14001; Environmental Stewardship, NGOs.	<b>04 Hours / L2</b>

#### COURSE OUTCOMES:

**Upon completion of this course, student will be able to:**

<b>CO57.1</b>	Understand holistically the key concepts “Environment”, and “Biodiversity”.
<b>CO57.2</b>	Classify the types of natural resources available and the effects of anthropogenic intervention
<b>CO57.3</b>	Express the gravity of various global environmental concerns.
<b>CO57.4</b>	Categorize the types of wastes generated and their handling at a basic level.
<b>CO57.5</b>	Understand the importance of environmental law and policies.

**Textbooks:**

## SEMESTER –VI

### COURSE: UNIVERSAL HUMAN VALUES

Course Code	22UHV66	CIE Marks	50
Hours/Week (L: T: P)	1:0:0	SEE Marks	50
No. of Credits	1	Examination Hours	01

#### Course Objectives:

CLO1	To create an awareness on Engineering Ethics and Human Values.
CLO2	To understand social responsibility of an engineer.
CLO3	To appreciate ethical dilemma while discharging duties in professional life.

Content	No. of Hours
<p style="text-align: center;"><b>Module 1</b></p> <p><b>Introduction to Value Education</b></p> <ul style="list-style-type: none"><li>• Value Education, Definition, Concept and Need for Value Education.</li><li>• The Content and Process of Value Education.</li><li>• Basic Guidelines for Value Education,</li><li>• Self-exploration as a means of Value Education.</li><li>• Happiness and Prosperity as parts of Value Education.</li></ul>	<b>05 Hours</b>
<p style="text-align: center;"><b>Module 2</b></p> <p><b>Harmony in the Human Being</b></p> <ul style="list-style-type: none"><li>• Human Being is more than just the Body.</li><li>• Harmony of the Self ('I') with the Body.</li><li>• Understanding Myself as Co-existence of the Self and the Body.</li><li>• Understanding Needs of the Self and the needs of the Body.</li><li>• Understanding the activities in the Self and the activities in the Body.</li></ul>	<b>05 Hours</b>
<p style="text-align: center;"><b>Module 3</b></p> <p><b>Harmony in the Family and Society and Harmony in the Nature</b></p> <ul style="list-style-type: none"><li>• Family as a basic unit of Human Interaction and Values in Relationships.</li><li>• The Basics for Respect and today's Crisis: Affection, Guidance, Reverence, Glory, Gratitude and Love,</li><li>• Comprehensive Human Goal: The Five Dimensions of Human Endeavour.</li><li>• Harmony in Nature: The Four Orders in Nature.</li><li>• The Holistic Perception of Harmony in Existence.</li></ul>	<b>05 Hours</b>

*Big*

<b>Module 4</b>	<b>05 Hours</b>
<b>Social Ethics</b> <ul style="list-style-type: none"> <li>• The Basics for Ethical Human Conduct, Defects in Ethical Human Conduct.</li> <li>• Holistic Alternative and Universal Order,</li> <li>• Universal Human Order and Ethical Conduct.</li> <li>• Human Rights violation and Social Disparities.</li> </ul>	
<b>Module 5</b>	<b>05 Hours</b>
<b>Professional Ethics</b> <ul style="list-style-type: none"> <li>• Value based Life and Profession., Professional Ethics and Right Understanding.</li> <li>• Competence in Professional Ethics.</li> <li>• Issues in Professional Ethics – The Current Scenario.</li> <li>• Vision for Holistic Technologies</li> <li>• Production System and Management Models.</li> </ul>	

### **COURSE OUTCOMES:**

**Upon completion of this course, student will be able to:**

<b>CO1</b>	Understand the significance of value inputs in a classroom and start applying them in their life and profession
<b>CO2</b>	Distinguish between values and skills, happiness and accumulation of physical facilities, the Self and the Body, Intention and Competence of an individual, etc.
<b>CO3</b>	Understand the role of a human being in ensuring harmony in society and nature.
<b>CO4</b>	Distinguish between ethical and unethical practices and start working out the strategies to actualize a harmonious environment wherever they work.

### **Textbooks:**

## SEMESTER – VII

### COURSE: FLIGHT SIMULATION LAB

Course Code	22ANEL67	CIE Marks	50
Hours/Week (L: T: P)	0:0:2	SEE Marks	50
No. of Credits	1	Examination Hours	03

#### Course Learning Objectives:

<b>CLO1</b>	Plot the root locus and bode plot
<b>CLO2</b>	Calculate the dynamic response of aircraft
<b>CLO3</b>	Use computational tools to model aircraft trajectory.

S.No	LIST OF EXPERIMENTS	RBT LEVELS
1	Draw Pole-Zero map of dynamic system model with plot customization option	L3
2	Plot root locus with variables in transfer function through MATLAB	L3
3	Plot root locus for a dynamic system through MATLAB	L3
4	Draw Bode plot from a transfer function in MATLAB and explain the gain and phase margins	L3
5	Simulate a spring- mass- damper system with and without a forcing function through SIMULINK	L3
6	Simulate a bomb drop from an aircraft on a moving tank in pure pursuit motion	L3
7	Develop a straight and level flight simulation program using MATLAB	L3
8	Simulate aircraft Take-off and Landing with trajectory tracing	L3
9	Simulate stall of aircraft and show the effect of variation in static margin on stalling characteristics	L3
10	Simulate aircraft longitudinal motion and demonstrate the effect of static margin variation for a pulse input in pitch that is intended to bleed the airspeed.	L3
11	Simulate aircraft longitudinal motion and demonstrate the effect of static margin variation for a doublet input in pitch.	L3
12	Given a Quartic characteristic equation, determine two quadratics that shall result in poles of short period oscillations and poles of Phugoid. Vary the coefficients of polynomial to study the movement of poles.	L3
13	Given a Quartic characteristics equation, determine Poles and Time constants for Roll mode, Spiral motion, and Dutch roll. Vary the coefficients of polynomial to study the movement of poles	L3

#### COURSE OUTCOMES:

**Upon completion of this course, student will be able to:**

<b>CO77.1</b>	Plot the root locus and bode plot
<b>CO77.2</b>	Calculate the dynamic response of aircraft
<b>CO77.3</b>	Use computational tools to model aircraft trajectory.

**Scheme of Examination:**

Semester End Examination (SEE): Distribution of weightage for SEE of Regular courses

	Component	Marks	Total Marks
SEE	PART- A	20	50
	PART- B	20	
	VIVA-VOCE	10

## SEMESTER VI

### COURSE: MINI-PROJECT

<b>Course Code</b>	<b>22ANEM68</b>	<b>CIE Marks</b>	<b>50</b>
<b>Hours/Week (L: T: P)</b>	<b>0:0:4</b>	<b>SEE Marks</b>	<b>50</b>
<b>No. of Credits</b>	<b>2</b>	<b>Examination Hours</b>	<b>03</b>

**Mini-project work:** Based on the ability/abilities of the student/s and recommendations of the mentor, a single discipline or a multidisciplinary Mini- project can be assigned to an individual student or to a group having not more than 4 students.

Individual student performance is evaluated based on the following COs:

<b>CO68.1</b>	Able to make comprehensive use of the technical knowledge gained from previous courses
<b>CO68.2</b>	Able to understand technologies concerned with the project
<b>CO68.3</b>	Able to apply project management skills (scheduling work, procuring parts and documenting expenditures and working within the confines of a deadline).
<b>CO68.4</b>	Able to analyze, develop and demonstrate the proposed work
<b>CO68.5</b>	Able to communicate technical information by means of ethical writing and presentation.

#### **CIE procedure for Mini-Project:**

a. **Single discipline:** The CIE marks shall be awarded by a committee consisting of the Head of the concerned Department and two senior faculty members of the Department, one of whom shall be the Guide.

The CIE marks awarded for the Mini-project work shall be based on the evaluation of project report, project presentation skill and question and answer session in the ratio 50:25:25. The marks awarded for the project report shall be the same for all the batch mates.

b. **Interdisciplinary:** Continuous Internal Evaluation shall be group wise at the college level with the participation of all the guides of the college. The CIE marks awarded for the Mini-Project shall be based on the evaluation of project report, project presentation skill and question and answer session in the ratio 50:25:25. The marks awarded for the project report shall be the same for all the batch mates.

#### **SEE for Mini-Project:**

a. **Single discipline:** Contribution to the Mini-project and the performance of each group member shall be assessed individually in the semester end examination (SEE) conducted at the department.

b. **Interdisciplinary:** Contribution to the Mini-project and the performance of each group member shall be assessed individually in semester end examination (SEE) conducted separately at the departments to which the student/s belong.

Typical Evaluation pattern for regular courses is shown in Table 1.

**Table 1: Distribution of weightage for CIE & SEE of Regular courses**

	Component	Marks	Total Marks
CIE	Review-1	50	50
	Review-2		
SEE	Semester End Examination	50	50

## VII Semester Syllabus

Head of the Department  
Dept. of Aeronautical Engineering  
Global Academy of Technology  
R.R. Nagar, Bengaluru - 560 098.

## SEMESTER – VII

### COURSE: AIRCRAFT STABILITY AND CONTROL

<b>Course Code</b>	<b>22ANE71</b>	<b>CIE Marks</b>	<b>50</b>
<b>Hours/Week (L: T: P)</b>	<b>3:0:0</b>	<b>SEE Marks</b>	<b>50</b>
<b>No. of Credits</b>	<b>3</b>	<b>Examination Hours</b>	<b>03</b>

**Pre-requisite:** Aircraft Performance

**Course Objectives:** To enable students to apply the knowledge of Aircraft Stability and Control in broad

domain of aeronautical engineering by making them to learn:

<b>CLO1</b>	To impart knowledge on the criteria for longitudinally stable configuration.
<b>CLO2</b>	To provide the aspects of weathercock stability and requirements of rudder.
<b>CLO3</b>	To impart knowledge on dihedral effect and aileron control power.
<b>CLO4</b>	To provide the methodology to obtain the characteristic modes of an airplane in longitudinal motion.
<b>CLO5</b>	To impart knowledge on autorotation and spin and Dutch roll motions of airplanes.

Content	No. of Hours/RBT levels
<p><b>Module 1: STATIC LONGITUDINAL STABILITY AND CONTROL</b>                      General concepts-Degrees of freedom of a rigid body, Static and dynamic stability, Need for stability in an airplane, inherently and marginally stable airplanes, Stability and Controllability, Requirements of control surfaces, criteria for longitudinal static stability, contribution to stability by wing, tail, fuselage, wing fuselage combination, Total longitudinal stability, Neutral point-Stick fixed and Stick free aspects, Free elevator factor, static margin, Hinge moment, Power effects on stability-propeller and jet aircrafts, longitudinal control, Movement of centre of gravity, elevator control effectiveness, elevator control power, elevator angle to trim, elevator angle per g, maneuver point, Stick force gradient and stick force per g, Aerodynamic balancing.</p>	<b>10 Hours/ L3</b>
<p><b>Module 2: STATIC DIRECTIONAL STABILITY AND CONTROL</b>                      Directional stability-yaw and sideslip, Criterion of directional stability, contribution to static directional stability by wing, fuselage, tail, Power effects on directional stability-propeller and jet aircrafts, Rudder fixed and rudder free aspects, Rudder lock and Dorsal fin, Directional control, rudder control effectiveness, rudder requirements, adverse yaw, asymmetric power condition, spin recovery.</p>	<b>10 Hours/ L3</b>
<p><b>Module 3: STATIC LATERAL STABILTY AND CONTROL</b>                      Lateral Stability-Dihedral effect, criterion for lateral stability, evaluation of lateral stability contribution of fuselage, wing, wing fuselage, tail, total static lateral stability, lateral control, aileron control power, aileron effectiveness, strip theory estimation of aileron effectiveness, roll control by spoilers, aileron reversal, aileron reversal speed</p>	<b>10 Hours/ L3</b>

<b>Module 4: DYNAMIC LONGITUDINAL STABILITY</b> Aircraft Equations of motion, small disturbance theory, Estimation of longitudinal stability derivatives stability derivatives, Routh's discriminant, solving the stability quadratic, Phugoid motion, Factors affecting the period and damping.	<b>10 Hours/ L3</b>
<b>Module 5: DYNAMIC LATERAL AND DIRECTIONAL STABILITY</b> Dutch roll and spiral instability, Auto rotation and spin, Stability derivatives for lateral and directional dynamics.	<b>08 Hours/ L3</b>

**COURSE OUTCOMES:**

**Upon completion of this course, student will be able to:**

<b>CO71.1</b>	Obtain static margin of airplane in stick fixed and free aspects.
<b>CO71.2</b>	Understand the design concept of rudder by considering the critical situations that demand the use of rudder.
<b>CO71.3</b>	Estimate total lateral stability of an airplane.
<b>CO71.4</b>	Determine the natural frequency and damping ratio of Phugoid and short period motions.
<b>CO71.5</b>	Explain the recovery procedure of an airplane from dangerous situations like autorotation and spin.

