

GLOBAL ACADEMY OF TECHNOLOGY

(Autonomous) Approved by AICTE, New Delhi, Affiliated to VTU, Ideal
Homes Township, Rajarajeshwari Nagar, Bengaluru - 560098

Bachelor of Engineering (B.E)

Scheme & Syllabus I & II Semester: 2026-27 (EEE stream)

BE Programs: CS, IS, AI&DS, EC, CS-AI&ML, EE, ME, CE, AE, AI&ML
PG Programs: M. Tech (CSE), M. Tech (Structural Engg.), MBA
Ph.D. Programs: VTU Affiliated Research Centers in Engineering

GLOBAL ACADEMY OF TECHNOLOGY

Autonomous Institution Affiliated to Visveswaraya Technological University
Approved by UGC, AICTE and Govt of Karnataka

About GAT

Established in 2001, Global Academy of Technology (GAT) is one of the leading autonomous engineering institutions in Bengaluru, Karnataka, affiliated to Visveswaraya Technological University and approved by the All India Council for Technical Education. The institution is accredited by NAAC with 'A' Grade reflecting its commitment to quality education and continuous academic improvement. Situated in a serene and eco-friendly campus at Rajarajeshwari Nagar, Bengaluru, GAT provides a vibrant learning environment supported by modern infrastructure, advanced laboratories, digital classrooms, research facilities, innovation centers, and an extensive library with access to national and international resources.

GAT is dedicated to nurturing technically competent, socially responsible, and ethically grounded professionals through a balanced blend of academic rigor, practical exposure, research orientation, and value-based education. The institution offers undergraduate, postgraduate, and research programs in various disciplines of engineering, management, and applied sciences, designed to meet the evolving needs of industry and society. The curriculum emphasizes outcome-based education, interdisciplinary learning, experiential learning practices, project-based activities, internships, and industry collaboration to enhance employability and innovation skills among students.

The institution actively promotes research and development activities through funded projects, publications, patents, conferences, workshops, and collaborations with industries and academic organizations. Faculty members are highly qualified, experienced, and dedicated to mentoring students in academics, research, innovation, and professional growth. GAT also encourages participation in co-curricular and extracurricular activities through various student clubs, professional societies, cultural forums, sports activities, and community engagement initiatives, thereby fostering leadership qualities, teamwork, communication skills, and holistic personality development.

With a strong focus on academic excellence, discipline, inclusiveness, sustainability, and continuous improvement, Global Academy of Technology strives to create a transformative educational experience that empowers students to become competent engineers, innovative researchers, entrepreneurs, and responsible global citizens capable of addressing contemporary technological and societal challenges.

GLOBAL ACADEMY OF TECHNOLOGY

Autonomous Institution Affiliated to Visveswaraya Technological University
Approved by UGC, AICTE and Govt of Karnataka

VISION OF THE INSTITUTE

Become a premier institution imparting quality education in engineering and management to meet the changing needs of society.

MISSION OF THE INSTITUTE

- **M1:** Create environment conducive for continuous learning through quality teaching and learning processes supported by modern infrastructure
- **M2:** Promote Research and Innovation through collaboration with industries.
- **M3:** Inculcate ethical values and environmental consciousness through holistic education programs.

GLOBAL ACADEMY OF TECHNOLOGY

Autonomous Institution Affiliated to Visvesvaraya Technological University
Approved by UGC, AICTE and Govt of Karnataka

Rules & Regulations

- The academic programs shall be governed by the regulations of Visvesvaraya Technological University and the rules framed by the institution from time to time.
- Students admitted to the First Year B.E. program shall abide by all academic, administrative, and disciplinary regulations of the institution.
- Student Induction Program (SIP) will be conducted by the institute for newly admitted students as per the norms and guidelines prescribed by the All India Council for Technical Education (AICTE).
- Attendance in all theory, tutorial, practical, workshop, seminar, and activity classes is compulsory. Students shall satisfy the minimum attendance requirement prescribed by the Institution /University to become eligible to appear for examinations.
- Continuous Internal Assessment (CIA) and Semester End Examination (SEE) shall be conducted as per the norms and regulations prescribed by the Institution/University.
- Students shall maintain proper discipline and decorum within the campus and shall conduct themselves in a manner befitting the reputation of the institution.
- Ragging in any form is strictly prohibited inside and outside the campus. Any student found involved in ragging shall be liable for disciplinary action as per the provisions of the Anti-Ragging Act and University regulations.
- Students shall carry their identity cards while on campus and produce the same whenever demanded by authorized personnel.
- Use of mobile phones and other electronic gadgets during class hours, laboratories, library sessions, and examinations is prohibited unless specifically permitted for academic purposes.
- Students shall be punctual and regular in attending classes, laboratory sessions, mentoring activities, and institutional programs.
- Damage to institutional property, laboratory equipment, library resources, furniture, or infrastructure shall be viewed seriously, and the cost of such damage shall be recovered from the concerned student(s).
- Malpractice or misconduct during examinations shall attract disciplinary action as per University and institutional norms.
- Students shall follow the dress code and code of conduct prescribed by the institution from time to time.
- Submission of assignments, laboratory records, project work, and other academic requirements shall be completed within the stipulated time.
- Students are expected to make effective use of library facilities, digital learning resources, laboratories, innovation centers, sports, and other academic support systems provided by the institution.
- Students shall regularly check notices and communications displayed on notice boards, official website, ERP portal, or communicated through departments.
- The decision of the Principal and the competent authorities of the institution in all academic and disciplinary matters shall be final and binding on all students.

GLOBAL ACADEMY OF TECHNOLOGY

Bachelor of Engineering Scheme of Teaching and Examinations (2026) Outcome-Based Education (OBE) and Choice-Based Credit System (CBCS) (Effective from the academic year 2026-27) Common to all Engineering Programmes													
I Semester (EEE Stream)					(Physics Cycle)

Integrated courses (IC), combining theory with practical components.									
(i) Theory sessions shall be conducted for 3 hours per week, while the practical sessions shall be conducted for 2 hours per week.									
(ii) Theory components shall be evaluated through both Continuous Internal Evaluation (CIE) and Semester End Examination (SEE).									
(iii) The practical component shall be assessed only through CIE.									

GLOBAL ACADEMY OF TECHNOLOGY

The Mathematics/Physics courses shall be taught by a single faculty member per session, with no sharing of the course (subject) modules.

The tutorial sessions for the **mathematics course** shall be conducted in the laboratory environment using **Maxima/Mathematica/ Python/Scilab/MATLAB software** to enhance computational understanding and application skills (one hour for problem solving and one hour laboratory session).

GLOBAL ACADEMY OF TECHNOLOGY

All students admitted to the engineering program have to complete **Applied Mathematics-I and Applied Mathematics-II** in I and II semesters by selecting the courses prescribed for their stream, viz. CV, ME, EEE or CSE, under the heading Mathematics –I and Mathematics-II.

Those who have completed the physics course under the heading Applied Physics in I semester have to select the prescribed stream wise chemistry course under the heading Applied chemistry during II semester.

Programme Specific Courses (PSC): Programme Specific Courses (PSC) are a set of core courses tailored to a specific branch or discipline of engineering in which a student is enrolled (e.g., Mechanical Engineering, Computer Science, Civil Engineering, etc.). These courses are intended to provide students with in-depth knowledge and specialized skills essential for professional competence in the chosen field. Students must select and complete the course from this cycle that **corresponds to their admitted program stream**. Similarly, students are also required to choose and pass laboratory courses that are specific to their stream from the **Programme Specific Courses Laboratory (PSCL) cycle**.

Engineering Sciences Courses-I(ESC-I): These courses are designed to broaden the technical knowledge of students beyond their core area of study. These courses enable students to gain a foundational understanding of engineering principles from other stream courses. Students are required to select and complete two courses that are not belong to their admitted program /stream. For example, a student admitted to the any programme of the Civil Engineering /Civil Engineering stream should not select Introduction to Engineering Mechanics Sciences but any other two. One course shall be selected under ESC-I and another course under ESC-II. The two courses must be different from the other.

Computer-Aided Engineering Drawing: The courses under this category are stream-specific. Students must select and complete the course that corresponds to their admitted engineering stream.

The **Student Induction Programme (SIP)**, initiated by the All India Council for Technical Education (AICTE), is designed to help newly admitted students in technical institutions transition smoothly into the higher education environment. It aims to familiarize students with the institutional culture, foster connections with peers and faculty, and provide a foundation for holistic learning. Activities under SIP may include Physical Activities, Creative Arts, Universal Human Values, Literary Events, Proficiency Modules. Lectures shall be by Eminent Personalities, Local Area Visits, Department/Branch Familiarization, and Innovation-related sessions.

The first year of the Engineering programmes is composed of I semester, II semester and Summer Semester. SIP activities shall be scheduled in the afternoon sessions during the first week of class commencement of I and II semesters only.

The specific programmes to be conducted will be notified separately by the University via the academic calendar or through a separate notification.

AICTE Activity Points Requirement for BE/B.Tech. Programmes

As per AICTE guidelines (refer Chapter 6 – *AICTE Activity Point Program, Model Internship Guidelines*), in addition to academic requirements, students must earn a specified number of **Activity Points** to be earned is to be eligible for the award of their degree.

- **Regular students** admitted to a 4-year degree program must earn **100 Activity Points**.
- **Lateral entry students** (joining from the second year) must earn **75 Activity Points**.
- **Students transferred** from other universities directly into the fifth semester must earn **50 Activity Points** from the date of entry into VTU.

These Activity Points are **non-credit** and will not be considered for **the SGPA/CGPA** or be used for **vertical progression**. However, they are mandatory for the **award of the degree**, and the points earned will be reflected on the **eighth semester Grade Card**.

The hours spent for earning the activity points shall not be counted for regular attendance requirements. Students can accumulate these points at any time during their program, including on weekends, holidays, and vacations starting from the year of admission, provided they meet the minimum hours of engagement prescribed for each activity.

If a student fails to earn the required Activity Points, the eighth-semester Grade Card will be withheld until the requirement is fulfilled. Consequently, the degree will be awarded only after the Grade Card has been released.

Students admitted to a specific engineering stream are required to select and successfully complete Applied Mathematics-II and Applied Chemistry courses that are aligned to their program stream.									
Engineering Sciences Courses-II(ESC-II): These courses are designed to broaden the technical knowledge of students beyond their core area of study. These courses enable students to gain a foundational understanding of engineering principles from other disciplines. Students are required to select and complete a course under ESC-II that does not belong to their admitted program stream. Students should select a course other than that was selected under ESC-I and other than course not belonging to their branch/ stream.									

GLOBAL ACADEMY OF TECHNOLOGY

For the course ***Interdisciplinary Project (BPRJ209)***, it is mandatory to form a team comprising students from multiple engineering disciplines. For example, a project team may include students from Mechanical Engineering, Electronics and Communication Engineering (ECE), and Computer Science and Engineering (CSE), working collaboratively to design and implement the project.

DEPARTMENT OF MATHEMATICS

Course	Differential Calculus & Linear Algebra		
Course Code	BMATE26101		
Course Category	ASC		
Hours/Week (L: T: P)	3:2:0	No. of Credits	4
Self-Study hours/semester	65		
CIE Marks	50	SEE Marks	50

1. Course Description:

This course introduces fundamental concepts of differential calculus, ordinary differential equations, and linear algebra with emphasis on engineering applications. It enables students to analyze polar curves and curvature, approximate functions using series expansions, and solve problems using multivariable calculus. The course also develops the ability to model real-world systems using first and higher-order differential equations, including applications in electrical circuits. In addition, it equips students with linear algebra techniques to solve system-based problems such as traffic flow. Overall, the course builds essential analytical and problem-solving skills required for engineering studies.

2. Prerequisites:

A basic understanding of differential and integral calculus. Familiarity with algebra and coordinate geometry. Knowledge of fundamental differentiation techniques. Basic problem-solving and analytical skill.

3. Course Objectives: *By the end of this course, students will be able to:*

- Analyze polar curves and evaluate curvature and related geometric properties.
- Apply series expansions, Hospital's rule, and multivariable calculus techniques to solve problems.
- Solve first-order and nonlinear differential equations and apply them to engineering systems such as electrical circuits.
- Solve higher-order differential equations and apply them to physical systems.
- Apply linear algebra techniques to solve systems of equations and engineering problems.