**Textbooks:**

1. Nelson, R.C. Flight Stability & Automatic Control, McGraw Hill, 1998.
2. Perkins C.D. & Hage R.E. Airplane performance, stability and control, John Wiley & Sons 1967.

**Reference books:**

2. Etkin, B., Dynamics of Flight Stability and Control, Wiley, third edition 1995.
3. McCormick, B.W. Aerodynamics, Aeronautics & Flight Mechanics John Wiley, 1995.
4. Pamadi, B.N. Performance, Stability, Dynamics, and Control of Airplanes, AIAA Education Series, 2004.

**Scheme of Examination:**

**Semester End Examination (SEE):**

**SEE Question paper is to be set for 100 marks and the marks scored will be proportionately reduced to 50.** There will be two full questions (with a maximum of four sub questions) from each module carrying 20 marks each. Students are required to answer any **five full questions** choosing at least **one full question from each module.**

**Continuous Internal Evaluation (CIE):**

Three Tests are to be conducted for **40 marks each**. CIE is executed by way of quizzes / Alternate Assessment Tools (AATs) for 10 marks

## SEMESTER – VII

### COURSE: AVIONICS

<b>Course Code</b>	<b>22ANE72</b>	<b>CIE Marks</b>	<b>50</b>
<b>Hours/Week (L: T: P)</b>	<b>3:0:0</b>	<b>SEE Marks</b>	<b>50</b>
<b>No. of Credits</b>	<b>3</b>	<b>Examination Hours</b>	<b>03</b>

**Pre-requisite:** NIL

**Course Objectives:** To enable students to apply the knowledge of Avionics in broad domain of Aeronautical Engineering by making them to learn:

<b>CLO1</b>	To know about the basics of avionics and its need for civil and military aircrafts
<b>CLO2</b>	To impart knowledge about the avionic architecture and various avionics data buses
<b>CLO3</b>	Knowledge on various avionics subsystems
<b>CLO4</b>	Learn about different navigation systems
<b>CLO5</b>	Learn about air data systems and auto pilot

Content	No. of Hours/RBT levels
<b>MODULE 1: INTRODUCTION TO DIGITAL ELECTRONICS</b> Logic Gates, Boolean Algebra, Encoders, Decoders, Multiplexer and Demultiplexer, Microprocessor-Introduction to VLSI. Antenna-types, radiation pattern, voltage and current distribution, polarization. Introduction to digital computer and memories.	<b>08 Hours/L2</b>
<b>MODULE 2: INTRODUCTION TO AVIONICS</b> Need for avionics, Typical avionics subsystems, design, technologies –Avionics Bus Architecture-Digital Data Buses, Fiber Optic Buses, integrated avionics and weapon systems.	<b>08 Hours/L2</b>
<b>MODULE 3: FLIGHT SENSORS AND DISPLAYS</b> Air Data Sensing, Air Data Computer, Magnetic Sensing – Magnetic Heading Reference System (MHRS), Inertial Sensing, Radar Altimeter (RADALT), Doppler Radar, Weather Radar - Cathode Ray Tube (CRT), Active Matrix Liquid Crystal Display (AMLCD), Head Down Display (HDD), Head Up Display (HUD), Helmet Mounted Display (HMD), Integrated Standby Instrument System (ISIS). Direct voice input (DVI), Touch Screen, HOTAS.	<b>08 Hours/L2</b>
<b>MODULE 4: COMMUNICATION AND AUTOMATIC FLIGHT CONTROL</b> HF, U/VHF, Satellite Communication, Selcal, Air Traffic Control (ATC) Transponder, Traffic Collision & Avoidance System (TCAS), Identification of Friend & Foe (IFF). Emergency locator transmitters Longitudinal, Lateral & Direction Autopilot.	<b>08 Hours/L2</b>

<b>MODULE 5: NAVIGATION</b> Automatic Direction Finding, Very High Frequency Omni-Range (VOR), Distance Measuring Equipment (DME), Tactical Air Navigation (TACAN), VORTAC (VOR+TACAN), Hyperbolic navigation, Satellite Navigation System-Global Positioning System (GPS), Differential GPS, Instrument Landing System (ILS), Transponder Landing System (TLS), Microwave Landing System (MLS), Astronavigation.	<b>10 Hours/L2</b>
--	--------------------

**COURSE OUTCOMES:**

**Upon completion of this course, student will be able to:**

<b>CO72.1</b>	Describe the need for avionics in civil and military aircraft.
<b>CO72.2</b>	Understand about modern Aviation and avionics architecture.
<b>CO72.3</b>	Familiarize about control and display technologies used
<b>CO72.4</b>	Describe about the different navigation systems
<b>CO72.5</b>	Identify and understand the use of air data systems and auto pilot

**Textbooks:**

1. Civil Avionics Systems: Ian Moir, Allan Seabridge, AIAA Education Series.
2. Aircraft System: Ian Moir & Allan Seabridge, John Wiley.
3. Aircraft Electricity & Electronics: T.K. Eismen, Macmillan.
4. Geroge Kannedy: Electronic Communication System, McGraw Hill.
5. Myron Kayton and Walter R fried, Avionics Navigation Systems, John Wiley and Sons.
6. J. Powell: Aircraft Radio Systems, Himalayan Books, 1990.
7. L Tetley and D Calcutt, Electronic Aids to Navigation, Edward Arnold Publishers Ltd.

**Scheme of Examination:**

**Semester End Examination (SEE):**

**SEE Question paper is to be set for 100 marks and the marks scored will be proportionately reduced to 50.** There will be two full questions (with a maximum of four sub questions) from each module carrying 20 marks each. Students are required to answer any **five full questions** choosing at least **one full question from each module.**

**Continuous Internal Evaluation (CIE):**

Three Tests are to be conducted for **40 marks each.** CIE is executed by way of quizzes / Alternate Assessment Tools (AATs) for 10 marks.

## SEMESTER – VII

### COURSE: COMPUTATIONAL FLUID DYNAMICS

Course Code	22ANE73	CIE Marks	50
Hours/Week (L: T: P)	3:0:2	SEE Marks	50
No. of Credits	4	Examination Hours	03

**Course Learning Objectives:** Enable students to gain a comprehensive understanding of CFD theory, its mathematical foundations, and practical applications, enabling them to solve complex fluid dynamics problems using computational methods.

<b>CLO1</b>	Understand the Fundamentals of CFD, Derive the Governing Equations, Explore Shock Capturing and Shock Fitting methods
<b>CLO2</b>	Classify Partial Differential Equations (PDEs), Analyse their Case Studies
<b>CLO3</b>	Understand Finite Difference Methods, Explore Time and Space Marching, Implement Numerical Schemes
<b>CLO4</b>	Recognize Grid Generation Methods, Explore Structured/Unstructured Grids, Evaluate Grid Quality and Adaptive Grids:
<b>CLO5</b>	Understand finite volume techniques, applications and their solution schemes

CONTENT	No. of Hrs /RBT Levels
<b>MODULE-1: INTRODUCTION AND GOVERNING EQUATIONS</b> CFD ideas to understand, CFD Application, Need for high-speed Parallel Computing, Substantial derivative, Divergence of velocity, Flow models, Continuity Equation, Momentum Equation, and Energy Equations in various forms. Physical Boundary conditions. Shock capturing, Shock fitting.	<b>8 Hours</b> L1, L2
<b>MODULE-2: MATHEMATICAL BEHAVIOUR OF PARTIAL DIFFERENTIAL EQUATIONS:</b> Classification of partial differential equations – Cramer Rule, Eigenvalue method. Hyperbolic, parabolic, and elliptic form of equations. Impact of classification on physical and computational fluid dynamics. Case studies-steady inviscid supersonic flow, unsteady inviscid flow, steady boundary layer flow, unsteady thermal conduction, and steady subsonic inviscid flow.	<b>10 Hours</b> L2,L3
<b>MODULE-3: DISCRETIZATION TECHNIQUES</b> Finite differences methods, and difference equations. Explicit and Implicit Approach Errors and stability analysis. Time marching and space marching. Reflection boundary condition. Relaxation techniques. Successive over relaxation/under relaxation. Second order Lax-Wendroff method, mid-point Leap frog method, Alternating Direction Implicit (ADI) Method, upwind scheme, numerical viscosity, and artificial viscosity.	<b>8 Hours</b> L2,L3, L4
<b>MODULE-4: GRID GENERATION AND ADAPTIVE GRID METHODS</b> Need for grid generation and Body-fitted coordinate system. Structured Grids-essential features. Structured Grid generation techniques- algebraic	<b>8 Hours</b> L2,L3

and numerical methods. Unstructured Grids-essential features. Unstructured Grid generation techniques- Delaunay-Voronoi diagram, Advancing Front Method (AFM). multi-block grid generation, Surface grid generation, multi-block grid generation, and meshless methods. Grid quality, adaptive grids and Adaptive Structured Grid Generation, Unstructured adaptive grid Methods.	
<b>MODULE-5: FINITE VOLUME TECHNIQUES AND APPLICATION</b> Spatial discretization- cell centered and cell vertex techniques (overlapping control volume, dual control volume). Temporal discretization- Explicit time stepping, and implicit time stepping. Time step calculation. Applications: Aspects of numerical dissipation & dispersion. Approximate factorization, Flux Vector splitting. Diffusion problem	<b>8 Hours</b> <b>L2,L3</b>

### LIST OF EXPERIMENTS

S.N	List of Experiments	RBT Levels
1	Grid Generation over a 2D airfoil geometry	L4
2	Flow analysis through Parallel Plates	L4
3	Viscous Flow analysis over a Circular cylinder at low Reynolds Number (2D)	L4
4	Flow analysis over a 3D Finite wing Structure	L4
5	To simulate the characteristics of swept wings	L4
6	To simulate and analyse the flow through nozzles	L4
7	To simulate and analyse the flow through diffusers	L4
8	To simulate and analyse convergent-divergent passages	L4
9	To simulate normal shock waves oblique shock waves, and expansion waves for Internal flows	L4
10	To simulate bow shock, oblique shock waves, and expansion waves for External flows	L4

### COURSE OUTCOMES:

Upon completion of this course, student will be able to:

<b>CO73.1</b>	Comprehend the fundamental concepts of CFD and derive basic Governing Equations.
<b>CO73.2</b>	Assimilate Mathematical behavior of PDEs vis a vis nature of flow
<b>CO73.3</b>	Analyze FDM techniques for Time/Space marching and numerical schemes.
<b>CO73.4</b>	Describe Grid generation and utilization techniques.
<b>CO73.5</b>	Apply Spatial/Temporal discretization in FVM applications.

### **Scheme of Examination:**

#### **Semester End Examination (SEE):**

**SEE Question paper is to be set for 100 marks and the marks scored will be proportionately reduced to 50.** There will be two full questions (with a maximum of four sub questions) from each module carrying 20 marks each. Students are required to answer any **five full questions** choosing at least **one full question from each module.**

#### **Continuous Internal Evaluation (CIE):**

Three Tests are to be conducted for 40 marks each. The average of the three tests are taken for computation of CIE-on a scale of 30, the CIE would also include laboratory evaluation for 20 marks. The laboratory marks of 20 would comprise of 10 marks for regular laboratory assessment to include lab record and observation. 10 marks would be exclusive for laboratory internal assessment test to be conducted at the end of the semester

Table1: Distribution of weightage for CIE & SEE of Regular courses

	Component	Marks	Total Marks

**COURSE: HEAT TRANSFER**

Course Code	22ANE741	CIE Marks	50
Hours/Week (L: T: P)	3:0:0	SEE Marks	50
No. of Credits	3	Examination Hours	03

**Pre requisite:** Thermodynamics

**Course Learning Objectives:** To enable students to apply the knowledge of Heat and Mass Transfer in broad domain of aeronautical engineering by making them to learn:

<b>CLO1</b>	Develop a comprehensive understanding of the various modes of heat and mass transfer
<b>CLO2</b>	Derive and analyze the three-dimensional heat conduction equation in different coordinate systems
<b>CLO3</b>	Gain expertise in solving convection problems
<b>CLO4</b>	Acquire knowledge of radiation heat transfer mechanisms
<b>CLO5</b>	Apply heat transfer principles to aerospace-related scenarios

Content	No. of Hours/RBT levels
<b>Module 1: FUNDAMENTALS OF HEAT AND MASS TRANSFER</b> Different modes of heat transfer and mass and momentum transfer, elements of mass diffusion and boundary layer theory. Mass transfer definition and terms used in mass transfer analysis, Fick's First law of diffusion.	<b>08 Hours /L3</b>
<b>Module 2: CONDUCTION</b> Derivation of general three-dimensional conduction equation in Cartesian coordinate, discussion on 3-D conduction in cylindrical and spherical coordinate systems. Effect of variation of thermal conductivity on heat transfer in solids - Heat transfer problems in infinite and semi- infinite solids. Significance of Biot and Fourier Numbers, Chart solutions of transient conduction systems.	<b>08 Hours /L3</b>
<b>Module 3: CONVECTION</b> Concepts of Continuity, Momentum and Energy Equations. Dimensional Analysis-Buckingham's Pi Theorem - Application for developing non-dimensional correlation for convective heat transfer. <b>FREE CONVECTION:</b> Development of Hydrodynamic and thermal boundary layer along a vertical plate, Use of empirical relations for Vertical plates and pipes. <b>FORCED CONVECTION:</b> External Flows, Concepts of hydrodynamic and thermal boundary layer and use of empirical correlations for Flat plates and Cylinders. Internal Flows, Concepts about Hydrodynamic and Thermal Entry Lengths, use of empirical correlations for Horizontal Pipe Flow and annulus flow.	<b>10 Hours /L3</b>

<b>Module 4: RADIATION &amp; HEAT EXCHANGERS DESIGN</b> Radiation: Introduction to physical mechanism - Radiation properties - Radiation shape factors - Heat exchange between non-black bodies - Radiation shields. Heat transfer coefficient, fouling and fouling factor; LMTD, Effectiveness-NTU methods of analysis of heat exchangers. Numerical problems.	<b>08 Hours /L3</b>
<b>Module 5: HEAT TRANSFER PROBLEMS IN AEROSPACE ENGINEERING</b> Heat transfer problems in gas turbine combustion chambers - Rocket thrust chambers - Aerodynamic heating -Ablative heat transfer. Heat transfer problems in turbine and nozzle blades.	<b>08 Hours /L3</b>

### **COURSE OUTCOMES:**

**Upon completion of this course, student will be able to:**

<b>CO741.1</b>	Describe the fundamentals of heat and mass transfer
<b>CO741.2</b>	Apply conduction heat transfer concept to all solids, extended surfaces
<b>CO741.3</b>	Calculate free and forced convective heat transfers on various geometries
<b>CO741.4</b>	Explain various radiation properties and Illustrate different types of heat exchangers
<b>CO741.5</b>	Apply and analyse the concepts to various aerospace applications

### **Textbooks:**

1. Ozisik, "Heat transfer-A basic approach", Tata McGraw Hill, 2002
2. Holman, J.P, "Heat Transfer", McGraw Hill Book Co., Inc., New York, 8<sup>th</sup> edition,1996.

PROGRAM ELECTIVE 3**

**COURSE: SPACE MECHANICS**

<b>Course Code</b>	<b>22ANE742</b>	<b>CIE Marks</b>	<b>50</b>
<b>Hours/Week (L: T: P)</b>	<b>3:0:0</b>	<b>SEE Marks</b>	<b>50</b>
<b>No. of Credits</b>	<b>3</b>	<b>Examination Hours</b>	<b>03</b>

**Course Learning Objectives:**

<b>CLO1</b>	To introduce the basic concepts of astronomy
<b>CLO2</b>	To understand the motion of the space craft in their relative gravitational field
<b>CLO3</b>	Learn about the satellite injection and perturbation in various orbits
<b>CLO4</b>	To provide insight of interplanetary spacecraft mission.
<b>CLO5</b>	Understand the Ballistic Missile Trajectories and Re-entry phase.

<b>Content</b>	<b>No. of Hours/ RBT levels</b>
<p><b>Module 1: INTRODUCTION TO SPACE MECHANICS</b> Basic concepts: The solar system, Reference frames and coordinate systems, The celestial sphere, The ecliptic, Motion of vernal equinox, Sidereal time, Solar Time, Standard Time, The earth 's atmosphere.</p>	<b>08 Hours/L3</b>
<p><b>Module 2: THE GENERAL N- BODY PROBLEM</b> Conic Sections, Two-Body Problem, Conservation of Angular Momentum and Energy, Kepler's laws of planetary motion and proof of the laws, Trajectory Equation, Elliptical Orbit, Circular Orbit, Parabolic Trajectory, Hyperbolic Trajectory, the circular restricted three body problem– the general N-body problem.</p>	<b>10 Hours/L3</b>
<p><b>Module 3: SATELLITE INJECTION AND SATELLITE PERTURBATIONS</b> Classical Orbital Elements, Time of Flight, General aspects of satellite injection – satellite orbit transfer, Hohmann Transfer – orbit deviations due to injection errors – special and general perturbations – method of variations of orbital elements.</p>	<b>08 Hours/L3</b>
<p><b>Module 4: INTERPLANETARY TRAJECTORIES</b> Introduction, Patched-Conic Method, concept of sphere of influence – launch of interplanetary spacecraft – trajectory estimation about the target planet, Phase Angle at Departure, Planetary Arrival, Gravity Assists.</p>	<b>08 Hours/L3</b>
<p><b>Module 5: ATMOSPHERIC ENTRY</b> Introduction to ballistic missile trajectories – Entry Flight Mechanics– Ballistic Entry– Gliding Entry– Skip Entry– Entry Heating– Space Shuttle Entry.</p>	<b>08 Hours/L3</b>

## COURSE OUTCOMES:

Upon completion of this course, student will be able to:

<b>CO742.1</b>	Understand the basic Concepts in Orbital Mechanics and Attitude Dynamics.
<b>CO742.2</b>	Analyze the Orbital motion of a satellite relative to their gravitational body.
<b>CO742.3</b>	Understand the Orbital elements to define the shape, size and orientation of an orbit for satellite injection.
<b>CO742.4</b>	Estimate the trajectory/orbit of a space vehicle or a satellite in a suitable coordinate system.
<b>CO742.5</b>	Understand the Ballistic Missile Trajectories and Re-entry phase.

<b>Hours/Week (L: T: P)</b>	<b>3:0:0</b>	<b>SEE Marks</b>	<b>50</b>
<b>No. of Credits</b>	<b>3</b>	<b>Examination Hours</b>	<b>03</b>

**Pre-requisite:** Aerodynamics, Aerodynamics Lab

**Course Learning Objectives:**

<b>CLO1</b>	Types and techniques of Aerodynamic data generation
<b>CLO2</b>	Theoretical foundation behind experimentation in the various speed ranges corresponding to subsonic, supersonic and hypersonic Mach numbers
<b>CLO3</b>	Classical and state of the art measurement devices and techniques for measurement parameters such as pressure, temperature and velocity.
<b>CLO4</b>	Flow visualization techniques meant for incompressible and compressible flows

<b>Content</b>	<b>No. of Hours/ RBT levels</b>
<p style="text-align: center;"><b>Module 1:</b></p> <p><b>LOW SPEED WIND TUNNELS:</b> Introduction, Wind tunnel- Classification, Applications, Model making, non-dimensional parameters, Low speed wind tunnel-Irregularities of flow in low speed tunnels, Reduction of turbulence, Effect of screens on turbulence, Honey combs, Wind tunnel contractions, The diffuser, Losses in wind tunnel circuit Power requirements – power economy</p>	<b>08 Hours/ L3</b>
<p style="text-align: center;"><b>Module 2</b></p> <p><b>HIGH SPEED WIND TUNNELS:</b> Introduction, Types of high-speed tunnels, Supersonic wind tunnels - Test section flow parameters, Components of supersonic wind tunnels, Power required for the operation of supersonic wind tunnels, Closed circuit supersonic wind tunnel, Actual flow in the supersonic wind tunnel</p>	<b>10 Hours/ L3</b>
<p style="text-align: center;"><b>Module 3</b></p> <p><b>SHOCK TUBES:</b> Introduction to shock tube, Shock tube equations, Comparison between shock heating and isentropic heating, Particle velocity behind moving shock, Dependence of shock strength on diaphragm pressure ratio, Reflected shocks, Viscous effects and the shock tube boundary layer, Observation time in shock tube, Interaction of reflected shock and the contact surface, Shock tube diaphragm and bursting techniques Measurement of shock speed</p>	<b>08 Hours/ L3</b>

<b>Module 4</b>	
<p><b>WIND TUNNEL INSTRUMENTATION:</b></p> <p><b>Measurement of Pressure:</b> Introduction, Manometers, Pressure transducers, Measurement of high pressures, Ranges of different manometers, Measurement of vacuum, Measurement of pressure in flows, Measurement of stagnation or total pressure, Lag in manometric systems</p> <p><b>Measurement of Temperature:</b> Introduction, Expansion thermometer or liquid in glass thermometer (LIG), Change of state thermometers, Electrical resistance thermometry, Thermoelectric thermometry, Temperature measurement problems in flows, Sensors/probes for measuring stagnation temperature</p> <p><b>Measurement of Velocity:</b> Pneumometric methods, Measurement in compressible flows, Measurement of supersonic velocity /Mach number, Hot wire anemometer (HWA)</p>	<b>08 Hours/ L3</b>
<b>Module 5</b>	
<p><b>FLOW VISUALIZATION and NON-INTRUSIVE FLOW DIAGNOSTICS:</b> Introduction, Flow visualization by direct injection (Tracer methods) , Smoke and Tuft grid techniques – Dye injection special techniques – Oil flow visualization, Index of refraction methods, Theoretical background, Deflection of light ray in a medium of constant density gradient ,The schlieren method, Color schlieren, Shadowgraph method ,Interferometer method ,Glow discharge visualization for low density flows</p>	<b>08 Hours/L3</b>

### **COURSE OUTCOMES:**

**Upon completion of this course, student will be able to:**

<b>CO743.1</b>	Summarize the classifications, working principle, design features and power considerations of low speed wind tunnel configurations.
<b>CO743.2</b>	Comprehend/Apply the operational requirements, design features and power considerations of supersonic wind tunnel configurations.
<b>CO743.3</b>	Analyze the principles governing shock tube equations, reflected shocks, shock tube boundary layer and the measurement of shock speed.
<b>CO743.4</b>	Identify different conventional and state of the art instruments for measuring pressure, temperature and velocity
<b>CO743.5</b>	Infer the flow pattern effectively using various flow visualization techniques

### **Textbooks:**

2. Lecture course on Advanced Flow diagnostic techniques 17-19 September 2008 NAL, Bangalore.
3. Doebelin. "Measurement Systems: Application & Design"

### Scheme of Examination:

#### Semester End Examination (SEE):

SEE Question paper is to be set for 100 marks and the marks scored will be proportionately reduced to 50. There will be two full questions (with a maximum of four sub questions) from each module carrying 20 marks each. Students are required to answer any **five full questions** choosing at least **one full question from each module**.

#### Continuous Internal Evaluation (CIE):

Three Tests are to be conducted for 40 marks each. CIE is executed by way of quizzes / Alternate Assessment Tools (AATs) for 10 marks

**Table 1: Distribution of weightage for CIE & SEE of Regular courses**

	Component	Marks	Total Marks
CIE	IE Test-1	40	50
	IE Test-2		
	IE Test-3		
	Quizzes / Assignment	10	
SEE	Semester End Examination	50	50
<b>Grand Total</b>			<b>100</b>

**SEMESTER – VII**  
**PROGRAM ELECTIVE-3**

**COURSE: HELICOPTER ENGINEERING**

<b>Course Code</b>	<b>22ANE744</b>	<b>CIE Marks</b>	<b>50</b>
<b>Hours/Week (L: T: P)</b>	<b>2:2:0</b>	<b>SEE Marks</b>	<b>50</b>
<b>No. of Credits</b>	<b>3</b>	<b>Examination Hours</b>	<b>03</b>

**Pre-requisite:** Basics of Aeronautical Engineering

**Course Objectives:**

To make the student familiarize with the principles involved in helicopters and to study the performance and stability aspects of Helicopter under different operating conditions.