4. Wks covered through this course – WK1, WK2, and WK4

5. Course Outcomes: *By the end of the course students will be able to,*

Course Outcome	Description	Mapped POs/PSOs	Blooms Taxonomy Level
C101.1	Apply the fundamental principles of differential calculus, multivariable calculus, ordinary differential equations, and linear algebra to formulate and solve mathematical problems.	PO1	L3

<i>C101.2</i>	Apply the principles of polar geometry, curvature, series expansions, and multivariable calculus to solve mathematical problems relevant to engineering and optimization.	PO1, PO2	L3
<i>C101.3</i>	Apply the techniques of ordinary differential equations and linear algebra to solve mathematical models arising in electrical circuits, network analysis, and engineering systems.	PO1, PO2	L3
<i>C101.4</i>	Analyze mathematical models using multivariable calculus, differential equations, and linear algebra to obtain appropriate mathematical solutions for engineering-related problems.	PO5, PO8	L4

6. CO-PO Articulation Matrix

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
<i>C101.1</i>	1	-	-	-	-	-	-	-	-	-	-
<i>C101.2</i>	2	1	-	-	-	-	-	-	-	-	-
<i>C101.3</i>	3	2	-	-	-	-	-	-	-	-	-
<i>C101.4</i>	-	-	-	-	1	-	-	1	-	-	-

7. Modular Topics

Module 1	Hours
Differential Calculus Polar curves, angle between the radius vector and the tangent, angle between the polar curves, Pedal equations. Curvature and radius of curvature in Cartesian, polar forms.	10
Module 2	Hours
Power series Expansions, indeterminate forms and multivariable calculus Maclaurin's series expansion for one variable. Indeterminate forms - L'Hospital's rule. Partial Differentiation: Partial derivatives, differentiation of composite functions, Jacobians. Maxima and minima for functions of two variables.	10
Module 3	Hours
Ordinary Differential Equations (ODE) of first order and first degree and nonlinear ODE	10

Exact and reducible to exact differential equations with integrating factor:- $1/N (\partial M/ \partial y - \partial N/ \partial x)$ and $1/ M (\partial N/ \partial x - \partial M/ \partial y)$. Linear and Bernoulli's differential equation. Orthogonal trajectories, L-R and C-R circuits. Non-linear differential equations: Introduction to general and singular solutions, Solvable for p only, Clairaut's equations, reducible to Clairaut's equations.	
Module 4	Hours
Ordinary differential equations of higher Order Higher-order linear ordinary differential equations with constant coefficients, homogeneous and non-homogeneous equations (e^{ax} , $\sin(ax + b)$, $\cos(ax + b)$, x^n), Method of variation of parameters, Cauchy's differential equations, L-C-R circuits.	10
Module 5	Hours
Linear Algebra Elementary transformations of a matrix, Echelon form, rank of a matrix, consistency of system of linear equations. Gauss elimination and Gauss – Seidel method to solve system of linear equations. Eigen values and eigen vectors of a matrix, Rayleigh's power method to determine the dominant eigen value and corresponding eigen vector of a matrix.	10

1. Course Description:

This course introduces integral calculus, vector calculus, numerical methods, and Laplace transforms with a strong emphasis on engineering applications. It enables students to evaluate multiple integrals for computing areas and volumes, analyze vector fields using gradient, divergence, and curl, and apply numerical techniques for solving equations, interpolation, integration, and differential equations. The course also develops the ability to use Laplace transforms for solving differential equations and modeling engineering systems. Overall, it builds analytical and computational skills essential for advanced engineering subjects and real-world problem solving.

2. Prerequisites:

- A basic understanding of differential and integral calculus
- Familiarity with algebra and coordinate geometry
- Knowledge of fundamental differentiation and integration techniques
- Basic problem-solving and analytical skills

3. Course Objectives: *By the end of this course, students will be able to:*

- Apply multiple integrals, Beta and Gamma functions to solve problems involving area and volume.
- Apply vector calculus concepts such as gradient, divergence, and curl to analyze engineering systems.
- Apply numerical methods for solving algebraic equations, interpolation, and numerical integration.
- Apply numerical techniques to solve ordinary differential equations arising in engineering applications.
- Apply Laplace transforms and inverse transforms to solve differential equations and engineering problems.

4. Wks covered through this course – WK1, WK2, and WK4

5. Course Outcomes: By the end of the course students will be able to,

Course Outcome	Description	Mapped POs/PSOs	Blooms Taxonomy Level
C201.1	Apply the fundamental concepts of integral calculus, vector calculus, numerical methods, and Laplace transforms to build the mathematical foundation required for electrical and electronics engineering applications.	PO1	L3
C201.2	Apply the principles of integral calculus and vector calculus to solve mathematical problems.	PO1, PO2	L3
C201.3	Apply the concepts of numerical methods and Laplace transforms to solve mathematical problems in electrical and electronics engineering	PO1, PO2	L3
C201.4	Analyze electrical and electronics engineering problems using concepts of calculus, numerical methods, and Laplace transforms to obtain appropriate solutions.	PO5, PO8	L4

6. CO-PO Articulation Matrix

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
C201.1	1	-	-	-	-	-	-	-	-	-	-
C201.2	2	1	-	-	-	-	-	-	-	-	-
C201.3	3	2	-	-	-	-	-	-	-	-	-
C201.4	-	-	-	-	1	-	-	1	-	-	-

7. Modular Topics

Module 1	Hours
Integral Calculus and its applications Multiple Integrals: Evaluation of double and triple integrals, change of order of integration, changing to polar coordinates. Areas and volume using double integration. Beta and Gamma functions: Definitions, properties, relation between Beta and Gamma functions.	10
Module 2	Hours
Vector calculus and its applications Vector differentiation: Scalar and vector fields, gradient of a scalar field, directional derivatives, divergence of a vector field, solenoidal vector, curl of a vector field, irrotational vector, physical interpretation of gradient, divergence and curl and scalar potential. Vector Integration: Line integrals, Statement of Green's and Stokes' theorem without verification problems.	10
Module 3	Hours

Numerical Methods-1 Solution of algebraic and transcendental equations: Regula-Falsi method, and Newton-Raphson method. Finite Differences and Interpolation: Forward and backward differences, Interpolation, Newton forward and backward interpolation formulae, Newton's divided difference formula. Numerical Integration: Trapezoidal rule, Simpson's 1/3rd rule and Simpson's 3/8th rule.	10
Module 4	Hours
Numerical Methods-2 Numerical solution of ordinary differential equations of first order and first degree: Modified Euler's method, Runge-Kutta method of fourth order, Milne's predictor corrector method and Adam-Bashforth predictor-corrector method.	10
Module 5	Hours
Laplace transforms Laplace transforms: Definition and Formulae of Laplace Transforms, Laplace Transforms of elementary functions. Properties–Linearity, Scaling, shifting property, differentiation in the s domain, division by t. Laplace Transforms of periodic functions, square wave, saw-tooth wave, triangular wave, full and half wave rectifier, Heaviside Unit step function. Inverse Laplace Transforms: Definition, properties, evaluation of Inverse Laplace Transforms using different methods, and applications to solve ordinary differential equations.	10

Self-Study hours/Semester	65		
CIE Marks	50	SEE Marks	50

1. Course Description:

This course introduces students to the fundamental principles of quantum mechanics and their role in understanding microscopic physical phenomena. It provides a strong foundation in the electrical properties of materials, superconductivity, and light-matter interaction. The course bridges core physics concepts with practical applications in photonics, semiconductor devices, and modern sensor technologies. Through a balanced mix of theory and laboratory experiments, students gain analytical and experimental skills essential for engineering applications. Overall, the course prepares learners to apply quantum and solid-state physics concepts in advanced electronic and photonic systems.

2. Prerequisites:

The course presumes prior exposure to higher secondary-level Physics and Mathematics, enabling students to understand fundamental physical concepts, apply mathematical techniques for problem-solving, and carry out basic experimental measurements. This includes familiarity with waves, optics, electricity and magnetism, atomic structure, and elementary calculus. Knowledge of basic laboratory practices and graphical data representation is advantageous. Such foundational preparation supports the achievement of course outcomes related to analytical thinking, application of scientific principles, and experimental proficiency.

3. Course Objectives:

- Learn the basic concepts in Physics in turn very essential in understanding and solving engineering related challenges.
- Make the students to gain practical knowledge which correlate with theoretical studies.
- Achieve perfection in experimental skills and ability to develop and fabricate engineering and technical equipment.

4. Wks covered through this course – WK1

5. Course Outcomes:

- By the end of the course students will be able to

Course Outcome	Description	Mapped POs/PSOs	Blooms Taxonomy Level
C102.1/ C202.1	Interpret the concepts of quantum mechanics & employ in electrical properties of metals and semiconductors.	PO1, PO2	L1, L2, L3
C102.2/ C202.2	Outline the fundamental phenomena, properties and applications of superconductivity.	PO1	L1, L2, L3
C102.3/ C202.3	Apply the concepts of photonics with their applications.	PO1, PO2	L1, L2, L3
C102.4/ C202.4	Illustrate the steps involved in the working of semiconducting devices and sensors.	PO1	L1, L2

6. CO-PO Articulation Matrix

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
C102.1/ C202.1	3	3	-	-	-	-	-	-	-	-	-
C102.2/ C202.2	2	-	-	-	-	-	-	-	-	-	-
C102.3/ C202.3	2	2	-	-	-	-	-	-	-	-	-
C102.4/ C202.4	2	-	-	-	-	-	-	-	-	-	-

7. Modular Topics

Module 1	Hours
Quantum Physics: de Broglie Hypothesis, Heisenberg's Uncertainty Principle and its application (Broadening of spectral lines), Wave Function, Time independent Schrödinger wave equation (Derivation), Physical significance, properties of a wave function and Born Interpretation, Eigen functions and Eigen values, Particle inside one-dimensional infinite potential well, Waveforms and Probabilities, Particle inside a finite potential well and quantum tunneling, Numerical Problems.	8
Module 2	Hours
Electrical Properties of Metals and Semiconductors	8

Failures of classical free electron theory, Matheissen's rule, Assumptions of Quantum Free Electron Theory, Density of States(Qualitative), Fermi Dirac statistics, Fermi Energy, Variation of Fermi Factor With Temperature and Energy, Expression for carrier concentration in a conductor, Mention of expression for electrical conductivity, Success of quantum free electron theory of metals, Derivation of electron concentration in an intrinsic semiconductor, Fermi level for intrinsic and extrinsic semiconductor (Qualitative) ,Hall effect, Numerical Problems.	
Module 3	Hours
Superconductivity Zero resistance state, Persistent current, Meissner effect, Critical temperature, Critical current (Silsbee Effect) – Derivation of expression of critical current for a cylindrical wire using ampere's law, Critical field, BCS Theory, Type-I and Type-II superconductors, Formation of Vortices, Explanation for upper critical field, Josephson junction, DC and AC SQUID (Qualitative), Numerical Problems.	8
Module 4	Hours
Photonics Interaction of radiation with matter – Einstein's A and B coefficients and derivation of expression for energy density, Prerequisites for lasing actions, Semiconductor diode LASER, Use of attenuators for single photon sources, Optical modulators – Pockel's effect, Kerr effect, Photodetectors – Single Photon Avalanche Diode, Optical fiber, Derivation of Numerical aperture, V-number (qualitative), Number of modes, optical fiber losses, Mach-Zehnder interferometer, Numerical problems.	8
Module 5	Hours
Semiconductor devices and Sensors Direct and indirect band gap, Zener Diode, LED, Photo Diode, Photo Transistor, Light dependent resistor, Resistance temperature detectors (high, medium, low), Sensing mechanisms, Piezo electric Sensors, Metal Oxide Semiconductor (MOS) gas sensors, Hall sensor, Superconducting Nanowire Single Photon Detector, Numerical Problems.	8