<b>CLO1</b>	Understand how helicopters work and their historical development
<b>CLO2</b>	Apply the concept of momentum theory and Blade element theory to analyze helicopter aerodynamics
<b>CLO3</b>	Understand the basics of blade element theory and its application in designing the blade profiles
<b>CLO4</b>	Evaluate the helicopters performance.
<b>CLO5</b>	Explore the dynamics and vibration aspects of helicopters

<b>Content</b>	<b>No. of Hours/ RBT levels</b>
<p><b>Module 1: Brief overview and basics of Helicopter</b> Historical development of rotorcraft, comparison of helicopter with fixed wing aircraft, features, roles, parts of helicopter, propulsion &amp; power transmission, basic controls, reaction torque, anti-torque mechanisms, Autorotation concept, different helicopter configurations. Helicopter complexities – Rotor wake, Dissymmetry of Lift in forward flight, Control mechanism, ground resonance, stability &amp; control issues.</p>	<b>08 Hours / L2</b>
<p><b>Module 2: Momentum theory in hover and axial flight</b> Modeling rotor as an actuator disc, momentum theory, concept of induced velocity, development of simplified models for induced velocity, induced power, and figure of merit, momentum theory in vertical climb, flow states in climb, descent and vortex ring state.</p>	<b>08 Hours / L2</b>
<p><b>Module 3: Blade element theory in hover and vertical climb</b> Combined momentum and blade element theory, Ideal twist and taper distribution, rotor solidity, general equation for induced velocity, thrust &amp; torque equations, tip losses, ground effect and autorotation in vertical descent.</p>	<b>08 Hours / L2</b>

<p><b>Module 4: Helicopter in forward flight &amp; performance Analysis</b>  Momentum theory, induced velocity &amp; induced power variation with forward speed. Blade motion in forward flight, reverse flow region, blade element theory, expression for thrust, torque and H-force.  Hover performance, Hover in ground Effect, Hover out of ground effect, hover ceiling, forward flight performance and power required</p>	<b>08 Hours/ L2</b>
<p><b>Module 5: Rotor Dynamics &amp; Vibration</b>  Dissymmetry of Lift, flapping Hinge, flapping motion in hover: flapping equilibrium, coning – Causes &amp; Effects, static &amp; dynamic stability of flapping motion in hover. Rotor as Gyroscope – Gyroscopic Effect on Rotor response, Rotor Pitch Control: Collective &amp; Cyclic. Rotor dynamics with Flap- Hinge Offset and Flapping Dynamics, Brief introduction to helicopter vibration.</p>	<b>10 Hours/ L3</b>

**COURSE OUTCOMES:**

**Upon completion of this course, student will be able to:**

<b>CO744.1</b>	Explain the Parts of Helicopters and their functionality
<b>CO744.2</b>	Apply the Momentum theory for Analysis of Helicopter Aerodynamics
<b>CO744.3</b>	Apply the Blade Element theory for Analysis of Helicopter Aerodynamics
<b>CO744.4</b>	Calculate the performance parameters in various flight Conditions
<b>CO744.5</b>	Understand the complexity of rotor dynamics and helicopter vibrations

**SEMESTER – VII**  
**OPEN ELECTIVE 2**

**COURSE: DRONE TECHNOLOGY**

<b>Course Code</b>	<b>22ANE751</b>	<b>CIE Marks</b>	<b>50</b>
<b>Hours/Week (L: T: P)</b>	<b>3:0:0</b>	<b>SEE Marks</b>	<b>50</b>
<b>No. of Credits</b>	<b>3</b>	<b>Examination Hours</b>	<b>03</b>

**Course Objectives:** To enable students to understand the drone and its functioning.

<b>CLO1</b>	To Identify & select different types of drones, drone rules and regulations
<b>CLO2</b>	Understand aerodynamics, BLDC motors and different type of batteries
<b>CLO3</b>	Understand different sensors and Flight Control System
<b>CLO4</b>	To understand the mission plans and its control systems

<b>Content</b>	<b>No. of Hours/ RBT levels</b>
<p><b>Module 1: Introduction to drones</b> Different types of Drones, Nomenclatures, History of aerial drones, reputation, airframe, Configurations, basic components, current/future uses of drones. DGCA regulations</p>	<b>10 Hours L1, L2</b>
<p><b>Module 2: Air vehicle and Propulsion system</b> Basics of aerodynamics, Introduction to different electric motors like DC, BLDC, servo motors, working, understanding its functioning, speed torque characteristics, degree of freedom in drone. Introduction Electronic Speed Controller. Performing payload calculation, speed control techniques, thrust to weight ratio.</p>	<b>10 Hours L1, L2</b>
<p><b>Module 3: Battery System for drones</b> Introduction of different types of batteries used in drone. Understand different specifications and their significance of batteries. Different charging circuits or batteries, battery management system (BMS) and Building Blocks of BMS.</p>	<b>10 Hours L1, L2</b>
<p><b>Module 4: Sensors for drones</b> Introduction of different sensors used in drone like accelerometers, inertial measurement units, tilt and lidar sensor, gyro sensor. Principle of operation, their roles and characteristics. Selection of appropriate sensor as per requirement. Introduction to Flight controller system</p>	<b>10 Hours L1, L2</b>

<b>Module 5: Mission Planning and Control</b> Air Vehicle and Payload Control, Reconnaissance/Surveillance Payloads, Weapon Payloads, Other Payloads, Data-Link Functions and Attributes, Data-Link Margin, Data-Rate Reduction, Launch Systems, Recovery Systems, Launch and Recovery Tradeoffs	<b>10 Hours</b> <b>L1, L2</b>
---	----------------------------------

**COURSE OUTCOMES:**

**Upon completion of this course, student will be able to:**

<b>CO751.1</b>	Identify different types of drones and drone rules and regulations
<b>CO751.2</b>	Explain the Drone Aerodynamics and propulsion system
<b>CO751.3</b>	Illustrate the different battery systems
<b>CO751.4</b>	Identify different sensors and Flight Control System
<b>CO751.5</b>	Encompass how mission planning and control is carried out with proper payloads (L2)

**COURSE: AIR TRAFFIC CONTROL**

<b>Course Code</b>	<b>22ANE752</b>	<b>CIE Marks</b>	<b>50</b>
<b>Hours/Week (L: T: P)</b>	<b>3:0:0</b>	<b>SEE Marks</b>	<b>50</b>
<b>No. of Credits</b>	<b>3</b>	<b>Examination Hours</b>	<b>03</b>

**Course Objectives:** To enable students to understand the Air traffic controls and its functioning.

<b>CLO1</b>	To trace the historical evolution of air traffic control, define the roles and responsibilities of air traffic controllers
<b>CLO2</b>	To educate about the different types of airspace (Class A, B, C, D, E, and G), explore air traffic flow management, familiarize them with ATC procedures
<b>CLO3</b>	To study radiotelephony communication procedures, introduce the ICAO phonetic alphabet and phraseology
<b>CLO4</b>	To familiarize with navigation aids and equipment (e.g., VOR, GPS, ILS), introduce radar systems and surveillance techniques
<b>CLO5</b>	To understand safety management systems in air traffic control, emphasize collision avoidance and traffic separation strategies

<b>Content</b>	<b>No. of Hours/ RBT levels</b>
<b>Module 1: Introduction to Air Traffic Control</b> Overview of the aviation industry, Historical development of air traffic control, Role and responsibilities of air traffic controllers, ATC facilities and their functions.	<b>10 Hours</b> <b>L1, L2</b>
<b>Module 2: Airspace and Air Traffic Management</b> Types of airspace (Class A, B, C, D, E, and G)., Air traffic flow management, Air traffic control procedures and coordination, Airspace regulations and restrictions.	<b>10 Hours</b> <b>L1, L2</b>
<b>Module 3: Air Traffic Communication</b> Radiotelephony communication procedures, ICAO phonetic alphabet and phraseology, Use of ATC communication equipment, Emergency communication procedures	<b>10 Hours</b> <b>L1, L2</b>
<b>Module 4: Navigation and Surveillance</b> Navigation aids and equipment (e.g., VOR, GPS, ILS), Radar systems and surveillance techniques, Navigation charts and flight planning, Aircraft tracking and position reporting	<b>10 Hours</b> <b>L1, L2</b>
<b>Module 5: Safety and Emergency Procedures</b> Safety management systems in ATC, Collision avoidance and traffic separation.	<b>10 Hours</b> <b>L1, L2</b>

Emergency procedures for aircraft and ATC, Human factors in air traffic control	
---	--

### **COURSE OUTCOMES:**

**Upon completion of this course, student will be able to:**

<b>CO752.1</b>	Understand the aviation industry's foundations, appreciate the historical context of air traffic control, describe the duties of air traffic controllers
<b>CO752.2</b>	Categorize various airspace classes, explain air traffic flow management concepts, understand ATC coordination procedures, and interpret airspace regulations.
<b>CO752.3</b>	Skillful in radiotelephony communication, effectively utilize the ICAO phonetic alphabet and phraseology, operate ATC communication equipment
<b>CO752.4</b>	Utilize various navigation aids, understand radar systems, surveillance methods, and plan flights using navigation charts
<b>CO752.5</b>	Familiar in safety management systems, capable of implementing collision avoidance and traffic separation measures, proficient in handling emergency situations

### **Textbooks:**

**COURSE: INNOVATIONS IN SPACE TECHNOLOGIES**

<b>Course Code</b>	<b>22ANE753</b>	<b>CIE Marks</b>	<b>50</b>
<b>Hours/Week (L: T: P)</b>	<b>3:0:0</b>	<b>SEE Marks</b>	<b>50</b>
<b>No. of Credits</b>	<b>3</b>	<b>Examination Hours</b>	<b>03</b>

**Course Objectives:** To enable students to understand the innovations in space technologies

<b>CLO1</b>	To provide an understanding of space missions, including types and space environment considerations, and to introduce the fundamentals of rocket propulsion
<b>CLO2</b>	To introduce different re-entry techniques, including steep ballistic, orbital, skip, and "double-dip" re-entries, as well as aero-braking and lifting body re-entries
<b>CLO3</b>	To provide a foundation in orbital mechanics, covering two-body motion, orbital elements, ground trace, in-plane orbit changes, transfer manoeuvres
<b>CLO4</b>	To explain the dynamics of satellite attitude control, including torque-free axisymmetric rigid body motion, attitude control for spinning and non-spinning spacecraft
<b>CLO5</b>	To introduce the architecture of supporting ground systems and team interfaces for space missions

<b>Content</b>	<b>No. of Hours/ RBT levels</b>
<b>Module 1: Fundamentals of Rocket Propulsion and Trajectories</b> Space Mission- Types-Space environment-launch vehicle selection.; Introduction to rocket propulsion -fundamentals of solid propellant rockets- Fundamentals of liquid propellant rockets -Rocket equation, Two-dimensional trajectories of rockets and missiles -Multistage Rockets -Single stage to orbit- Sounding Rocket -Aerospace plane Gravity turn trajectories-Impact point calculation-Injection conditions-Flight dispersions	<b>10 Hours/L2</b>
<b>Module 2: Atmospheric Re-entry</b> Introduction-Steep ballistic re-entry-Ballistic orbital re-entry-Skip re-entry- "Double-Dip" re-entry - Aero-braking - Lifting body re-entry	<b>10 Hours/L2</b>
<b>Module 3: Fundamentals of Orbital Mechanics, Orbital Maneuver's:</b> Two-body motion-circular, elliptic, hyperbolic, and parabolic orbits-Basic orbital elements-Ground trace. In-Plane orbit changes-Hohmann Transfer-Bi-elliptical transfer-Plane changes- Combined maneuver's Propulsion for maneuvers	<b>10 Hours/L2</b>
<b>Module 4: Satellite Attitude Dynamics</b> Torque free axisymmetric rigid body-Attitude control for spinning spacecraft - Attitude control for non-spinning spacecraft - The Yo-Yo mechanism – Gravity – Gradient Satellite-Dual spin spacecraft-Attitude determination	<b>10 Hours/L2</b>

<b>Module 5: Space mission Operations</b> Supporting ground system architecture and team interfaces - Mission phases and core operations- Team responsibilities – Mission diversity – Standard operations practices	<b>10 Hours/L2</b>
--	------------------------

**COURSE OUTCOMES:**

**Upon completion of this course, student will be able to:**

<b>CO753.1</b>	Comprehend various types of space missions, make informed decisions regarding launch vehicle selection, understand the basics of rocket propulsion
<b>CO753.2</b>	Explain the principles and methods of various atmospheric re-entry techniques, and understand their applications in space missions
<b>CO753.3</b>	Have a strong grasp of orbital mechanics, be capable of calculating and planning various orbital maneuvers
<b>CO753.4</b>	Analyze and control the attitude of satellites in different scenarios, understand the dynamics of various satellite configurations
<b>CO753.5</b>	Proficient in understanding the ground systems and team structures necessary for space missions, recognize the roles and responsibilities of team members