Lab Component			
Exercise	Experiment	Course Outcomes	RBT Level
1	Determination of wavelength of LASER using diffraction grating.	CO3	L3
2	Determination of acceptance angle and numerical aperture of the given optical Fiber.	CO3	L3
3	Determination of dielectric constant of the material of capacitor by charging and discharging method.	CO1	L3
4	Study the characteristics of a photodiode and determine the power responsivity and detectivity.	CO1	L3
5	Determination of Planck's constant using LEDs.	CO1	L3
6	Determination of Fermi energy of copper.	CO1	L3
7	Black-Box Experiment (Identification of basic electronic components).	CO1	L3
8	Study the I-V Characteristics of a Bipolar Junction Transistor and hence determine α and β .	CO1	L3
9	Resonance in LCR circuit and hence determine the inductance.	CO1	L3
10	Determine the energy gap of the given semiconductor.	CO1	L3

C102.4/C202.4	2	-	-	-	-	1	-	-	-	-	-

7. Modular Topics

Module 1	Hours
Dielectric and Magnetic Materials: Dielectrics: Introduction, Electrical Polarization Mechanisms, Internal fields in solids (qualitative), Clausius-Mossotti relation (Derivation) and its implications, Properties and Frequency dependence of Dielectric constant, Dielectric loss, Solid, Liquid and Gaseous dielectrics. Application of dielectrics in Capacitors, Transformers (Oils), Numerical Problems. Magnetic materials: Classification of magnetic materials, Weiss Molecular field theory of ferromagnetism (Qualitative), Curie Temperature, Ferromagnetic Hysteresis loop and Explanation using Domain theory, Energy loss, Hard and soft ferromagnetic materials and Applications, Inductors and chokes, Permanent Magnets, Numerical Problems	8
Module 2	Hours

Thermoelectric materials and devices: Thermo emf and thermo current, Seebeck effect, Peltier effect, Seebeck and Peltier coefficients, figure of merit -Z (Mention Expression), laws of thermoelectricity. Expression for thermo emf in terms of T_1 and T_2, Thermo couples, thermopile, Construction and Working of Thermoelectric generators (TEG) and Thermoelectric coolers (TEC), Applications: Exhaust of Automobiles, Refrigerator, Numerical Problems	8
Module 3	Hours
Electrical Properties of Metals and Semiconductors: Failures of classical free electron theory, Matheissen's rule, Assumptions of Quantum Free Electron Theory, Density of States (Qualitative), Fermi Dirac statistics, Fermi Energy, Variation of Fermi Factor With Temperature and Energy, Expression for carrier concentration in a conductor, Mention of expression for electrical conductivity, Success of quantum free electron theory of metals, Derivation of electron concentration in an intrinsic semiconductor, Fermi level for intrinsic and extrinsic semiconductor (Qualitative), Hall effect, Numerical Problems.	8
Module 4	Hours
Superconductivity Zero resistance state, Persistent current, Meissner effect, Critical temperature, Critical current (Silsbee Effect) – Derivation for a cylindrical wire using ampere's law, Critical field, BCS Theory, Type-I and Type-II superconductors, High T_c superconductors, Formation of Vortices,	8

Explanation for upper critical field, Josephson junction, DC Squid, Superconducting Magnet, MAGLEV vehicle, Numerical Problems.	
Module 5	Hours
Electrical Engineering Materials Rare earth materials, Role in energy systems, Electrical & Magnetic phase diagram, Examples & high magnetic field applications, Ceramics: Types, Materials, Applications, Electrostriction, Strain proportional to square of the electric field, Comparison with piezoelectric effect, Materials, Applications, Electrorheological (ER) materials, Principle, Viscosity changes under applied electric field, ER Fluids, Applications, Magnetorheological (MR) materials, Principle, Magnetic field-induced change in viscosity, MR Fluids, Applications, Numerical Problems	8

Lab Component			
Exercise	Experiment	Course Outcomes	RBT Level
1	Determination of wavelength of LASER using diffraction grating.	CO3	L3
2	Determination of acceptance angle and numerical aperture of the given optical Fiber.	CO3	L3

1. Course Description:

To understand advanced materials, nanotechnology, and energy devices used in modern and emerging electronic technologies.

To gain knowledge of electrochemical sensors, corrosion control, and e-waste management for sustainable engineering applications.

2. Prerequisites:

Basic knowledge of fundamental chemistry concepts such as atomic structure, chemical bonding, and electrochemistry.

Basic understanding of physics concepts, and laboratory practices such as handling glassware, safe handling of chemicals and simple experimental procedures.

3. Course Objectives:

To provide fundamental knowledge of advanced materials, electrochemical systems, and energy devices used in emerging electronic technologies.

To develop analytical and experimental skills for solving engineering problems and promoting sustainable practices such as corrosion control and e-waste management.

4. Wks covered through this course: WK1, WK2, WK3, WK4

5. Course Outcomes: By the end of the course students will be able to,

Course Outcome	Description	Mapped POs/PSOs	Blooms Taxonomy Level
C102.1/ C202.1	Describe the properties and behaviour of semiconductor materials, and evaluate their applications in electronic devices, energy storage and conversion systems.	PO1, PO2	L1, L2
C102.2/ C202.2	Understand the properties and applications of polymers and composites, nanomaterials, and quantum dots in modern engineering and electronic applications.	PO1, PO2	L1, L2
C102.3/ C202.3	Apply electrochemical principles to redox systems, corrosion control methods, coating technologies, sensors, and sustainable e-waste management practices in engineering applications.	PO1, PO2, PO6	L1, L2, L3
C102.4/ C202.4	Apply quantitative chemical analysis techniques using experimental and analytical skills.	PO1, PO2	L1, L2, L3

6. CO-PO Articulation Matrix:

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
C102.1/ C202.1	3	1	-	-	-	-	-	-	-	-	-
C102.2/ C202.2	3	2	-	-	-	-	-	-	-	-	-
C102.3/ C202.3	2	1	-	-	-	2	-	-	-	-	-
C102.4/ C202.4	2	3	-	-	-	-	-	-	-	-	-

7. Modular Topics:

Module-1 - Materials for Energy Devices	Hours
Semiconductors: Introduction, n-type and p-type semiconductor materials (organic and inorganic), difference between organic and inorganic semiconductors. Organic photovoltaics - working principle and applications. Energy Storage Devices: Introduction, classification of batteries-primary, secondary and reserve battery, characteristics - capacity, power density, shelf life & cycle life. Construction and working of lithium-ion battery and its advantages in EV applications. Construction and working of ultra-small asymmetric super capacitor and its applications. Energy Conversion Devices: Introduction, construction, working principle, advantages and limitations of solar photovoltaic cell (PV cell). Working principle and applications of Micro- electromechanical systems (MEMS)-based energy harvesters.	08

Module-2 -Nano and Quantum Dot Materials	Hours
Nano materials: Introduction, size dependent properties of nanomaterials - surface area, catalytic, optical properties and electrical conductivity. Quantum Dot Materials: Introduction, types and properties of quantum dots (QDs). Inorganic Quantum Dot Materials (IQDMs): Introduction, properties of silicon based QDs, Cd-Se Quantum Dots and its applications in optoelectronic devices. Organic Quantum Dot Materials (OQDMs): Introduction, synthesis and properties of chitosan-carbon quantum dots hydrogel and its applications in next-generation flexible and wearable electronics. Synthesis and properties of Graphene Quantum Dots using citric acid method and its applications in emerging electronics.	08
Module-3 -Functional Polymers and Hybrid Composites in Flexible Electronics	Hours
Polymers: Introduction, synthesis, conduction mechanism of polyaniline and its electronic devices applications. Synthesis and properties of Polyvinylidene Fluoride (PVDF) and its applications in E-nose devices. Polymer Composites: Introduction, synthesis and properties of epoxy resin-magnetite (Fe_3O_4) composite and applications. Synthesis and properties of Kevlar Fiber Reinforced Polymer (KFRP) for smart electronic devices applications. Stretchable and Wearable Microelectronics: Introduction, basic principle and working of lithography for micro-patterned copper deposition. Synthesis, properties and applications of PDMS (Polydimethylsiloxane) and its uses in e-skin (electronic skin) and RFID applications.	08
Module-4 -Electrode System and Electrochemical Sensors	Hours
Electrode System: Introduction, types of electrodes, reference electrode-construction, working and applications of calomel electrode. Ion selective electrode- definition, construction, working of glass electrode, determination of pH using glass electrode. Construction and working of concentration cell and numerical. Sensing Methods: Introduction, principle and instrumentation of colorimetric sensors; its application in the estimation of copper in PCBs. Principle and instrumentation of potentiometric sensors and its application in the estimation of iron in steel, conductometric sensors; its application in the estimation of acid mixture in the sample.	08
Module-5 -Corrosion Science and E-waste Management	Hours
Corrosion Chemistry: Introduction, electrochemical theory of corrosion, types of corrosion, differential metal corrosion in electronic circuits and differential aeration corrosion- waterline and pitting corrosion. Corrosion control- galvanization, anodization, cathodic protection Metal Finishing: Introduction, technological importance of metal finishing, difference between electroplating & electroless plating, electroplating of chromium for hard and decorative coatings, electroless plating of copper on	08

PCBs.	
E-waste: Introduction, sources of e-waste, need of e-waste management & effects of e-waste on environment and human health. Extraction of gold from e-waste from bioleaching method.	

Lab Component			
Exercise	Experiment	Course Outcomes	RBT Level
1	Estimation of total hardness of water by EDTA method.	C04	L3
2	Determination of chemical oxygen demand (COD) of industrial effluent sample.	C04	L3
3	Estimation of iron in TMT bar by diphenyl amine indicator method.	C04	L3
4	Determination of total alkalinity of given water sample.	C04	L3
5	Determination of Hydrogen Peroxide in PCB Cleaner (Permanganate method)	C04	L3
6	Estimation of acid mixture by conductometric sensor (Conductometry)	C04	L3
7	Estimation of iron in rust sample by Potentiometric sensor (Potentiometry)	C04	L3
8	Determination of pKa of vinegar using pH sensor (Glass electrode)	C04	L3
9	Estimation of copper present in e-waste by optical sensor (Colorimetry).	C04	L3
10	Determination of Viscosity coefficient of conductive Inks	C04	L3
11	Smartphone-Based colorimetric estimation of total phenolic content in coffee products.	C04	L3
12	Green synthesis of copper nanoparticles for conductive ink applications.	C04	L3

10. Evaluation Methodology

1. Continuous Internal Evaluation (CIE) = 50 marks
 2. Semester End Examination (SEE) = 50 marks
- Total = 100 marks

Evaluation Structure

Assessment	Actual Weightage in Marks	Final weightage in Marks
CIE1	50	Avg. of 2 CIEs out of 25
CIE2	50	
AAT	10	10
LAB	30	15
SEE	100	50
TOTAL		100

DEPARTMENT OF MECHANICAL ENGINEERING

Course	Computer Aided Engineering Drawing for EEE Stream		
Course Code	BCEDE26103/203		
Course Category	Engineering Science Course (ESC)		
Hours/Week (L: T: P)	2:0:2:0	No. of Credits	03
Self-Study hours/semester	34		
CIE Marks	50	SEE Marks	50

1. Course Description:

Computer Aided Engineering Drawing is designed for I/II Semester Engineering students of all branches. The course covers the fundamental concepts and principles of engineering drawing with emphasis on the use of drafting and CAD software tools. Engineering drawing serves as a graphical medium for expressing technical details without language barriers and is therefore regarded as the universal language of engineers. Engineering drawings play a vital role in communicating technical information among engineers through standardized conventions, rules, and practices. The course aims to develop students' visualization skills and drafting abilities required to create and interpret engineering drawings for the design and manufacturing of components in various fields of engineering.

2. Prerequisites: NA

3. Course Objectives:

- Explain BIS conventions and standards used in engineering drawing.
- Construct orthographic projections of engineering components in different positions.
- Create isometric projections of simple and combined solids
- Utilize CAD software tools to generate engineering drawings and basic 3D models.

4. Wks covered through this course: WK2, WK3, WK4, WK6

5.Course Outcomes: By the end of the course students will be able to,

Course Outcome	Description	Mapped POs/PSOs	Blooms Taxonomy Level
C103.1/C203.1	Illustrate the orthographic projections of points, lines, and planes using standard engineering drawing conventions.	PO1, PO8, PO9,	L3
C103.2/C203.2	Sketch the orthographic projections of solids inclined to both horizontal and vertical planes.	PO1, PO8, PO9,	L3
C103.3/C203.3	Sketch the isometric projections of combinations of solids and develop the lateral surfaces of prisms and pyramids.	PO1, PO8, PO9,	L3
C103.4/C203.4	Execute 2D engineering drawings of lines, planes, and solids using CAD drafting software.	PO5, PO8, PO9	L3

CO-PO Articulation Matrix

POs →	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
COs ↓											
C103.1/ C203.1	3	—	—	—	—	—	—	1	1	—	—
C103.2/ C203.2	3	—	—	—	—	—	—	1	1	—	—
C103.3/ C203.3	3	—	—	—	—	—	—	1	1	—	—
C103.4/ C203.4	—	—	—	—	3	—	—	1	1	—	—

6.Modular Topics

Module 1	Hours
Module 1: Introduction to Engineering Drawing & Orthographic Part A: Projections of points and lines - Significance of engineering drawing, BIS conventions, freehand sketching, and scales. Introduction to CAD software, coordinate systems, and reference planes (HP, VP, RPP, and LPP) in 2D and 3D environments. Selection of drawing sheet size and scales. Basic CAD commands and creation of geometric entities such as lines, coordinate points, axes, polylines, rectangles, polygons, splines, circles, ellipses, text, move, copy, offset, mirror, rotate, trim, extend, break, chamfer, fillet, and curves. Orthographic projections of points in first and third quadrants. Orthographic projections of straight lines using first-angle projection method: lines inclined to both reference planes, true and apparent lengths, true and apparent inclinations. Part B: Orthographic Projection of plane surfaces (first quadrant only)- Introduction, Projections of regular plane surfaces such as triangle, square, rectangle, pentagon, hexagon, and circle inclined to both HP and VP using change of position method. <i>Application on projections of Lines & Planes (For CIE only)</i>	18
Module 2	Hours
Module 2: Orthographic Projection of Solids Part A: Projection of Prisms	18

Introduction, types of solids, projections of right regular prisms resting on HP only: square prism, Cube(hexahedron), Pentagonal prism, and hexagonal prism in different positions inclined to both HP and VP. Part B: Projection of Pyramids and Other Solids Projections of right regular pyramids resting on HP only: square pyramid, pentagonal pyramid, hexagonal pyramid, Cone, and Tetrahedron in different positions inclined to both HP and VP. <i>Projections of Frustum of cone and pyramids (For practice only, not for CIE and SEE).</i>	
Module 3	Hours
Module 3: Part A: Isometric Projection (using isometric scale only) Introduction, Isometric scale, Isometric projection of combinations of solids (Maximum of two solids) like cube, regular prisms, cylinders, pyramids, cone, tetrahedron, frustum of pyramids, cone & sphere. <i>Conversion of simple isometric projections into orthographic views. (For practice only, not for CIE and SEE).</i> Part B: Development of Lateral Surfaces of Solids Development of lateral surfaces of right regular prisms, cylinders, pyramids and cones resting with base on HP only. Development of lateral surfaces of their frustums and truncations. Problems on applications of the development of lateral surfaces like funnels and trays.	16
Module 4	Hours
Module 4: Electrical Drawing (For CIE Only): Introduction to electrical drafting symbols and CAD tools used for electrical drawings. Practice on 2D drafting of basic electrical components such as switches, sockets, panels, junction boxes, antennas, and simple electric circuits. Introduction to schematic diagrams of automatic fire alarm systems, call bell systems, UPS systems, and basic power distribution systems. Concept of industrial electrical drawings, annotations, and standard drawing practices.	04

9. Evaluation Methodology

Scheme of Examination: (Theory courses)

Semester End Examination (SEE): The SEE Question paper is to be set for 100 marks, and the marks scored will be proportionately reduced to 50. Students are required to answer any three full questions, choosing at least one full question from each module.

Continuous Internal Evaluation (CIE): Two internal tests, each for **20 marks**, shall be conducted during the semester. The average of the two test scores shall be considered for awarding **20 marks** under CIE. In addition, **Activity Assessment Tasks (AATs)** shall carry **10 marks**, and the **Sketch Book evaluation** shall carry **20 marks**.

Some possible AATs:

Term Work: Students will be evaluated for their creativity and practical implementation of the problem. Case study-based teaching learning, Assignments, Seminars, model making, poster presentations, group discussions, quizzes, technical article reviews, design exercises, software simulations, hands-on lab activities, participation in technical competitions.

Self-Learning & Experiential Learning: Massive Open Online Courses (MOOCs), Virtual Labs, Simulation-Based Learning, E-Books and Digital Libraries, Online Certification Courses, Technical Article Reviews and Self-Directed Reading, Educational Video Resources, Online Discussion Forums, Model Making / Prototyping, Industrial Visits, Technical Competitions and Hackathons, Reverse Engineering Tasks, Software Tutorials and Practice, Online Quizzes & Practice Tests, Technical Blogs or e-Portfolios

Continuous Internal Evaluation (CIE):

Component		Marks	Total Marks
CIE	CIE Test-1	20	(Average of 2 CIE + AATs & Sketch Book) 50
	CIE Test-2	20	
	AATs	10	
	Sketch Book	20	
SEE	Semester End Examination	50	50
Grand Total			100

SEE Assessment: Maximum of **THREE QUESTIONS** will be set for SEE as per the pattern given below:

Scheme of Evaluation:

Modules	Marks Allocated
Module 1: Answer any ONE question out of TWO Questions from Projection of Points, Lines Or Projection of Planes	30
Module 2: Answer any ONE question out of TWO Questions from Projection of solids.	40
Module 3: Answer any ONE question out of TWO Questions from Isometric Projections & Development of Lateral Surfaces of Solids.	30
Total Marks	100

Question No.	Solutions and sketching in the sketch book	Computer Printout	Total Marks
1	15	15	30
2	20	20	40
3	15	15	30
Total Marks	50	50	100

Note: Students are required to submit the computer printouts along with the hand-drawn sketches at the end of the examination for evaluation.

a) Continuous Internal Evaluation (CIE) = 50 marks

b) Semester End Examination (SEE) = 50 marks

Total = 100 marks

DEPARTMENT OF ARTIFICIAL INTELLIGENCE AND DATA SCIENCE

Course	Introduction to AI and Applications		
Course Code	BAIA26103/203		
Course Category	ETC		
Hours/Week (L: T: P)	3:0:0	No. of Credits	03
Self-Study hours/semester	45		
CIE Marks	50	SEE Marks	50

1. Course Description:

This course introduces the fundamental concepts of Artificial Intelligence, including intelligent agents and search algorithms for problem-solving. It covers data pre-processing and feature engineering paradigms. The course also explores expert systems and equips learners to apply and analyze AI techniques in real-world scenarios.

2. Prerequisites:

Understanding of basic mathematics including:

- Linear algebra (vectors, matrices)
- Probability and statistics
- Basic calculus

Concepts such as logic, sets, relations, and graphs.

Understanding of problem-solving techniques and computational thinking.

3. Course Objectives:

- Interpret the fundamental concepts of AI agents and environments and their applications in Artificial Intelligence.
- Understand and compare various search strategies employed by intelligent agents for problem-solving.
- Relate, compare, and contrast different machine learning paradigms and understand the role of data in AI.
- Understand the principles and applications of Expert Systems in solving real-world problems using Artificial Intelligence.

4. Wks covered through this course - WK2, WK3 and WK4

5. Course Outcomes: By the end of the course students will be able to,

Course Outcome	Description	Mapped POs/PSOs	Blooms Taxonomy Level
C103.1 /C203.1	Elucidate the reasons behind AI for being an important field of study, and understand the types of agents, environments, and their relationships	PO1, PO2, PO3, PO5, PO11	L2
C103.2/ C203.2	Describe the Informed search algorithms that make up the fundamental building blocks of AI.	PO1, PO2, PO3, PO5, PO11	L3
C103.3/ C203.3	Understand the importance of pre-processing, types of data, and data transformation.	PO1, PO2, PO3, PO5, PO11	L3
C103.4/ C203.4	Understand different forms of learning and the importance of the structure of the data used by the agent.	PO1, PO2, PO3, PO5, PO11	L3
C103.5/ C203.5	Explore the application of AI ideas in the development of expert systems.	PO1, PO2, PO3, PO5, PO11	L3

6. CO-PO Articulation Matrix

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
C103.1/C203.1	3	3	3	-	2	-	-	-	-	-	2
C103.2/ C203.2	3	3	3	-	2	-	-	-	-	-	2
C103.3/ C203.3	3	3	3	-	2	-	-	-	-	-	2
C103.4/ C203.4	3	3	3	-	2	-	-	-	-	-	2
C103.5/ C203.5	3	3	3	-	2	-	-	-	-	-	2

7. Modular Topics

Module 1	Hours
Introduction to AI What is AI? History of AI, Agents and Environments, Structure of Agents, Types of Agents: Simple reflex agents, Model-based reflex agents, Goal-based agents, Utility- based agents, Learning agents. Textbook 1: Chapters 1 and 2	8
Module 2	Hours
Informed Search Algorithms Search strategies, Best First Search, A*, AO*, Hill Climbing, Generate & Test, Alpha- Beta pruning, Min-max search. Textbook 1: Chapter 3	8
Module 3	Hours
Data pre-processing Types of Data: Structured and Unstructured Data, Quantitative and Qualitative Data, Four Levels of Data (Nominal, Ordinal, Interval, Ratio Level). Data Transformation: Handling imbalanced data, Sampling theory, Techniques of sampling, and Quantile transformers. Textbook 3: Chapter 3	8
Module 4	Hours
Feature Engineering and Learning Feature Engineering: Processes and Techniques, Forms of Learning: Introduction to Supervised, Unsupervised, Semi-Supervised and Reinforcement Learning. Textbook 3: Chapter 7	8
Module 5	Hours
Expert Systems What an expert system is; types of expert system, Characteristics of expert system, basic components of an expert system, Expert System Architecture, Rule-based Expert systems: components of rule-based expert system, Structure of rule-based system, Conflict resolution, Uncertainty Management. Textbook 2: Chapter 20	7

Self-Study hours/semester	50		
CIE Marks	50	SEE Marks	50

1. Course Description: The course is designed for I/II semester engineering students of all branches. It covers fundamental concepts and principles of Engineering Mechanics, and the application of these basic principles to solve static equilibrium problems related to Mechanical, Civil, Automobile, Aeronautical, Mechatronics, Robotics, and other allied Engineering branches where analysis for forces and displacement of particles or rigid bodies is involved. It also introduces real-life problems involving forces and computer applications to solve Engineering Mechanics problems.

2. Prerequisites: Basic Mathematics, Physics (Forces and Equilibrium)

3. Course Objectives:

- Apply principles of equilibrium to particles and rigid bodies.
- Determine centroid and moment of inertia of engineering sections.
- Apply frictional systems and truss members.