**Open Elective**

**COURSE: URBAN AIR MOBILITY**

Course Code	22ANE754	CIE Marks	50
Hours/Week (L: T: P)	1:0:0	SEE Marks	50
No. of Credits	1	Examination Hours	03

**Course Objectives:** To enable students to apply the knowledge of Urban air mobility in broad domain of aeronautical engineering by making them to learn:

<b>CLO1</b>	Understand UAM and its ecosystem in India
<b>CLO2</b>	Acquire knowledge on the classification and operations of UAM
<b>CLO3</b>	comprehend the ecosystem and infrastructure developments for UAM
<b>CLO4</b>	appreciate the UAM and DRONE rules and regulation
<b>CLO5</b>	Describe the type certification for UAM

Content	No. of h r / RBT levels
<b>Module 1: INTRODUCTION TO UAM</b> UAM, the evolving landscape of urban air mobility in india, UAM around the globe and its progress, enabling ecosystem for UAM in India, policy support.	<b>03 Hours / L3</b>
<b>Module 2: The Unmanned Aircraft System Rules, 2021</b> Category - The unmanned aircraft are classified based on the maximum all up weight including its pay load, DGCA Guidelines for UAS, Operations of UAS, Drone Port	<b>03 Hours/ L2</b>
<b>Module 3: VEHICLE TYPES</b> Main Use Cases and Infrastructure, UDAN-RCS Scheme of Government of India	<b>03 Hours/ L3</b>
<b>Module 4: UNMANNED AIRCRAFT SYSTEM(UAS)</b> Drone Rules 2021, Amendment Rules 2022	<b>03 Hours/ L3</b>
<b>Module 5: Digital sky platform</b> Type certificate, RPCS details, list of RPTOS, UIN details	<b>03 Hours/ L3</b>

**COURSE OUTCOMES:**

**Upon completion of this course, student will be able to:**

<b>CO754.1</b>	Understand UAM and its ecosystem in India
<b>CO754.2</b>	Acquire knowledge on the classification and operations of UAM
<b>CO754.3</b>	comprehend the ecosystem and infrastructure developments for UAM
<b>CO754.4</b>	appreciate the UAM and DRONE rules and regulation
<b>CO754.5</b>	Describe the type certification for UAM

**Textbooks:**

2. Valavanis, K., Vachtsevanos, George J, “Unmanned Aerial Vehicles”, Springer, 2015.

**Scheme of Examination:****Semester End Examination (SEE):**

SEE Question paper is to be set for 100 marks and the marks scored will be proportionately reduced to 50. There will be two full questions (with a maximum of four sub questions) from each module carrying 20 marks each. Students are required to answer any **five full questions** choosing at least **one full question from each module**.

**Continuous Internal Evaluation (CIE):**

Three Tests are to be conducted for 40 marks each. CIE is executed by way of quizzes/Alternate Assessment Tools (AATs) for 10 marks.

Typical Evaluation pattern for regular courses is shown in Table 1.

**Table 1: Distribution of weightage for CIE & SEE of Regular courses**

	Component	Marks	Total Marks	
CIE	CIE Test-1	40	50	
	CIE Test-2			
	CIE Test-3			
	Quiz 1/AAT	10		
SEE	Semester Examination	End	50	50
<b>Grand Total</b>			<b>100</b>

## SEMESTER – VII

### COURSE: PROJECT PHASE 1

Course Code	22ANEP76	CIE Marks	50
Hours/Week (L: T: P)	0:0:4	SEE Marks	-
No. of Credits	2	Examination Hours	-

Content	No. of Hours/RBT levels
<p><b>Project work phase - 1:</b> Based on the ability/abilities of the student/s and recommendations of the mentor, a single discipline or a multidisciplinary project can be assigned to an individual student or to a group having not more than 4 students. In extraordinary cases, like the funded projects requiring students from different disciplines, the project student strength can be 5 or 6.</p> <p>CIE procedure for Project Work Phase - 1:</p> <p><b>a. Single discipline:</b> The CIE marks shall be awarded by a committee consisting of the Head of the concerned Department and two senior faculty members of the Department, one of whom shall be the Guide.</p> <p>The CIE marks awarded for the project work phase -1, shall be based on the evaluation of the project work phase -1 Report (covering Literature Survey, Problem identification, Objectives and Methodology) using Rubrics, project presentation skill and question and answer session in the ratio 50:25:25. The marks awarded for the Project report shall be the same for all the batch mates.</p> <p><b>b. Interdisciplinary:</b> Continuous Internal Evaluation shall be group wise at the college level with the participation of all guides of the college. Participation of external guide/s, if any, is desirable.</p> <p>The CIE marks awarded for the project work phase -1, shall be based on the evaluation of project work phase -1 Report (covering Literature Survey, Problem identification, Objectives and Methodology), project presentation skill and question and answer session in the ratio 50:25:25. The marks awarded for the project report shall be the same for all the batch mates as per Rubrics covering all Program Outcomes.</p>	<p><b>04 Hours</b></p>

Individual student performance are evaluated based on the following COs :

<b>CO76.1</b>	Able to make comprehensive use of the technical knowledge gained from previous courses
<b>CO76.2</b>	Able to understand technologies concerned with the project
<b>CO76.3</b>	Able to apply project management skills (scheduling work, procuring parts and documenting expenditures and working within the confines of a deadline).
<b>CO76.4</b>	Able to analyze, develop and demonstrate the proposed work
<b>CO76.5</b>	Able to communicate technical information by means of ethical writing and presentation.

## SEMESTER – VII

### COURSE: AVIONICS LAB

Course Code	22ANEL77	CIE Marks	50
Hours/Week (L: T: P)	0:0:2	SEE Marks	50
No. of Credits	1	Examination Hours	03

#### Course Learning Objectives:

CLO1	understand data acquisition from various sensors
CLO2	Study the concepts of actuation and alerting system.
CLO3	Perform the analog and digital system communication
CLO4	Working of wireless protocol and data transfer
CLO5	Principles of data transfer in MIL STD 1553B and AFDX data bus

S.N	LIST OF EXPERIMENTS	RBT LEVELS
1	Determination of velocity and range of the target using RADAR	L3
2	Estimation of RPM and time period of oscillation using RADAR	L3
3	Display the orientation of the control surface and change the orientation of the control surface to stabilize the aircraft.	L3
4	Sense the temperature and pressure of cabin and provide alarm during emergency	L3
5	Configuration and data transfer using MIL STD 1553	L3
6	Configuration and data transfer using ARINC 429	L3
7	Configuration and data transfer using AFDX	L3
8	Perform onboard communication using satellite communication	L3
9	Determination of aircraft attitude using inertial navigation system	L3
10	Demonstrate the application of GPS system	L3
11	Estimation of distance or altitude measurement of the aircraft	L3

#### COURSE OUTCOMES:

Upon completion of this course, student will be able to:

CO77.1	Carry out data acquisition from various sensors on board
CO77.2	Perform the operation of actuation and alerting system.
CO77.3	Execute data communication between analog and digital system
CO77.4	Experiment how wireless protocol and interrupts used in data transfer
CO77.5	Understand the data transfer on MIL STD 1553B and AFDX data bus

**Scheme of Examination:**

## SEMESTER VIII

### COURSE: AIRCRAFT DESIGN

Course Code	22ANE81	CIE Marks	50
Hours/Week (L: T: P)	4:0:0	SEE Marks	50
No. of Credits	4	Examination Hours	03

**Pre-requisite:** Low speed and high speed Aerodynamics, Aircraft Structures, Propulsion

**Course Learning Objectives:** To enable students to apply the knowledge of Flight Vehicle Design in broad domain of Aeronautical Engineering by making them to learn:

<b>CLO1</b>	Conceptual design process of an aircraft, airfoil and wing geometry.
<b>CLO2</b>	Analyzing of design geometry, thrust to weight ratio and wing loading of an aircraft.
<b>CLO3</b>	Overview of Initial sizing and configuration layout.
<b>CLO4</b>	Outline of aerodynamics, propulsion w.r.t design.
<b>CLO5</b>	Design aspects of sub systems in flight vehicles.

Content	No. of Hours/RBT levels
<p><b>Module 1: OVERVIEW OF DESIGN PROCESS</b> Introduction, Typical requirements for a civil transport and a military fighter aircraft, Phases of design, Aircraft conceptual design process, Take-off weight build up, Empty weight estimation, Fuel fraction estimation, Take-off weight calculation, Trade studies. Airfoil geometry, Airfoil lift and drag, Airfoil families, Airfoil design, Airfoil lift coefficient, Airfoil thickness, Camber, Stall, Reynolds number effects.</p>	<b>10 Hours/ L3</b>
<p><b>Module 2: GEOMETRY AND WEIGHT ESTIMATION</b> Wing geometry, Aspect ratio, Sweep, Taper ratio, Twist, Incidence, Dihedral, Wing vertical location of wings, Wing tips, Biplane wings, Tail geometry and arrangement. Thrust to weight definitions, Power loading, Statistical estimate of T/W. Wing Loading for Cruise, Loiter, Endurance, Instantaneous Turn rate, Sustained Turn rate, Climb, &amp; Glide, Maximum ceiling, Selection of Thrust to Weight Ratio &amp; Wing Loading</p>	<b>08 Hours/ L3</b>
<p><b>Module 3: INITIAL SIZING AND CONFIGURATION</b> Rubber engine sizing, Fixed engine sizing, Geometry sizing – Fuselage, Wing, Tail volume coefficient, and Control surface sizing. Conic lofting, Conic fuselage development, Conic shape parameter, Wing-tail layout &amp; Loft. Wetted area determination. Special considerations in configuration layout: Aerodynamic, Structural, Detectability. Crew station, Passenger, and Payload arrangements.</p>	<b>08 Hours/ L3</b>
<p><b>Module 4: AERODYNAMICS &amp; PROPULSION</b> A brief overview of aerodynamic coefficients and forces, Types of propulsion systems, Jet engine thrust considerations, Thrust-drag book keeping, installed thrust methodology, Piston engine performance – propeller performance and piston-prop thrust correction, Turboprop performance.</p>	<b>08 Hours/ L3</b>

*Bing*

<b>Module 5: DESIGN ASPECTS OF SUBSYSTEMS</b> Flight Control system, Landing Gear and subsystem, Propulsion and Fuel System Integration, Air Pressurization and Air Conditioning System, Electrical & Avionic Systems, Safety constraints, Material selection criteria.	<b>08 Hours/ L3</b>
--	-------------------------

**COURSE OUTCOMES:**

**Upon completion of this course, student will be able to:**

<b>CO81.1</b>	Comprehend aircraft design fundamentals, including introduction, requirements, phases conceptual design, weight calculations, trade studies, and airfoil principles.
<b>CO81.2</b>	Estimate the design geometry, thrust to weight ratio and wing loading of an aircraft.
<b>CO81.3</b>	Discuss initial sizing and configuration layout.
<b>CO81.4</b>	Acquire a thorough understanding of aerodynamic coefficients, propulsion systems, jet engine thrust, thrust-drag analysis, and piston and turboprop engine performance.
<b>CO81.5</b>	Discuss the design aspects of sub systems in flight vehicles.

**Textbooks:**

**SEMESTER – VIII**  
**PROGRAM ELECTIVE 4**

**COURSE: SATELLITE TECHNOLOGY**

<b>Course Code</b>	<b>22ANE821</b>	<b>CIE Marks</b>	<b>50</b>
<b>Hours/Week (L: T: P)</b>	<b>3:0:0</b>	<b>SEE Marks</b>	<b>50</b>
<b>No. of Credits</b>	<b>3</b>	<b>Examination Hours</b>	<b>03</b>

**Pre-requisite:** NIL

**Course Learning Objectives:** To enable students to apply the knowledge Satellite Technology in broad domain of Aeronautical Engineering by making them to learn:

<b>CLO1</b>	To introduce basic aspects of satellite subsystems and their functions peculiarities of space environment and types of satellite orbits to students.
<b>CLO2</b>	To impart knowledge to students on orbit determination and maneuvers and ground station network requirements.
<b>CLO3</b>	To make students familiarize with satellite mechanical and structural configurations and satellite thermal control systems.
<b>CLO4</b>	To acquaint students with satellite control requirements and type of control maneuvers and sensors needed for control.
<b>CLO5</b>	To impart knowledge to students on satellite power electronics telemetry and tele-command systems.