4. Wks covered through this course –WK1, WK2, WK3 and WK4

5. Course Outcomes: *By the end of the course students will be able to,*

Course Outcome	Description	Mapped POs/PSOs	Blooms Taxonomy Level
C104A.1/ C204A.1	Apply principles of forces, moments and equilibrium to solve engineering mechanics problems.	PO1, PO2	L3

C104A.2/ C204A.2	Determine the centroid and moment of inertia of plane and built-up sections and evaluate their significance in engineering applications.	PO1	L3
C104A.3/ C204A.3	Apply frictional forces, simple machines, linear motion and projectile motion to determine the response of mechanical systems under different operating conditions.	PO1, PO2	L3
C104A.4/ C204A.4	Apply D'Alembert's principle, dynamic equilibrium and the motion of connected bodies, including pulley systems, to solve practical engineering mechanics problems.	PO1, PO2	L3

6. CO-PO Articulation Matrix

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
C104A.1/C204A.1	3	3	-	-	-	-	-	-	-	-	-
C104A.2/C204A.2	3	-	-	-	-	-	-	-	-	-	-
C104A.3/C204A.3	3	3	-	-	-	-	-	-	-	-	-
C104A.4/C204A.4	3	3	-	-	-	-	-	-	-	-	-

7. Modular Topics

Module 1	Hours
Introduction to Engineering Mechanics: Basic idealization and principles in Engineering Mechanics. Newton's laws of motion, units and dimensions, scalar, and vectors. Force and Systems of Forces, Moment of a force and couple. Lami's theorem: Equations of equilibrium for coplanar concurrent force systems. (Simple numerical, No derivation of Lami's theorem)	8
Module 2	Hours
Equilibrium of Forces: Free body diagrams, Vector representation of forces, Varignon's theorem, Resolution and composition of forces – Coplanar concurrent and non-concurrent force system. Beams: Support reactions for statically determinate beams at different loading conditions.	8
Module 3	Hours

Centroid: Importance of centroid and centre of gravity, methods of determining the centroid, locating the centroid of plane laminae from first principles, centroid of built-up sections. Numerical examples	8
Module 4	Hours
Moment of Inertia: Importance of Moment of Inertia, method of determining the second moment of area (moment of inertia) of plane sections from first principles. Friction: Introduction, Frictional force, Types of Friction-Static friction and Dynamic friction, Limiting friction, Laws of friction – Laws of Static friction and Laws of Dynamic friction, Angle of friction, Angle of Repose, Ladder friction. Problems on Static friction –Inclined plane and ladder friction.	8
Module 5	Hours
Trusses: Types of trusses, Assumptions in analysis, Analysis of determinate trusses by method of joints. Simple Machines: Introduction to Simple Machines (levers, pulleys). Mechanical advantage, Law of Machines and efficiency.	8

Total		100

DEPARTMENT OF ELECTRICAL & ELECTRONICS ENGINEERING

Course	Introduction to Electrical Engineering		
Course Code	BESC26104B/204B		
Course Category	ESC		
Hours/Week (L: T: P)	3:0:0	No. of Credits	03
Self-Study hours/semester	48		
CIE Marks	50	SEE Marks	50

- Course Description:** This course provides first-year engineering students with an introduction to the basic concepts of electrical engineering. It includes the study of DC and AC circuits, fundamental circuit analysis methods, and important electrical parameters such as voltage, current, power, and energy. The course also introduces three-phase systems, transformers, and induction motors that are commonly used in electrical and industrial systems. In addition, students gain awareness of modern topics such as renewable energy sources and electric vehicles. The aim of the course is to build a strong conceptual foundation that supports further learning in different engineering fields.
- Prerequisites:** Basic knowledge of Physics and Mathematics.
- Course Objectives:**
 - Apply basic electrical laws to analyze DC circuits.
 - Analyze single-phase AC circuits using phasor relationships and power concepts.
 - Explain the principles of three-phase circuits and synchronous generators.
 - Describe the construction and operating principles of single-phase transformers and three-phase induction motors.
 - Explain the importance of renewable energy systems, electric vehicles, and the necessity of earthing.
- Wks covered through this course – WK2 & WK3**

5. Course Outcomes: By the end of the course students will be able to,

Course Outcome	Description	Mapped POs/PSOs	Blooms Taxonomy Level
C104B.1/ C204B.1	Apply the fundamental electrical laws and network analysis techniques to solve DC and single-phase AC circuits.	PO1	L3
C104B.2/ C204B.2	Explain the principle of three-phase AC systems and the construction of synchronous generator, single-phase transformer, and three-phase Induction motor.	PO1	L2
C104B.3/ C204B.3	Apply the operating principles of transformers and Induction motors to solve numerical problems.	PO1	L3
C104B.4/ C204B.4	Explain the general structure of electrical power systems using a single-line diagram, green energy generation systems, electric vehicles and earthing.	PO1	L2

6. CO-PO Articulation Matrix

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
C104B.1/ C204B.1	3	-	-	-	-	-	-	-	-	-	-
C104B.2/ C204B.2	2	-	-	-	-	-	-	-	-	-	-
C104B.3/C204B.3	2	-	-	-	-	-	-	-	-	-	-
C104B.4/C204B.4	2	-	-	-	-	-	-	-	-	-	-

7. Modular Topics

Module 1	Hours
DC Circuits Basics concepts, Ohm's law, Kirchhoff's laws, analysis of series, parallel and series parallel circuits excited by independent voltage sources only. Power and energy in resistor. Analysis of Two loop circuits by Loop or mesh current method. (Two loop circuits only)	09
Module 2	Hours
Single Phase AC Circuits Basics Terminology: Generation of sinusoidal voltage, frequency of generated voltage, average value, root mean square value, form and peak factors. Analysis of Circuits: Voltage and current relationship, with phasor diagrams, in R, L, C, R-L, R-C and R-L-C series circuits. Concept of apparent, real, and reactive powers. Significance of power factor.	09
Module 3	Hours
Three Phase AC Circuits and Synchronous Generator Three Phase AC Circuits: Advantages of three phase systems, Generation of three phase voltages, meaning of phase sequence, Relationship between line and phase quantities for balanced star and delta connections for balanced loads. Synchronous Generator: Principle of operation and construction of Synchronous Generator, types and EMF equation (Excluding the derivation and Calculation of winding factors).	08

Module 4	Hours
Single-phase Transformer and Three Phase Induction Motor Single-phase Transformer: Principle of operation and construction, types, EMF equation, losses and efficiency calculations (Condition for maximum efficiency excluded). Three phase Induction Motor: Principle of operation and construction, types, concept of rotating magnetic field, slip and significance of slip, Advantages and applications. (Numerical problems on slip calculations only)	08
Module 5	Hours
Green Energy Sources and Electric vehicles Green Energy Sources: General structure of electrical power systems using single line diagram approach, Solar and Wind energy generation systems. Introduction to Electric vehicles: Overview and block diagram approach to electric vehicles. Earthing: Necessity of Earthing and Types of Earthing.	08

- vi. **Electrical Engineering Fundamentals** – Vincent Del Toro, Pearson, 2nd Edition (Recommended for all units).
- vii. **Non-Conventional Energy Resources** – Sobh Nath Singh, Pearson Education, 2nd Edition (Recommended for all units).

9. Evaluation Methodology:

Semester End Examination (SEE):

SEE Question paper is to be set for 100 marks and the marks scored will be proportionately reduce to 50.

The SEE Question Paper format is:

- Part A (20 Marks): 10 questions of two marks each (all compulsory)
- Part B (80 Marks): There will be two full questions (with a maximum of three sub questions) from each module carrying 16 marks each. Students are required to answer any five full questions choosing at least one full question from each module.

Continuous Internal Evaluation (CIE):

Two internal tests will be conducted, each for 50 marks. The average score of these tests will be scaled down to 30 marks and considered for the CIE. In addition, the CIE will include an AAT component of 20 marks.

Evaluation Structure

	Component	Marks	Total Marks
CIE	CIE Test-1	30	Avg. CIE + AAT = 50
	CIE Test-2	30	
	AAT	20	
SEE	Semester End Examination	100	50
Grand Total			100

DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING

Course	Introduction to Electronics and Communication Engineering		
Course Code	BESC26104C/204C		
Course Category	ESC		
Hours/Week (L: T: P)	3:0:0	No. of Credits	3
Self-Study hours/semester	48		
CIE Marks	50	SEE Marks	50

1. Course Description:

The course Introduction to Electronics and Communication is offered to second-semester non ECE students. This course provides a comprehensive foundation in electronics and communication, covering both analog electronics, digital electronics communication systems and Embedded Systems. It introduces semiconductor devices such as diodes, BJTs, and operational amplifiers, along with their characteristics, biasing methods, and practical applications. Students learn the principles of rectifiers, filter circuits essential for power supply and waveform generation. The course also covers number systems, Boolean algebra, logic gates, and combinational logic circuits for digital system design. Fundamentals of feedback, amplification, and frequency response are emphasized to build circuit analysis skills.

2. Prerequisites:

Basic Physics and Mathematics

3. Course Objectives:

- Operation of Semiconductor diode and its applications.
- Biasing circuits for transistor (BJT) as an amplifier.
- Op -amps and its applications.
- Number systems, Combinational circuits.
- Basics of Communication system and Embedded system.

4. Wks covered through this course – Any from WK1, WK2, WK5, WK6

5. Course Outcomes: By the end of the course students will be able to,

Course Outcome	Description	Mapped POs/PSOs	Blooms Taxonomy Level	No. of Hours	Marks
C104C.1/ C204C.1	Explain the operating principles and applications of semiconductor devices used in basic electronic systems.	PO1, PO2, PO9 PO11	L2	16	160
C104C.2/ C204C.2	Apply concepts of electronics to study amplifiers, feedback circuits and Op-Amps.	PO1, PO2, PO9, PO11	L2	10	100
C104C.3/ C204C.3	Use Boolean algebra to simplify combinational logic circuits.	PO1, PO2, PO9, PO11	L2	08	80
C104C.4/ C204C.4	Illustrate the concept of Communication system, Embedded System and their applications	PO1, PO2, PO9, PO11	L2	08	80

6. CO-PO Articulation Matrix

CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
C104C.1/ C204C.1	3	3							3		3
C104C.2/ C204C.2	3	2							1		1
C104C.3/C204C.3	3	2							1		1
C104C.4/C204C.4	3	2							1		1

7. Modular Topics

Module 1	Hours
Semiconductor Diode and Applications: Introduction, Forward and Reverse Bias: V-I Characteristics of PN Junction diode, Diode applications, working of Half wave rectifier, Advantages and Disadvantages, Center tapped Full Wave Rectifier-Operation, Advantages and Disadvantages, Full Wave Bridge Rectifier-Operation, Advantages and Disadvantages, Filters, Capacitor filter. Text1 (No Derivation, No Numerical, Given all formulas). Text 1	08
Module 2	Hours

BJT Biasing: Introduction, DC operating point and Load Line, Simpler Way of Drawing a D. C. Load Line, Methods of Transistor Biasing – Fixed Bias, Voltage Divider Bias. Text 1 Single Stage BJT amplifier: Introduction, Classification of amplifiers and Transistor as an Amplifier, RC Coupled Amplifier. Text 1 Feedback amplifiers: Introduction, Principles of Feedback, Advantages and Disadvantages of positive and negative feedback. Text 1	08
Module 3	Hours
Op-Amps and its Applications: Introduction, modes of operation, OpAmp parameters - Gain, Input resistance, Output resistance, CMRR, Slew rate, Bandwidth, Input offset voltage, Input bias Current and Input offset Current. Applications- Inverting amplifier, Non-Inverting Amplifier, Voltage Follower, Summer, Differential/Difference amplifier. Text 1	08
Module 4	Hours
Binary Systems: Binary numbers, Number base conversion, octal & Hexa Decimal Numbers and conversions, Numerical, 1's & 2's Complements. Text 2 Boolean algebra and Logic Circuits: Basic definitions, Axiomatic definition of Boolean algebra, Basic theorems and properties of Boolean algebra, Boolean functions, Digital logic gates, Realization of Boolean expressions. Text 2 Adders- Half adder, Full adder. Text 2	08
Module 5	Hours
Communication Systems: Introduction, Block diagram of a communication system (transmitter, channel, receiver); Radio frequency Spectrum, Modulation, Need for modulation, Methods of Modulation. Text 1 Embedded Systems: Definition, Embedded systems vs General Computing Systems, Classification of Embedded Systems, Major Application Areas of Embedded Systems, Elements of an Embedded System. Text 3	08

DEPARTMENT OF MECHANICAL ENGINEERING

Course	Introduction to Mechanical Engineering		
Course Code	BESC26104D / 204D		
Course Category	ESC		
Hours/Week (L: T: P)	3:0:0	No. of Credits	03
Self-Study hours/semester	48		
CIE Marks	50	SEE Marks	50

1. Course Description:

This course provides an overview of fundamental concepts and emerging technologies in Mechanical Engineering, including energy systems, vehicles, manufacturing processes, engineering materials, and automation technologies. It introduces students to the applications of mechanical engineering principles in solving real-world engineering problems and familiarizes them with modern advancements such as electric vehicles, drones, CNC machining, 3D printing, mechatronics, and smart materials. The course aims to develop basic technical knowledge, interdisciplinary awareness, and an understanding of the role of mechanical engineers in modern industries.

2. Prerequisites: -NA-

3. Course Objectives:

The objectives of the course Introduction to Mechanical Engineering are to:

- Introduce the fundamental concepts, principles, and applications of Mechanical Engineering in various industrial and societal domains.
- Familiarize students with energy conversion systems, automobile systems, engines, refrigeration systems, and emerging mobility technologies such as electric and hybrid vehicles.
- Provide basic knowledge of engineering materials, composite materials, smart materials, and their engineering applications.
- Develop an understanding of manufacturing processes, machine tools, CNC technology, and additive manufacturing techniques.
- Introduce modern concepts such as automation, mechatronics, sensors, drones, and integrated intelligent systems used in contemporary engineering practice.
- Create awareness about the role of mechanical engineers in solving real-world engineering problems and motivate students toward innovation, interdisciplinary learning, and career opportunities in Mechanical Engineering.

4. Wks covered through this course: WK3, WK4, WK8

5. Course Outcomes: By the end of the course students will be able to,

Course Outcome	Description	Mapped POs/PSOs	Blooms Taxonomy Level
C104D.1/ C204D.1	Demonstrate the working principles of energy conversion systems, vehicle systems, IC engines, electric and hybrid vehicles, and power transmission systems.	PO1, PO2	L3
C104D.2/ C204D.2	Select suitable engineering, composite, and smart materials for engineering applications based on their properties and characteristics.	PO1, PO2	L3
C204D.3/ C204D.3	Apply the principles of manufacturing to welding, machining, CNC, and additive manufacturing processes for engineering applications.	PO1, PO2, PO3, PO5, PO9	L3
C104D.4/ C204D.4	Apply the principles of automation, mechatronics, sensors, and integrated intelligent systems to modern mechanical engineering applications	PO1, PO2, PO3, PO5, PO9	L3

6. CO-PO Articulation Matrix

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
C104D.1/C204D.1	3	2	-	-	-	-	-	-	-	-	-
C104D.2/C204D.2	3	2	-	-	-	-	-	-	-	-	-
C204D.3/ 204D.3	3	2	1	-	1	-	-	-	1	-	-
C104D.4/ 204D.4	3	2	1	-	1	-	-	-	1	-	-

7. Modular Topics

Module 1	Hours
Introduction: Streams in mechanical engineering and their relevance/significance, role of mechanical engineers in solving the real case problems (with examples) Energy conversion: Introduction and basic working principles of the Pelton Turbine and Centrifugal pump. Vehicle systems: Identification of parts of vehicle systems such as steering system, brake system, gear system, working principle of Power steering (Layout of Automobile).	09
Module 2	Hours
Engines: Introduction, petrol engine, diesel engines, Working of four Stroke engines, applications. Insight into Future Mobility: Electric and Hybrid Vehicles, Components of Electric and Hybrid Vehicles. Advantages and disadvantages of EVs and Hybrid vehicles. Power Transmission systems: Classification of gears, simple & compound gear trains, concepts of automatic and CVT transmission.	08
Module 3	Hours

Engineering materials: Introduction, Classification, Ferrous and Non-Ferrous metals: Types, Properties and their applications. Composite materials: Introduction, Constituents of a composite, Classification, Types of Matrix and Reinforcement materials, Advantages, Disadvantages and Applications of composite materials. Smart materials: Introduction, Types - Piezoelectric materials, MR fluids, Shape memory alloys and Advantages, Disadvantages and Applications.	09
Module 4	Hours
Manufacturing overview, classification of manufacturing processes, process selection criterion. Principles of Welding, soldering, brazing. Introduction to machine tools – lathe, drilling and milling machine. Lathe operations: Turning, facing, knurling, Drilling machine operations: Drilling, reaming, tapping. Milling machine operations: End milling, face milling. Introduction to CNC, components, advantages and applications. Basic principles of 3D printing.	08
Module 5	Hours
Advances in Mechanical Engineering: Automation technology: Definition of automation, types of automation, basic elements of automation. Mechatronics systems: Definition of mechatronics, elements of mechatronics systems, examples. Elementary sensors: Working principle and applications of Potentiometer, capacitive sensor and optical encoders. Integrated system: Need for integration of technologies, ADAS (Advanced Driver Assistance System).	08

DEPARTMENT OF INFORMATION SCIENCE & ENGINEERING

Course	Essentials of Information Technology		
Course Code	BESC26104E / 204E		
Course Category	ESC		
Hours/Week (L: T: P)	3:0:0	No. of Credits	03
Self-Study hours/semester	48		
CIE Marks	50	SEE Marks	50

1. Course Description:

This course introduces essential information technology concepts for computing students. Students explore data storage and representation using binary number systems, computer architecture, and machine language fundamentals. Operating systems including their history, architecture, and process management are examined. Networking, internet protocols, the World Wide Web, and cybersecurity principles including the information security model and cyber hygiene are studied. Software engineering methodologies, the software lifecycle, and modular design are introduced. Database fundamentals and the relational model are covered. Website development using HTML and CSS, computer graphics overview, and ethical issues in information technology including ownership rules and online content complete the course.

2. Prerequisites:

Basics of Computer Usage; No prior programming experience required

3. Course Objectives:

1. Understand how data is stored and processed in binary form inside a computer system.
2. Explore IT infrastructure including operating systems, networking, and internet technologies.
3. Recognize cybersecurity threats and apply ethical principles in the use of information technology.
4. Apply basic software engineering and database concepts for application development.
5. Design and develop simple web pages and understand computer graphics fundamentals.

4. Wks covered through this course – Any from WK1, WK3, WK5, WK7, WK8

Autonomous Institution Affiliated to Visveswaraya Technological University
Approved by UGC, AICTE and Govt of Karnataka

<i>Course Outcome</i>	<i>Description</i>	<i>Mapped POs/PSOs</i>	<i>Blooms Taxonomy Level</i>
<i>C104.1E/ C204.1E</i>	Understand foundational concepts of data representation, algorithmic logic, cybersecurity, software engineering, and web development.	PO1, PO2	L2
<i>C104.2E/ C204.2E</i>	Explain how binary storage, system processes, network safeguards, databases, and graphics support information processing.	PO1, PO2	L2
<i>C104.3E/ C204.3E</i>	Understand the role of information encoding, computational procedures, cyber-ethics, development lifecycle, and interface design in responsible IT us.	PO1, PO2	L2
<i>C104.4E/ C204.4E</i>	Apply data handling, algorithm design, secure development, structured querying, and web construction to build IT solutions..	PO1, PO2	L3

[illegible]

7. Modular Topics

Module 1	Hours
Data Storage: Bits and Their Storage, Main Memory, Mass Storage, Representing Information as Bit Patterns, The Binary System, Storing Integers, Storing Fractions. Data Manipulation: Computer Architecture, Machine Language, Program Execution, Arithmetic/Logic Instructions, Communicating with Other Devices. Textbook 1: Chapter 1 (1.1–1.7), Chapter 2 (2.1–2.5)	08
Module 2	Hours
Operating Systems: The History of Operating Systems, Operating System Architecture, Coordinating the Machine's Activities, Handling Competition Among Processes, Security. Algorithms: The Concept of an Algorithm, Algorithm Representation, Algorithm Discovery. Textbook 1: Chapter 3, Chapter 5 (5.1–5.3)	08
Module 3	Hours
Networking and the Internet: Network Fundamentals, The Internet, The World Wide Web, Internet Protocols, Security. Cybersecurity: Overview – What is Cybersecurity? Brief History of Cybersecurity Events, The Basic Information Security Model, Cyber Hygiene, Teams in Cybersecurity. Ethical Issues in Information Technology: Overview, Ownership Rules, Ethics and Online Content. Textbook 1: Chapter 4; Textbook 2: Chapter 16, Chapter 17	08
Module 4	Hours
Software Engineering: The Software Engineering Discipline, The Software Life Cycle, Software Engineering Methodologies, Modularity, Tools of the Trade. Database Systems: Database Fundamentals, The Relational Model. Textbook 1: Chapter 7 (7.1–7.5), Chapter 9 (9.1–9.2)	08
Module 5	Hours
Introduction to HTML and Website Development: What is HTML? Cascading Style Sheets (CSS), Website Design and Storyboarding, Structure of a Website. Computer Graphics: The Scope of Computer Graphics, Overview of 3D Graphics, Modeling, Rendering. Textbook 2: Chapter 12; Textbook 1: Chapter 10 (10.1–10.4)	08

DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING

Course	Fundamentals of Electronics & Communication Engineering		
Course Code	BECE26105/205		
Course Category	PSC		
Hours/Week (L: T: P)	3:0:0	No. of Credits	3
Self-Study hours/semester	48		
CIE Marks	50	SEE Marks	50

1. Course Description:

The course Basic electronics is offered to second-semester Electronics and Communication Engineering (ECE) students. This course provides a comprehensive foundation in basic electronics, covering both analog and digital electronic systems. It introduces semiconductor devices such as diodes, BJTs, and operational amplifiers, along with their characteristics, biasing methods, and practical applications in amplification, regulation, and signal processing. Students learn the principles of rectifiers, filters, voltage regulators, and oscillator circuits essential for power supply and waveform generation. The course also covers number systems, Boolean algebra, logic gates, and combinational and sequential logic circuits for digital system design. Fundamentals of feedback, amplification, and frequency response are emphasized to build circuit analysis skills. Additionally, an introduction to communication systems and amplitude modulation provides insight into basic signal transmission concepts.

2. Prerequisites:

Basic Physics and Mathematics

8. Course Objectives:

- Introduce the basic concepts and applications of semiconductor diodes and rectifier circuits.
- Explain BJT biasing, amplification and feedback techniques.
- Familiarize students with operational amplifiers and their applications.
- Introduce the fundamental principles of analog and digital communication systems.
- Develop understanding of number systems, Boolean algebra and basic digital logic circuits.

9. Wks covered through this course: WK1, WK2, WK6

10. Course Outcomes: By the end of the course students will be able to

Course Outcome	Description	Mapped POs/PSOs	Blooms Taxonomy Level
CO105.1/ CO205.1	Explain the operating principles and applications of semiconductor devices used in basic electronic systems.	PO1, PO2, PO9, PO11	L2

CO105.2/ CO205.2	Apply concepts of electronics to study amplifiers, feedback circuits and Op-Amp applications	PO1, PO2, PO9, PO11	L2
CO105.3/ CO205.3	Explain communication systems by utilizing communication principles	PO1, PO2, PO9, PO11	L2
CO105.4/ CO205.4	Use Boolean algebra and number systems to realize basic digital circuits.	PO1, PO2, PO9, PO11	L2

11. CO-PO/PSO Articulation Matrix

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PSO1	PSO2
CO105.1/ CO205.1	3	3	-	-	-	-	-	-	2	-	2	-	-
CO105.2/ CO205.2	3	3	-	-	-	-	-	-	1	-	1	-	-
CO105.3/ CO205.3	3	1	-	-	-	-	-	-	1	-	2	-	-
CO105.4/ CO205.4	3	2	-	-	-	-	-	-	1	-	1	-	-
Average	3	2							1		1		

12. Modular Topics

Module 1	Hours
Semiconductor Diode and Applications: Introduction to semiconductor diode, Block diagram of DC regulated power supply, Half wave rectifier and full wave rectifier – Centre tapped rectifier, Bridge Rectifier. Performance analysis of rectifiers in terms of ripple factor and efficiency, Numerical (no derivations). Filters – Classification of filters and Capacitor filter. Zener diode: Reverse characteristic and Voltage Regulator. (Text 1)	09
Module 2	Hours
BJT Biasing: Introduction, DC operating point and Load Line, Methods of Transistor Biasing - Fixed/Base Bias, Voltage Divider Bias and numerical. (Text 1) Single Stage BJT amplifier: Introduction, Classification of amplifier and Transistor as an Amplifier, RC Coupled amplifier- Operation and frequency response, advantages and disadvantages. (Text 1) Feedback amplifiers: Introduction, Principles of Feedback, Properties/ Advantages of feedback. (Text 1)	09
Module 3	Hours
Op-Amps and its Applications: Introduction, modes of operation, Op-Amp parameters - Gain, Input resistance, Output resistance, CMRR, Slew rate, Bandwidth, Input offset voltage, Input bias Current and Input offset Current. Applications- Inverting amplifier, Non-Inverting Amplifier, Voltage Follower, Summer, Differential/Difference amplifier, Integrator and Differentiator. (Text 1)	08
Module 4	Hours
Elements of Communication Systems, Modulation- Amplitude Modulation, Frequency and Phase Modulation, Waveforms. (Excluding Derivation and Spectral Diagrams), Superheterodyne Receiver, Digital Communication (Block diagram of a typical digital communication system), Multiplexing, The Telephone Systems, Data Transmission, Digital Modulation, Transmission Lines, Radio Waves, Antennas, Satellite Communication, Principle of Operations of Mobile Phone, Optical Fibre Communication. (Text 2)	08
Module 5	Hours