<b>Content</b>	<b>No. of Hours/RBT levels</b>
<b>Module 1: INTRODUCTION TO SATELLITE SYSTEMS</b> Common satellite applications and missions – Typical spacecraft orbits – Definitions of spin the three axis stabilization-Space environment – Launch vehicles – Satellite system and their functions (structure, thermal, mechanisms, power, propulsion, guidance and control, bus electronics)	<b>08 Hours/ L3</b>
<b>Module 2: ORBITAL MECHANICS</b> Fundamental of flight dynamics – Time and coordinate systems – Orbit determination and prediction – Orbital maneuvers – GPS systems and application for satellite/orbit determination –Ground station network requirements.	<b>08 Hours/ L3</b>
<b>Module 3: SATELLITE STRUCTURES &amp; THERMAL CONTROL</b> Satellite mechanical and structural configuration: Satellite configuration choices, launch loads, separation induced loads, deployment requirements – Design and analysis of satellite structures – Structural materials and fabrication – The need of thermal control: externally induced thermal environment – Internally induced thermal environment - Heat transfer mechanism: internal to the spacecraft and external heat load variations – Thermal control systems: active and passive methods.	<b>08 Hours/ L3</b>

<p><b>Module 4: SPACECRAFT CONTROL</b> Control requirements: attitude control and station keeping functions, type of control maneuvers –Stabilization schemes: spin stabilization, gravity gradient methods, 3 axis stabilization – Commonly used control systems: mass expulsion systems, momentum exchange systems, gyro and magnetic torque - Sensors star and sun sensors, earth sensor, magnetometers and inertial sensors.</p>	<b>08 Hours/ L3</b>
<p><b>Module 5: POWER SYSTEM AND BUS ELECTRONICS</b> Solar panels: Silicon and Ga-As cells, power generation capacity, efficiency – Space battery systems – battery types, characteristics and efficiency parameters – Power electronics. Telemetry and telecommand systems: Tm &amp; TC functions, generally employed communication bands (UHF/VHF, S, L, Ku, Ka), their characteristics and applications. Coding Systems – Onboard computer- Ground checkout Systems</p>	<b>08 Hours/ L3</b>

**COURSE OUTCOMES:**

**Upon completion of this course, student will be able to:**

<b>CO821.1</b>	Explain the concepts of Orbits and their mechanics.
<b>CO821.2</b>	Explain the concepts of structural design, analyzing techniques and various types of loads in satellite structural subsystem.
<b>CO821.3</b>	Acquire knowledge on the importance of thermal control subsystem and its design studies
<b>CO821.4</b>	Explain the concepts of satellite sensors and actuators that needed for Attitude control subsystem development.
<b>CO821.5</b>	Acquire the knowledge of satellite attitude as well as orbital dynamics in order to design the satellite control subsystem

PROGRAM ELECTIVE 4**

**COURSE: CRYOGENIC PROPULSION**

<b>Course Code</b>	<b>22ANE822</b>	<b>CIE Marks</b>	<b>50</b>
<b>Hours/Week (L: T: P)</b>	<b>3:0:0</b>	<b>SEE Marks</b>	<b>50</b>
<b>No. of Credits</b>	<b>3</b>	<b>Examination Hours</b>	<b>03</b>

**Pre-requisite:** Aero Propulsion-II

**Course Learning Objectives:** To enable students to apply the knowledge of Cryogenic Propulsion in broad domain of aeronautical engineering by making them to learn:

<b>CLO1</b>	The fundamental physics of cryogenic engineering and their fluid properties.
<b>CLO2</b>	The properties of cryogenic materials, explore various cryogenic refrigeration techniques, and study liquefaction of natural gas
<b>CLO3</b>	To introduce various cryogenic insulation methods.
<b>CLO4</b>	The design considerations for cryogenic storage vessels and instrumentation
<b>CLO5</b>	To explore various cryogenic equipments.

<b>Content</b>	<b>No.of Hours/ RBT levels</b>
<b>Module 1: INTRODUCTION TO CRYOGENIC ENGINEERING</b> Thermo physical and fluid dynamic properties of liquid and gas hydrogen, Thermo physical and fluid dynamic properties of liquid and gas helium, Liquefaction systems of hydrogen and helium gases, Liquefaction systems of hydrogen and helium gases, Refrigeration and liquefaction principals; Joule Thomson effect and inversion curve; Adiabatic and isenthalpic expansion with their comparison	<b>08 Hours/ L3</b>
<b>Module 2: PROPERTIES OF CRYOGENIC MATERIALS</b> Cryogenic fluids, Solids at cryogenic temperatures; Superconductivity, Recuperative - Linde - Hampson, Claude, Cascade, Heylandt, Kapitza, Collins, Simon; Regenerative - Stirling cycle and refrigerator, Slovac refrigerator, Gifford-McMahon refrigerator, Vuilleumier refrigerator, Pulse Tube refrigerator; Liquefaction of natural gas	<b>10 Hours/ L3</b>
<b>Module 3: CRYOGENIC INSULATION</b> Vacuum insulation, evacuated porous insulation, gas filled Powders and fibrous materials, Solid foams, Multilayer insulation, Liquid and vapour Shields, Composite insulations	<b>08 Hours/ L3</b>
<b>Module 4: STORAGE AND INSTRUMENTATION OF CRYOGENIC LIQUIDS</b> Design considerations of storage vessel; Dewar vessels; Industrial storage vessels; Storage of cryogenic fluids in space; Transfer systems and Lines for cryogenic liquids; Cryogenic valves in transfer lines; Two phase flow in Transfer	<b>08 Hours/ L4</b>

system; Cool-down of storage and transfer systems, Measurement of strain, pressure, flow, liquid level and Temperature in cryogenic environment; Cryostats	
<b>Module 5: CRYOGENIC EQUIPMENT</b> Cryogenic heat exchangers - recuperative and regenerative; Variables affecting heat exchanger and system performance; Cryogenic compressors, Pumps, expanders; Turbo alternators; Effect of component inefficiencies; System Optimization, Magneto-caloric refrigerator; 3He-4He Dilution refrigerator; Cryo-pumping; Cryogenic Engineering applications in energy, aeronautics, space industry, biology, preservation Application of Cryogenic Engineering in Transport	<b>08 Hours/ L3</b>

**COURSE OUTCOMES:**

**Upon completion of this course, student will be able to:**

<b>CO822.1</b>	Illustrate the fundamental physics of cryogenic engineering and their fluid properties.
<b>CO822.2</b>	Interpret the properties of materials at cryogenic temperatures and refrigeration techniques.
<b>CO822.3</b>	Determine appropriate insulation techniques for cryogenic applications.
<b>CO822.4</b>	Categorize cryogenic storage systems, transfer systems, and instrumentation for measuring key parameters in cryogenic environments.
<b>CO822.5</b>	Apply cryogenic engineering principles to real-world applications

<b>Course Code</b>	<b>22ANE823</b>	<b>CIE Marks</b>	<b>50</b>
<b>Hours/Week (L: T: P)</b>	<b>3:0:0</b>	<b>SEE Marks</b>	<b>50</b>
<b>No. of Credits</b>	<b>3</b>	<b>Examination Hours</b>	<b>03</b>

**Pre requisite:** Drone Technology

**Course Learning Objectives:** To enable students to apply the knowledge of Drones and Intelligent Systems in broad domain of Aeronautical Engineering by making them to learn:

<b>CLO1</b>	To Gain the Knowledge of UAS and Artificial intelligence systems
<b>CLO2</b>	To Inculcate the Knowledge of UAS in various applications
<b>CLO3</b>	To insight the communications of UAS
<b>CLO4</b>	To comprehend the DRONE usage in image processing applications
<b>CLO5</b>	To impart the Practice the UAV maintenance and operations regulations

<b>Content</b>	<b>No. of Hours/RBT levels</b>
<b>Module 1: UNMANNED AERIAL SYSTEMS</b> Drone Basics, Unmanned Aerial Systems (UAS), Drone Sensors, Micro Controllers, Internet of Things (IOT) Systems, IOT Controls, Different Types of UAV and its Applications, Recent Trends in Artificial Intelligence Systems	<b>08 Hours/ L3</b>
<b>Module 2: UAV SENSORS</b> UAV Sensor Systems, Different Sensor Modules, Monitoring Systems – Pollution, Air Quality, Weather, Medical, Traffic, Surveillance, Tracking, Agriculture, Space. Sensor Integrations, Sensor Programming.	<b>08 Hours/ L3</b>
<b>Module 3: UAV COMMUNICATION SYSTEMS</b> Autonomous - Waypoints Navigations, Ground Control Station (GCS), UAV Telemetry Systems - Various Flight Controllers, Radar Communication Systems, UAV Stealth Technology, Radar Absorbing Material, Drone Jamming Technology.	<b>08 Hours/ L3</b>
<b>Module 4: IMAGE PROCESSING</b> Drone Intelligent Modes, Drone Smart Modes, FPV & Image Processing System Image Processing, Multispectral Camera, Lidar, GIS Mapping.	<b>08 Hours/ L3</b>
<b>Module 5: UAV MAINTENANCE</b> Vehicle Test Controller Duties, UAV Checklist – Pre Flight Checklist, Post Flight Checklist, UAV Maintenance Process, UAV Overhauling, RC Simulators and Controls, DGCA-Drone Regulations, DGCA Drone Pilot Rule.	<b>08 Hours/ L3</b>

**COURSE OUTCOMES:**

**Upon completion of this course, student will be able to:**

<b>CO823.1</b>	Understand the UAS and Artificial intelligence systems
<b>CO823.2</b>	Comprehend the UAS in various applications
<b>CO823.3</b>	Describe communications of UAS
<b>CO823.4</b>	Summarize the DRONE usage in image processing applications
<b>CO823.5</b>	Practice the UAV maintenance and operations regulations

**Textbooks:**

1. Unmanned Aircraft Systems: UAVS Design, Development and Deployment, Reg Austin 2010 John Wiley & Sons, Ltd
2. Design of Unmanned Aerial Systems, Dr. Mohammad H. Sadraey, 2020 John Wiley & Sons Ltd.

**Reference books:**

1. Introduction to UAV Systems, Jean-Marc Moschetta and Kamesh Namuduri
2. UAV Networks and Communications, Edited by Kamesh Namuduri, University of North Texas, Serge Chaumette, Université de Bordeaux, Jae H. Kim, Boeing Research and Technology, James P. G. Sterbenz, University of Kansas Cambridge University Press, November 2017

**Scheme of Examination:**

**Semester End Examination (SEE):**

**SEE Question paper is to be set for 100 marks and the marks scored will be proportionately reduced to 50.** There will be two full questions (with a maximum of four sub questions) from each module carrying 20 marks each. Students are required to answer any **five full questions** choosing at least **one full question from each module** Continuous Internal Evaluation (CIE):

Three Tests are to be conducted for **40 marks each**. CIE is executed by way of quizzes / Alternate Assessment Tools (AATs) for 10 marks.

Typical Evaluation pattern for regular courses is shown in Table 1. **Table 1: Distribution of weightage for CIE& SEE of Regular courses**

	Component	Marks	Total Marks
CIE	CIE Test-1	40	50
	CIE Test-2		
	CIE Test-3		
	Quiz 1/AAT	10	
SEE	Semester End Examination	50	50
<b>Grand Total</b>			<b>100</b>

**SEMESTER – VIII  
PROGRAM ELECTIVE-4**

**COURSE: GUIDANCE AND CONTROL**

<b>Course Code</b>	<b>22ANE824</b>	<b>CIE Marks</b>	<b>50</b>
<b>Hours/Week (L: T: P)</b>	<b>3:0:0</b>	<b>SEE Marks</b>	<b>50</b>
<b>No. of Credits</b>	<b>3</b>	<b>Examination Hours</b>	<b>03</b>

**Pre-requisite:** Control engineering

**Course Learning Objectives:** To enable students to apply the knowledge of guidance & control in broad domain of Aeronautical Engineering by making them to learn:

<b>CLO1</b>	Comprehend the basic concepts of navigation, guidance and control.
<b>CLO2</b>	Acquire the knowledge of radar systems and other guidance systems
<b>CLO3</b>	Understand the missile guidance and
<b>CLO4</b>	summarize missile control system.
<b>CLO5</b>	Describe the flight control and fire control of the system

<b>Content</b>	<b>No. of Hours/RBT levels</b>
<p><b>Module 1: Introduction to Guidance and Controls</b>            Concepts of navigation, guidance, and control. Introduction to basic principles. Air data information.            Principle of working of radar. MTI and Pulse Doppler radar. Moving target detector. Limitation of MTI performance. MTI from a moving platform (AMTI)</p>	<b>8 Hours/ L3</b>
<p><b>Module 2: Tracking with Radar and Guidance Systems</b>            Mono pulse tracking. Conical scan and sequential lobbing. Automatic tracking with surveillance radar (ADT).            Gyros and stabilized platforms. Inertial guidance and Laser based guidance. Components of Inertial Navigation System. Imaging Infrared guidance. Satellite navigation. GPS</p>	<b>08 Hours/ L3</b>
<p><b>Module 3: Transfer Functions and Missile Control System</b>            Input-output Transfer function. Basic altitude reference. Concepts of Open loop and Close Loop.            Guided missile concept. Roll stabilization. Control of aerodynamic missiles. Missile parameters for dynamic analysis. Missile autopilot schematics. Acceleration command and root locus</p>	<b>08 Hours/ L3</b>
<p><b>Module 4: Missile Guidance</b>            Proportional navigation guidance; command guidance. Comparison of guidance system performance. Bank to turn missile guidance</p>	<b>08 Hours/ L3</b>
<p><b>Module 5: Integrated Flight/Fire Control System</b>            Director fire control system. Tracking control laws. Longitudinal flight control system. Lateral flight control system. Rate of change of Euler angle, Auto Pilot.</p>	<b>08 Hours/ L3</b>

## COURSE OUTCOMES:

Upon completion of this course, student will be able to:

CO824.1	Comprehend the basic concepts of navigation, guidance and control.
CO824.2	Acquire the knowledge of radar systems and other guidance systems
CO824.3	Understand the missile guidance and
CO824.4	summarize missile control system.
CO824.5	Describe the flight control and fire control of the system

### Textbooks:

1. Fundamentals of Aerospace Navigation and Guidance P.T. Kabamba and A.R. Girard Cambridge Aerospace Series 2014
2. Automatic control of Aircraft & Missiles, John H Blakelock Wiley –Inter Science Publication 2<sup>nd</sup> edition.

### Reference books:

1. Navigation, R.B. Underdown & Tony Palmer Black Well Publishing 2001
2. Introduction to Radar Systems Merrill I. Skolnik Tata Mc Graw Hill 3<sup>rd</sup> edition, 2001
3. Missile Guidance and Control Systems George M. Siouris Springer 2004 Editor

### Scheme of Examination:

#### **Semester End Examination (SEE):**

**SEE Question paper is to be set for 100 marks and the marks scored will be**

**proportionately reduced to 50.** There will be two full questions (with a maximum of four sub questions) from each module carrying 20 marks each. Students are required to answer any **five full questions** choosing at least **one full question from each module** Continuous Internal

#### Evaluation (CIE):

Three Tests are to be conducted for **40 marks each**. CIE is executed by way of quizzes / Alternate Assessment Tools (AATs) for 10 marks.

Typical Evaluation pattern for regular courses is shown in Table 1.

Table 1: Distribution of weightage for CIE & SEE of Regular courses

	Component	Marks	Total Marks
CIE	CIE Test-1	<b>40</b>	<b>50</b>

**SEMESTER – VIII  
PROGRAM ELECTIVE-5**

**COURSE: CIVIL AVIATION REQUIREMENT**

<b>Course Code</b>	<b>22ANE831</b>	<b>CIE Marks</b>	<b>50</b>
<b>Hours/Week (L: T: P)</b>	<b>3:0:0</b>	<b>SEE Marks</b>	<b>50</b>
<b>No. of Credits</b>	<b>3</b>	<b>Examination Hours</b>	<b>03</b>

**Pre requisite:** NIL

**Course Learning Objectives:** To enable students to apply the knowledge of Civil aviation requirements in broad domain of Aeronautical Engineering by making them to learn:

<b>CLO1</b>	knowledge of Indian Aircraft Rules 1937 and related publication
<b>CLO2</b>	knowledge CAR series B and C (MEL, cockpit and emergency check list and Defects rectification and analysis)
<b>CLO3</b>	knowledge CAR series E for approval of organizations: in various categories and CAR series M.
<b>CLO4</b>	the knowledge CAR145, CAR -21 Type certificate and Noise certificate
<b>CLO5</b>	the knowledge C.A.R. series F airworthiness and continued airworthiness, Registration / deregistration of aircraft, Micro light and Hot air balloons, Issue/Renewal and Suspension of Special Certificate of Airworthiness

<b>Content</b>	<b>No. of Hours/RBT levels</b>
<b>Module 1: INDIAN AIRCRAFT RULES 1937 AND RELATED PUBLICATIONS</b> Knowledge of aircraft act, 1934, aircraft rules, 1937 as far as they related to airworthiness and safety of aircraft. Knowledge of civil airworthiness requirements, aeronautical information circulars, aeronautical information publications- (relating to airworthiness), advisory circulars & A.M.E. notices (NOTAMS) by DGCA	<b>08 Hours/ L3</b>
<b>Module 2: C.A.R. SERIES “B ”and “C”</b> C.A.R. series “B” Minimum Equipment List (MEL), preparation and use of cockpit check list and emergency check list. C.A.R. series ‘C’ – Defect recording, reporting, investigation, rectification and analysis	<b>08 Hours/ L3</b>
<b>Module 3: C.A.R. SERIES “E”</b> C.A.R. Series E- approval of organizations: Approval in categories E & G; CAR M- Objective, Definitions, Continuing Airworthiness Requirement.	<b>08 Hours/ L3</b>
<b>Module 4: C.A.R. SERIES CAR 145</b> General, Scope, Terms of Approval, Facility Requirement, Personnel Requirement, Certifying Staff, Safety and Quality policy, maintenance procedures and quality system. CAR -21, Type certificate, Noise certificate.	<b>08 Hours/ L3</b>
<b>Module 5: C.A.R. SERIES “F ”</b> C.A.R. SERIES “F” Airworthiness and continued airworthiness: Procedure relating to Registration / deregistration of aircraft, Issue/validation and suspension of Certificate of Airworthiness, Special Flight permits, Airworthiness requirements for Gliders , Design, Manufacture, Registration and Operation of Micro light Aircraft., Requirements for manufacture, registration and	<b>10 Hours/ L3</b>

airworthiness control of hot air balloons, Age of Aircraft to be imported for Scheduled / Non-Scheduled including Charter, General Aviation and other Operations, Issue/Renewal and Suspension of Special Certificate of Airworthiness.	
---	--

### COURSE OUTCOMES:

**Upon completion of this course, student will be able to:**

<b>CO831.1</b>	Should be able to have the knowledge of Indian Aircraft Rules 1937 and related publication
<b>CO831.2</b>	Should be able to have the knowledge CAR series B and C (MEL, cockpit and emergency check list and Defects rectification and analysis)
<b>CO831.3</b>	Should be able to have the knowledge CAR series E for approval of organizations: in various categories and CAR series M.
<b>CO831.4</b>	Should be able to have the knowledge CAR145, CAR -21 Type certificate and Noise certificate
<b>CO831.5</b>	Should be able to have the knowledge C.A.R. series F airworthiness and continued airworthiness, Registration / deregistration of aircraft, Micro light and Hot air balloons, Issue/Renewal and Suspension of Special Certificate of Airworthiness

### Textbooks:

1. Aircraft manual (India) volume – latest edition, the English book store, 17-1, Connaught circus, New Delhi.

### Reference books:

1. Civil aviation requirements with latest amendment (section 2 airworthiness) – published by DGCA, the English book store, 17-1, Connaught circus, New Delhi.

### **Scheme of Examination:**

#### **Semester End Examination (SEE):**

**SEE Question paper is to be set for 100 marks and the marks scored will be proportionately reduced to 50.** There will be two full questions (with a maximum of four sub questions) from each module carrying 20 marks each. Students are required to answer any **five full questions** choosing at least **one full question from each module.**

#### **Continuous Internal Evaluation (CIE):**

Three Tests are to be conducted for **40 marks each**. CIE is executed by way of quizzes/ Alternate Assessment Tools (AATs) for 10 marks.

Typical Evaluation pattern for regular courses is shown in Table 1. **Table1: Distribution of weightage for CIE& SEE of Regular courses**

**COURSE: NDT IN AEROSPACE ENGINEERING**

<b>Course Code</b>	<b>22ANE832</b>	<b>CIE Marks</b>	<b>50</b>
<b>Hours/Week (L: T: P)</b>	<b>3:0:0</b>	<b>SEE Marks</b>	<b>50</b>
<b>No. of Credits</b>	<b>3</b>	<b>Examination Hours</b>	<b>03</b>

**Pre requisite:** Materials and Manufacturing

**Course Objectives:** To study and understand the various Non Destructive Evaluation and Testing methods, theory and their industrial applications.

<b>CLO1</b>	To introduce the concepts of Non-Destructive Testing (NDT) and differentiate it from mechanical testing, and to provide an overview of NDT methods
<b>CLO2</b>	To explore surface NDT methods, specifically Liquid Penetrant Testing and Magnetic Particle Testing.
<b>CLO3</b>	To introduce Thermography principles, including contact and non-contact inspection methods, and Eddy Current Testing
<b>CLO4</b>	To provide an understanding of Ultrasonic Testing principles, transducers, instrumentation, and data representation
<b>CLO4</b>	To explain Radiography principles, X-Ray interactions with matter, imaging techniques, film and filmless methods, filters, geometric factors, and characteristics of films

<b>Content</b>	<b>No. of Hours/ RBT levels</b>
<p><b>Module 1: OVERVIEW OF NDT</b> NDT Versus Mechanical testing, Overview of the Non Destructive Testing Methods for the detection of manufacturing defects as well as material characterization. Relative merits and limitations, Various physical characteristics of materials and their applications in NDT. Visual inspection – Unaided and aided.</p>	<b>08 Hours/ L3</b>
<p><b>Module 2: SURFACE NON-DESTRUCTIVE EXAMINATION METHODS</b> <b>Liquid Penetrant Testing:</b> Principles, types and properties of liquid penetrants, developers, advantages and limitations of various methods, Testing Procedure, Interpretation of results. <b>Magnetic particle testing:</b> Theory of magnetism, inspection materials magnetisation methods, interpretation and evaluation of test indications, principles and methods of demagnetization, residual magnetism.</p>	<b>08 Hours/ L3</b>
<p><b>Module 3: THERMOGRAPHY AND EDDY CURRENT TESTING</b> <b>Thermography</b> Principles, contact and non-contact inspection methods, Techniques for applying liquid crystals. Advantages and limitation, infrared radiation and infrared detectors, instrumentations and methods, applications. <b>Eddy Current Testing-</b> Generation of eddy currents, properties of eddy currents, Eddy current sensing elements, probes, instrumentation, types of arrangement, applications, advantages, limitations, interpretation/evaluation.</p>	<b>08 Hours/ L3</b>

<p><b>Module 4: ULTRASONIC TESTING (UT) AND ACOUSTIC EMISSION (AE)</b>          Ultrasonic Testing-Principle, Transducers, transmission and pulse-echo method, straight beam and angle beam, instrumentation, data representation, A/Scan, B- scan, C-scan. Phased Array Ultrasound, Time of Flight Diffraction. Acoustic Emission Technique –Principle, AE parameters, Applications</p>	<p><b>10 Hours/ L3</b></p>
<p><b>Module 5: RADIOGRAPHY (RT)</b>          Principle, interaction of X-Ray with matter, imaging, film and film less techniques, types and use of filters and screens, geometric factors, Inverse square, law, characteristics of films - graininess, density, speed, contrast, characteristic curves, Penetrometers, Exposure charts, Radiographic equivalence. Fluoroscopy- Xero-Radiography, Computed Radiography, Computed Tomography</p>	<p><b>08 Hours/ L3</b></p>

**COURSE OUTCOMES:**

**Upon completion of this course, student will be able to:**

CO832.1	Explain the fundamental concepts of NDT
CO832.2	Discuss the different methods of NDT
CO832.3	Explain the concept of Thermography and Eddy current testing
CO832.4	Explain the concept of Ultrasonic Testing and Acoustic Emission
CO832.5	Explain the concept of Radiography

**COURSE: FLIGHT TESTING**

<b>Course Code</b>	<b>22ANE833</b>	<b>CIE Marks</b>	<b>50</b>
<b>Hours/Week (L: T: P)</b>	<b>3:0:0</b>	<b>SEE Marks</b>	<b>50</b>
<b>No. of Credits</b>	<b>3</b>	<b>Examination Hours</b>	<b>03</b>

**Pre-requisite:** Aircraft Performance

Aircraft Stability and control

**Course Learning Objectives:** To enable students to apply the knowledge of Flight Testing in broad domain of Aeronautical Engineering by making them to learn:

<b>CLO1</b>	Scope of flight testing, its types and reducing uncertainty.
<b>CLO2</b>	Purpose, scope and working of various instruments employed for flight-testing.
<b>CLO3</b>	Performance of flight at different operating conditions.
<b>CLO4</b>	Stability and control aspects at various flight condition.
<b>CLO5</b>	Various regulations and recovery techniques.