Binary Systems: Binary numbers, Number base conversion, octal & Hexa Decimal Numbers and conversions, Numericals, 1's & 2's Complements. (Text 3) Boolean algebra and Logic Circuits: Basic definitions, Axiomatic definition of Boolean algebra, basic theorems and properties of Boolean algebra, Boolean functions, other logic operations, Digital logic gates, Realization of Boolean expressions. (Text 3) Combinational logic: Adders- Half adder, Full adder. (Text 3)	08
---	----

DEPARTMENT OF ELECTRICAL ENGINEERING

Course	Basics of Electrical Engineering		
Course Code	BBEE26105/205		
Course Category	PSC		
Hours/Week (L: T: P)	3:0:0	No. of Credits	3
Self-Study hours/semester	48		
CIE Marks	50	SEE Marks	50

- Course Description:** This course provides first-year engineering students with an introduction to the basic concepts of electrical engineering. It includes the study of DC and AC circuits, fundamental circuit analysis methods, and important electrical parameters such as voltage, current, power, and energy. The course also introduces three-phase systems, transformers, and induction motors that are commonly used in electrical and industrial systems. In addition, students gain awareness of modern topics such as renewable energy sources and electric vehicles. The aim of the course is to build a strong conceptual foundation that supports further learning in different engineering fields
- Prerequisites:** Basic knowledge of Physics and Mathematics, fundamental electrical concepts.
- Course Objectives:**
 - To understand the basic concepts of DC circuits and apply network laws for circuit analysis.
 - To analyze single-phase AC circuits using phasor concepts and understand different types of power.
 - To understand the principles of three-phase AC systems and synchronous generators.
 - To enable students to understand and apply the principles of operation, characteristics, and control methods of DC generators and motors for practical engineering applications.
 - To study the working principles of transformers and three-phase induction motors.
- Wks covered through this course – WK2 & WK3**

5. Course Outcomes: By the end of the course students will be able to,

Course Outcome	Description	Mapped Pos /PSOs	Blooms Taxonomy Level
CO105.1/ CO205.1	Apply circuit laws and techniques to DC circuits.	PO1	L3
CO105.2/ CO205.2	Apply phasor and power concepts to single-phase AC circuits and transformers.	PO1	L3
CO105.3/ CO205.3	Understand the principles and applications of three-phase systems, synchronous generators, and induction motors.	PO1	L2
CO105.4/ CO205.4	Apply DC machine principles to their operation, characteristics, and speed control	PO1	L3

6. CO-PO Articulation Matrix

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
CO105.1/ CO205.1	2	-	-	-	-	-	-	-	-	-	-
CO105.2/ CO205.2	2	-	-	-	-	-	-	-	-	-	-
CO105.3/ CO205.3	2	-	-	-	-	-	-	-	-	-	-
CO105.4/ CO205.4	2	-	-	-	-	-	-	-	-	-	-

7. Modular Topics

Module 1	Hours
DC Circuits Basics concepts, Ohm's law, Kirchhoff's laws, analysis of series, parallel and series parallel circuits excited by independent voltage sources only. Power and energy in resistor. Analysis of Two loop circuits by Loop or mesh current method. (Two loop circuits only)	08
Module 2	Hours
Single Phase AC Circuits Basics Terminology: Generation of sinusoidal voltage, frequency of generated voltage, average value, root mean square value, form and peak factors. Analysis of Circuits: Voltage and current relationship, with phasor diagrams, in R, L, C, R-L, R-C and R-L-C series circuits. Concept of apparent, real, and reactive powers. Significance of power factor.	08
Module 3	Hours

Three Phase AC Circuits and Synchronous Generator	
Three Phase AC Circuits: Advantages of three phase systems, Generation of three phase voltages, meaning of phase sequence, Relationship between line and phase quantities for balanced star and delta connections for balanced loads, two wattmeter methods. Synchronous Generator: Principle of operation and construction of Synchronous Generator, types and EMF equation (Excluding the derivation and Calculation of winding factors).	08
Module 4	Hours
DC Machines	
DC Generator: Construction and working principle, EMF equation, types of dc generators. DC Motor: working principle, back emf and its significance, types, Power and torque equation, Characteristics of dc series and shunt motor, speed control of dc motors, necessity of starter, 3-point starter.	10
Module 5	Hours
Single-phase Transformer and Three Phase Induction Motor	
Single-phase Transformer: Principle of operation and construction, types, EMF equation, losses and efficiency calculations (Condition for maximum efficiency excluded). Three phase Induction Motor: Principle of operation and construction, types, concept of rotating magnetic field, slip and significance of slip, Advantages and applications. (Numerical problems on slip calculations only)	08

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Course	Introduction to C Programming		
Course Code	BPLC26105E / 205E		
Course Category	Programming Language Course (Integrated Course)		
Hours/Week (L: T: P)	3:0:2	No. of Credits	4
Self-Study hours/semester	56		
CIE Marks	50	SEE Marks	50

1. Course Description:

This course introduces students to the fundamental concepts of computer architecture and problem-solving using C programming language. It covers programming constructs, control structures, arrays, functions, strings, pointers, structures and files. It transitions from basic algorithmic logic to advanced concepts like modular programming, pointers, and file management. The course enables students to design modular programs to solve real-world computational problems.

2. Prerequisites:

Students should have basic knowledge of computers and logical thinking.

3. Course Objectives:

The course will enable students to :

- Understand the fundamentals of programming including algorithms, flowcharts, and the basic structure of C programs, along with constants, variables, and data types.
- Apply operators, expressions, and decision-making constructs such as if-else, switch, and loops to develop simple C programs.
- Use arrays and strings in C for storing, processing, and manipulating data.
- Develop modular programs using user-defined functions, including parameter passing and return values.
- Understand and use structures and pointers for efficient data organization and memory handling in C programs.

4. Wks covered through this course –WK1, WK2, WK3, WK4, WK8

5. Course Outcomes:

By the end of the course students will be able to,

Course Outcome	Description	Mapped POs/PSOs	Blooms Taxonomy Level
C105E.1/ C205E.1	Apply the fundamental programming constructs of C to develop simple programs.	PO1	L3
C105E.2/ C205E.2	Implement the logical approaches to solve basic computational problems using C programming.	PO2, PO5	L3
C105E.3/ C205E.3	Experiment with arrays, strings and functions to perform data operations and develop modular C programs.	PO5	L3
C105E.4/ C205E.4	Develop C programs to solve real-world problems.	PO3, PO5, PO8, PO9	L3

6. CO-PO Articulation Matrix

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
C105E.1/C205E.1	3										
C105E.2/C205E.2		3			3						
C105E.3/C205E.3					3						
C105E.4/C205E.4			2		2			2	2		

7. Modular Topics

Module 1	Hours
Flowchart and Algorithms: Art of Programming through Algorithms & Flowcharts. Overview of C: History of C, Importance of C, Basic Structure of C Programs, Programming Style, Compiling and executing a 'C' Program. Constants, Variables and Data Types: Character Set, C Tokens, Keywords and Identifiers, Constants, Variables, Data Types, Declaration of Variables, Assigning Values to Variables, Defining Symbolic Constants, Declaring a Variables as Constants and Volatile, Input/Output Statements in C. Textbook: Chapter 1. 6, 2.1, 2.2, 2.8, 2.9, 2.10, Chapter 3.2 to 3.14, Chapter 5.1 to 5.5	8
Module 2	Hours

Operators: Introduction to Operators, Arithmetic Operators, Relational Operators, Logical Operators, Assignment Operators, Increment and Decrement Operators, Conditional Operators, Precedence of Arithmetic Operators. Decision Making, Branching, Looping: Introduction, Decision Making with IF Statement, Simple IF Statement, The IF..ELSE Statement, Nesting of IF..ELSE Statements, The ELSE IF Ladder, The Switch Statement, The ?: Operator, The GOTO Statement, WHILE, DO, FOR, Jumps in LOOPS. Textbook: Chapter 4.1 to 4.7, 4.12, Chapter 6.1 to 6.9, Chapter 7.1 to 7.5	8
Module 3	Hours
Arrays and Strings: Introduction, Declaration and Initialization of One-dimensional and Two-Dimensional Arrays, Declaring and Initializing String Variables, Example programs using arrays, Reading Strings from Terminal, Writing Strings to Screen, Arithmetic Operations on Characters, Comparison of Two Strings, String-handling Functions.	8

Textbook: Chapter 8.1 to 8.6, Chapter 9.2 to 9.5, 9.7, 9.8	
Module 4	Hours
User-defined Functions: Introduction, Need for User-defined Functions, A Multi-functional Program, Elements of User-defined Functions, Definition of Function, Return Values and their Types, Function Calls, Function Declaration, No Arguments and no Return Values, Arguments but no Return Values, Nesting of Functions. Textbook: Chapter 10.1 - 10.14	8
Module 5	Hours
Structures and Pointers: Introduction, defining a Structure, Declaring and Accessing Structure Variables and Members, Structure Initialization, Copying and Comparing Structure Variables, Array of Structures, Arrays of Structures. Pointers: Introduction, Understanding Pointers, Accessing the Address of Variable, declaring pointer variables, initialization of pointers, accessing variables through its pointer. Textbook: Chapter 11.1 to 11.6, 11.8, 11.9, Chapter 12.1 to 12.6	8

Lab Component			
Exercise	Experiment	Course Outcomes	RBT Level
1	Develop a program to calculate the temperature converter from degree to Fahrenheit.	CO1	3
2	Develop a program to find the roots of quadratic equations.	CO2	3
3	Develop a program to find whether a given number is prime or not.	CO2	3
4	Develop a program to find key elements in an array using linear search.	CO3	3
5	Given age and gender of a person, develop a program to categorize senior citizen (male & female).	CO3	3
6	Generate Floyd's triangle for given rows.	CO2	3
7	Develop a program to find the transpose of a matrix.	CO3	3
8	Develop a program to concatenate two strings, find length of a string and copy one string to other using string operations.	CO3	3
9	Develop a modular program to find GCD and LCM of given numbers.	CO4	3
10	Develop a program to declare the structure of employees and display the employee records with higher salary among two employees.	CO5	3
11	Develop a program to add two numbers using the pointers to the variables.	CO5	3
12	Develop a program to find the sum of digits of a given number.	CO4	3
13	Develop a program to perform Matrix Multiplication.	CO3	3
14	Develop a program to create an array of structures to store book details and check whether a specific book, as requested by the user, is available or not.	CO3	3

8. Text Book:

1. Course Description

This course aims to develop essential verbal, non-verbal, and written communication skills required for academic, professional, and digital contexts. It focuses on enhancing interpersonal skills, presentation abilities, and workplace communication, while integrating employability skills such as email writing, group discussions, and interviews. Through interactive and experiential learning approaches, the course prepares learners to communicate effectively with clarity, confidence, and professionalism.

2. Pre-requisites:

Students should possess a basic understanding of the English language, including reading, writing, and simple sentence formation. They are expected to demonstrate a willingness to participate in interactive activities such as discussions, presentations, and role plays, along with openness to feedback and continuous improvement. Basic listening skills and the ability to follow instructions are essential. No prior formal training in communication skills is required, making the course suitable for beginner to intermediate learners.