<b>Content</b>	<b>No. of Hours/RBT levels</b>
<p><b>Module 1: INTRODUCTION TO FLIGHT TESTING</b> Purpose and scope of flight-testing, basic definition, types of flight tests, sequence of flight testing, planning the test program, governing regulations. Aircraft weight and center of gravity, flight testing tolerances. Method of reducing data uncertainty in flight test data -sources and magnitudes of error, avoiding and minimizing errors.</p>	<b>08 Hours/ L3</b>
<p><b>Module 2: FLIGHT TEST INSTRUMENTATION</b> Planning flight test instrumentation, sensing and transducing techniques. Measurement of linear and angular displacements, velocities and accelerations, vibration, force, temperature - onboard and ground based data acquisition system. Radio telemetry</p>	<b>08 Hours/ L3</b>
<p><b>Module 3: PERFORMANCE FLIGHT TESTING - RANGE, ENDURANCE AND CLIMB</b> Airspeed –in flight calibration. Level flight performance for propeller driven aircraft and for Jet aircraft - Techniques and data reduction. Range and endurance estimation of propeller and jet aircraft. Climb performance methods. Turning performance limitations. Drag estimation. Take-off and landing - methods, procedures and data reduction.</p>	<b>08 Hours/ L3</b>
<p><b>Module 4: STABILITY AND CONTROL</b> Flight test Methods: Static longitudinal stability; Dynamic longitudinal stability. Lateral and directional static stability: Lateral and directional dynamic stability, Data reduction. Maneuvering stability methods, Regulations and data reduction.</p>	<b>10 Hours/ L3</b>

<b>Module 5: FLYING QUALITIES:</b> MIL and FAR regulations. Cooper-Harper scale. Pilot rating. Flight test procedures. stall and spin- regulations, test and recovery techniques. Dive testing for flutter, vibration and buffeting.	08 Hours/ L3
---	--------------

**COURSE OUTCOMES:**

**Upon completion of this course, student will be able to:**

<b>CO833.1</b>	Review the scope of flight testing, its types and reducing uncertainty.
<b>CO833.2</b>	Identify the purpose, scope and working of various instruments employed for flight-testing.
<b>CO833.3</b>	Examine the performance of flight at different operating conditions.
<b>CO833.4</b>	Illustrate the stability and control aspects at various flight condition.
<b>CO833.5</b>	Explain the various regulations and recovery techniques.

<b>Course Code</b>	<b>22ANE834</b>	<b>CIE Marks</b>	<b>50</b>
<b>Hours/Week (L: T: P)</b>	<b>3:0:0</b>	<b>SEE Marks</b>	<b>50</b>
<b>No. of Credits</b>	<b>3</b>	<b>Examination Hours</b>	<b>03</b>

**Pre requisite:** Management of Entrepreneurship

**Course Objectives:** To enable students to apply the knowledge of Total Quality Management in broad domain of aeronautical engineering by making them to learn:

<b>CLO1</b>	To learn about the evolution and the basic concepts of quality.
<b>CLO2</b>	To understand the various principles, practices of TQM to achieve quality.
<b>CLO3</b>	To learn the various statistical approaches for Quality control.
<b>CLO4</b>	To understand the TQM tools for continuous process improvement.
<b>CLO5</b>	To learn the importance of ISO and Quality systems.

<b>Content</b>	<b>No. of Hours/RBT levels</b>
<b>Module 1: INTRODUCTION TO TQM</b> Need for quality – Evolution of quality – Definition of quality – Dimensions of product and service quality – Basic concepts of TQM – TQM Framework – Barriers to TQM Contributions of Quality Gurus — Deming’s 14 point principles – Crosby’s 14 point principles – Juran Triology.	<b>08 Hours/ L3</b>
<b>Module 2: TQM PRINCIPLES</b> Quality statements – Customer focus –Customer orientation, Customer satisfaction, Customer complaints, Customer retention – Continuous process improvement – PDCA cycle, 5s, Kaizen –Supplier partnership –Partnering, Supplier selection, Supplier Rating	<b>08 Hours/ L3</b>
<b>Module 3: TOOLS &amp; TECHNIQUES I</b> The seven traditional tools of quality- Histogram – Pareto diagram – Cause and effect diagram – Flow charts –Check sheet – Scatter diagram – Quality control charts – The seven new tools of quality – Why-why analysis – Affinity diagram – Interrelationship digraph – Tree diagram –Prioritization matrix – Process decision program chart – Activity network diagram.	<b>10 Hours/ L3</b>
<b>Module 4: TQM TOOLS AND TECHNIQUES II</b> Quality Circles - Cost of Quality – Quality Function Deployment (QFD) - Taguchi quality loss function - TPM - Concepts, improvement needs - Performance measures.	<b>08 Hours/ L3</b>

<b>Module 5: QUALITY MANAGEMENT SYSTEM</b> Introduction—Benefits of ISO Registration— ISO 9000 Series of Standards— Sector-Specific Standards— AS 9100, TS16949 and TL 9000-- ISO 9001 Requirements— Implementation— Documentation— Internal Audits— Registration-- ENVIRONMENTAL MANAGEMENT SYSTEM: Introduction—ISO 14000 S	<b>08 Hours/ L3</b>
--	---------------------

**COURSE OUTCOMES:**

**Upon completion of this course, student will be able to:**

<b>CO834.1</b>	Illustrate basic concepts of quality gurus.
<b>CO834.2</b>	Apply the knowledge of TQM principles.
<b>CO834.3</b>	Choose the appropriate the statistical tool to achieve the quality control.
<b>CO834.4</b>	Identify principles of continuous process improvement tools.
<b>CO834.5</b>	Apply the knowledge of quality systems.

**Textbooks:**

**Scheme of Examination: Semester End Examination (SEE):**

SEE Question paper is to be set for 100 marks and the marks scored will be proportionately reduced to 50. There will be two full questions (with a maximum of four sub questions) from each module carrying 20 marks each. Students are required to answer any **five full questions** choosing at least **one full question from each module**.

**Continuous Internal Evaluation (CIE):**

Three Tests are to be conducted for 40 marks each. CIE is executed by way of quizzes

Table 1: Distribution of weightage for CIE&amp; SEE of Regular courses

	Component	Marks	Total Marks
CIE	CIE Test-1	40	50
	CIE Test-2		
	CIE Test-3		
	Quiz 1/AAT	10	
SEE	Semester End Examination	50	50
<b>Grand Total</b>			<b>100</b>

## SEMESTER -VIII

### Project Phase II

Course Code	22ANE84	CIE Marks	50
Hours/Week (L: T: P)	0:0:20	SEE Marks	50
No. of Credits	12	Examination Hours	03

CONTENT	No. of Hours/ RBT levels
<p><b>CIE procedure for Project Work Phase - II:</b></p> <p><b>a. Single discipline:</b> The CIE marks shall be awarded by a committee consisting of the Head of the concerned Department and two senior faculty members of the Department, one of whom shall be the Guide.</p> <p>The CIE marks awarded for the project work phase -2, shall be based on the evaluation of project work phase -2 Report, project presentation skill and question and answer session in the ratio 50:25:25. The marks awarded for the project report shall be the same for all the batch mates using Rubrics.</p> <p><b>b. Interdisciplinary:</b> Continuous Internal Evaluation shall be group wise at the college level with the participation of all guides of the college. Participation of external guide/s, if any, is desirable.</p> <p>The CIE marks awarded for the project work phase -2, shall be based on the evaluation of project work phase -2 Report, project presentation skill and question and answer session in the ratio 50:25:25. The marks awarded for the project report shall be the same for all the batch mates as per Rubrics covering all Program Outcomes.</p> <p><b>SEE for Project Work Phase - II:</b></p> <p><b>a. Single discipline:</b> Contribution to the project and the performance of each group member shall be assessed individually in semester end examination (SEE) conducted at the department.</p> <p><b>b. Interdisciplinary:</b> Contribution to the project and the performance of each group member shall be assessed individually in semester end examination (SEE) conducted separately at the departments to which the student/s belong.</p>	

Individual student performance are evaluated based on the following COs :

<b>CO84.1</b>	Able to make comprehensive use of the technical knowledge gained from previous courses
<b>CO84.2</b>	Able to understand technologies concerned with the project
<b>CO84.3</b>	Able to apply project management skills (scheduling work, procuring parts and documenting expenditures and working within the confines of a deadline).
<b>CO84.4</b>	Able to analyze, develop and demonstrate the proposed work
<b>CO84.5</b>	Able to communicate technical information by means of ethical writing and presentation.

Table 1: Distribution of weightage for CIE of Regular courses

	Component	Marks	Total Marks
CIE	Review-1	<b>100</b>	<b>100</b>
	Review-2		
SEE	Semester End Examination	<b>100</b>	<b>100</b>
<b>Grand Total</b>			<b>200</b>

## SEMESTER -VIII

### COURSE: TECHNICAL SEMINAR

Course Code	22ANES85	CIE Marks	50
Hours/Week (L: T: P)	0:0:2	SEE Marks	50
No. of Credits	1	Examination Hours	03

#### Technical Seminar:

All the students admitted to IV year of BE/B. Tech shall have to do power point presentation on any topic related to Aeronautical Engineering during VIII Semester and make a report of the presented topic referring to journals in that area. The prescribed credit shall be included in VIII Semester and shall be considered for the award of bachelor's degree. Those who do not present the Technical Seminar shall be declared fail and shall have to complete during subsequent University examination after satisfying the Technical Seminar requirements.

#### CIE procedure for Seminar:

The CIE marks shall be awarded by a committee consisting of the Head of the concerned Department and two senior faculty members of the Department, one of whom shall be the Guide. The CIE marks awarded for the Seminar shall be based on the evaluation of Seminar report, presentation skill and question and answer session in the ratio 50:25:25.

Typical Evaluation pattern for regular courses is shown in Table 1:

Table 1: Distribution of weightage for CIE & SEE of Regular courses

	Component	Marks	Total Marks
CIE	Review	50	50
SEE	Technical Seminar Presentation + Report	50	50
<b>Grand Total</b>			<b>100</b>

## SEMESTER -VIII

### COURSE: INTERNSHIP

Course Code	22INT86	CIE Marks	100
Hours/Week (L: T: P)	0:0:4	SEE Marks	--
No. of Credits	2	Examination Hours	03

### Internship:

All the students admitted to III year of BE/B. Tech shall have to undergo mandatory internship of 4 weeks during the vacation of VI and VII semesters and /or VII and VIII semesters.

Internship examination shall be conducted during VIII semester and the prescribed credit shall be included in VIII semester. Internship shall be considered as a head of passing and shall be considered for the award of degree. Those, who do not take-up/complete the internship shall be declared fail and shall have to complete during subsequent University examination after satisfying the internship requirements.

### Course Outcomes

CO86.1	Analyze and review various research papers to identify Aeronautical related topic
CO86.2	Understand new trends in Aeronautical field having cutting edge technologies in the selected topic
CO86.3	Impart skills in preparing detailed report describing the topic and results
CO86.4	Able to summarize the industrial Exposure and practices
CO86.5	Able to communicate technical information by means of ethical writing and presentation.

### CIE procedure for Internship:

The CIE marks shall be awarded by a committee consisting of the Head of the concerned Department and two senior faculty members of the Department, one of whom shall be the Guide.

The CIE marks awarded for the Internship shall be based on the evaluation of Internship report, presentation skill and question and answer session in the ratio 50:25:25.

### SEE for Internship:

Contribution to the Internship and the performance of each Student shall be assessed individually in the semester end examination (SEE) conducted at the department.

Typical Evaluation pattern for regular courses is shown in Table 1.

Table 1: Distribution of weightage for CIE & SEE of Regular courses

	Component	Marks	Total Marks
CIE	Review-2	50	50
SEE	Semester End Examination	50	50
<b>Grand Total</b>			<b>100</b>