3. Course Objectives

- To develop **effective verbal and non-verbal communication skills** for clarity and professional interaction
- To enhance **interpersonal and presentation skills** for group discussions, debates, and workplace communication
- To build competence in **formal and informal writing**, including emails, reports, and creative content
- To enable learners to communicate effectively in **digital platforms**, following netiquette and ethical practices
- To prepare students for **career readiness**, including resume writing, job applications, and interview performance

4. Wks covered through this course – WK8, WK9

5. Course Outcomes: By the end of the course students will be able to

Course Outcome	Description	Mapped POs/PSOs	Cognitive Level
C106.1/ C206.1	Build essential verbal, non-verbal, and phonetic communication skills and apply interpersonal skills for clarity, confidence, and effective professional interaction.	PO9	L3

C106.2/ C206.2	Apply formal writing, email etiquette, creative content development, and digital communication practices with appropriate netiquette and academic integrity.	PO9	L3
C106.3/ C206.3	Develop employability -oriented communication skills through professional writing, résumé preparation, job applications, presentations, and interviews.	PO9	L3
C106.4/ C206.4	Demonstrate effective communication, collaboration, and professional interaction skills in group discussions, presentations, workplace situations, and digital environments.	PO9	L3

6. CO-PO articulation matrix

CO/PO	PO 1	PO 2	PO 3	PO 4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
C106.1/C206.1									1		
C106.2/C206.2									1		
C106.3/C206.3									1		
C106.4/C206.4									1		

7. Modular Topics

Module 1	Hours
Glimpses of Essential English for Engineers (General Over view), Communication Skills: Process, Verbal and Non-Verbal, Proxemics, Chronemics and Barriers. Writing: Word Classification–Parts of Speech, Sentence structures. Speaking & Listening: Listening to English Pronunciation–English Phonemes–Intelligible Accent – Speech Organs- Syllable Structures, Stress, Intonation, and Practice.	03
Module 2	Hours
Speaking: Role Play Exercises Based on Workplace Contexts, Introducing Oneself - PEP Talks- Personal Empowerment, Participating in Group Discussion and Debates, Giving Technical Presentation. Reading: Reading the Interview of an Achiever (Skimming and Scanning) (Case Studies). Writing: Writing a Short Biography of an Achiever Based on given reflections. Grammar: Sentence patterns. Vocabulary Development: Idioms and Phrases.	03
Module 3	Hours

Writing: Form a l Letter writing (Enquiry, Order, and Complaint). Tenses–Reported Speech-Voice - Email Etiquettes, Structure, Writing and Responding to Emails. Paragraph Writing (Descriptive, Argumentative, Expository, Short Story, and Narrative), Blog Writing. Reading: Proof Reading (Spelling, Punctuation, Grammar). Error Identification Exercises. Speaking: Questions & Requests (non-Wh questions and Question tags).	03
Module 4	Hours
Writing: Framing of search terms / keywords in search engines/ Commands for search on open AIs - Tools to support synchronous communication such as webinar platforms, and asynchronous communication such as forums and social media - Online communication - Types – pros and cons of online communication. Acceptable online roles and behaviors – Netiquettes - Etiquettes of social media. Problems and opportunities in handling digital resources -Tools to check grammar. Writing: Citing information accurately from source material - Plagiarism – Infringement, Importance of academic integrity.	03
Module 5	Hours
Writing: Framing of search terms / keywords in search engines/ Commands for search on open AIs - Tools to support synchronous communication such as webinar platforms, and asynchronous communication such as forums and social media - Online communication - Types – pros and cons of online communication. Acceptable online roles and behaviors – Netiquettes - Etiquettes of social media. Problems and opportunities in handling digital resources -Tools to check grammar. Writing: Citing information accurately from source material - Plagiarism – Infringement, Importance of academic integrity.	03

1. Course Description

This course is designed to develop essential soft skills required for personal and professional success. It focuses on enhancing self-awareness, communication, stress management, goal setting, and problem-solving abilities, while also nurturing empathy, teamwork, critical thinking, and conflict resolution skills. Through experiential and activity-based learning, the course prepares learners to adapt, collaborate, and perform effectively in real-world and workplace environments.

2. Prerequisites:

Students should possess basic communication abilities and a willingness to engage in interactive learning activities such as discussions, role plays, and presentations. They are expected to be open to self-reflection, enabling them to identify and improve their strengths and weaknesses. A positive attitude towards personal growth, stress management, and teamwork is essential. No prior formal training in soft skills is required.

3. Course Objectives

- Apply social skills for clear communication, persuasion, self-awareness, and active listening.
- Use emotional skills to build confidence, manage stress, and adapt to change.
- Set ambitious goals, practice empathy, and apply creativity for problem-solving.
- Demonstrate discipline, time management, and structured problem-solving.
- Work in teams, negotiate, resolve conflicts and think critically.

4. WKs covered through this course – WK8, WK9

5. Course Outcomes

After completing the course, Students would be able to:

<i>Course Outcome</i>	<i>Description</i>	<i>Mapped POs/PSOs</i>	<i>Blooms Taxonomy Level</i>
<i>C106.1/C206.1</i>	Apply principles of effective communication, persuasion, self-awareness, active listening, and emotional intelligence to interact effectively in professional and social contexts.	PO9	L1
<i>C106.2/C206.2</i>	Develop goal-setting abilities, empathy, creativity, adaptability, and resilience to enhance personal growth, interpersonal effectiveness, and problem-solving.	PO9	L1
<i>C106.3/C206.3</i>	Apply problem-solving techniques, discipline, time management, and academic integrity practices to manage structured academic and professional tasks effectively.	PO9	L1
<i>C106.4/C206.4</i>	Apply collaboration, teamwork, negotiation, conflict resolution, and critical thinking skills to address workplace and real-life situations effectively.	PO9	L1

6. CO-PO articulation matrix

[illegible]

7. Modular Topics

Module 1	Hours
Communication: Principles of clear and effective exchange of ideas in professional and social contexts. Persuasion: Techniques to influence and convince through logical, emotional and ethical appeals. Self-Awareness: Identifying personal strengths, weaknesses, opportunities and challenges (SWOC analysis). Active Listening: Paraphrasing, questioning techniques and demonstrating attentiveness.	03
Module 2	
Emotional Intelligence (EI): Recognizing and managing emotions, empathy, relationship management, and conflict resolution. Stress Management: Identifying stress triggers, relaxation techniques, work-life balance strategies, and mindfulness practices. Time Management: Prioritization (Eisenhower Matrix), setting SMART goals, avoiding procrastination, and effective scheduling. Adaptability & Resilience: Handling change, bouncing back from setbacks and developing a growth mindset.	03
Module 3	
Ambition & Goal Setting: Defining personal and professional aspirations, creating SMART goals, and aligning actions with long-term vision. Sympathy & Empathy: Understanding emotional perspectives, differentiating between the two, and applying them in workplace and social interactions. Creativity & Innovation: Generating original ideas, problem-solving, and applying creative thinking techniques (mind-mapping, SCAMPER).	03
Module 4	
Problem Solving: Identifying root causes, analyzing options, and implementing solutions using methods like 5 Whys and Fishbone Diagram. Discipline: Building consistency, accountability, and professional habits. Time Management: Prioritizing tasks (Eisenhower Matrix), scheduling, avoiding procrastination. Writing: Citing information accurately from source material - Plagiarism Infringement, Importance of academic integrity.	03
Module 5	
Collaboration & Team work: Working effectively in diverse teams, fostering trust and achieving shared goals. Negotiation & Conflict Resolution: Strategies to solve differences and reach win-win outcomes. Critical Thinking: The ability to analyze, evaluate, and synthesize information to make well-reasoned decisions.	03

DEPARTMENT OF ELECTRONICS & COMMUNICATION ENGINEERING

Course	Fundamentals of Electronics & Communication Engineering Lab		
Course Code	BECCEL26107/207		
Course Category	PSC		
Hours/Week (L: T: P)	0:0:2	No. of Credits	1
Self-Study hours/semester			
CIE Marks	50	SEE Marks	50

1. Course Description:

This laboratory course helps students understand the practical behavior of analog and digital electronic circuits beyond theoretical concepts. It enables them to analyze and design rectifiers, transistor circuits, and op-amp based systems while evaluating key performance parameters such as efficiency and waveform characteristics. Students also gain hands-on experience in implementing digital logic circuits and verifying their operation. Overall, the lab develops essential skills in circuit design, testing, and interpretation required for real-world electronic engineering applications.

2. Prerequisites:

Physics, Mathematics and Basic electronics fundamentals.

3. Course Objectives:

- To understand and analyze the operation of rectifier circuits and evaluate their performance parameters such as ripple factor, efficiency, and voltage regulation.
- To study the characteristics and applications of semiconductor devices like BJT and operational amplifiers in analog circuits.
- To design and analyze basic op-amp configurations including amplifiers, integrators, differentiators, and waveform processing circuits.
- To implement and verify fundamental digital logic circuits and combinational logic designs using basic and universal gates.

4. Wks covered through this course : WK1, WK2, WK3, WK4, WK5

5. Course Outcomes: By the end of the course students will be able to,

Course Outcome	Description	Mapped POs/PSOs	Blooms Taxonomy Level
C107.1/C207.1	Analyze rectifier circuits and evaluate ripple factor, efficiency, and voltage regulation with and without filters.	PO1, PO2, PO3, PO4	L3
C107.2/C207.2	Examine input-output characteristics of BJT and analyze op-amp configurations for desired performance.	PO1, PO2, PO3, PO4	L3

C107.3/C207.3	Design and test op-amp based circuits such as amplifiers, integrators, differentiators, and waveform shaping circuits.	PO1, PO2, PO3, PO4	L3
C107.4/C207.4	Implement and verify digital logic circuits and combinational circuits using logic gates.	PO1, PO2, PO3, PO4	L3

6. CO-PO Articulation Matrix

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
C107.1/C207.1	3	3	2	3	-	-	-	-	-	-	-
C107.2/C207.2	3	3	2	3	-	-	-	-	-	-	-
C107.3/C207.3	3	2	3	3	-	-	-	-	-	-	-
C107.4/C207.4	3	2	3	2	-	-	-	-	-	-	-

7. Lab Component

Exercise	Experiment	Course Outcomes	RBT Level
1	Design and Testing of Half-Wave and Full-Wave Rectifiers with and Without Filter for Determining Ripple Factor, Voltage Regulation, and Efficiency.	CO1	L3
2	Design and Testing of Bridge Rectifier with and Without Filter for Determining Ripple Factor, Voltage Regulation, and Efficiency.	CO1	L3
3	Analysis of Input and Output Characteristics of a Bipolar Junction Transistor in Common Emitter Configuration.	CO2	L3
4	Investigation of Op-Amp in Inverting and Non-Inverting Modes with Gain Measurement.	CO2	L3
5	Testing of Op-Amp as voltage follower and a weighted summer with waveform analysis.	CO3	L3
6	Design and Testing of Integrator and Differentiator Circuits using Op-Amp with Waveform Analysis.	CO3	L3
7	Study of Truth Tables for OR, AND, NOT, NAND, and NOR Gates Using Basic and Universal Gates.	CO4	L3
8	Realization of Half Adder using Logic Gates.	CO4	L3

DEPARTMENT OF ELECTRICAL & ELECTRONICS ENGINEERING

Course	Basic Electrical Lab		
Course Code	BBEEL26107/207		
Course Category	PSCL		
Hours/Week (L: T: P)	0:0:2	No. of Credits	1
Self-Study hours/semester	-		
CIE Marks	50	SEE Marks	50

- 1. Course Description:** The Basic Electrical Engineering Laboratory provides hands-on experience with fundamental electrical circuits, measurement techniques, and basic electrical systems. Students perform experiments to verify core circuit principles such as Kirchhoff's Current Law and Kirchhoff's Voltage Law, analyze the relationship between line and phase quantities in three-phase circuits, and study the operation of electrical components including RLC circuits, choke coils, transformers, and protection devices. The laboratory also introduces renewable energy concepts through performance analysis of solar cells based on the Photovoltaic Effect. In addition, students gain exposure to basic embedded hardware development by interfacing sensors and implementing simple automation systems using microcontroller platforms such as Arduino Uno. The course emphasizes practical skills, experimental analysis, and project-based learning through the design and implementation of a simple electrical hardware prototype.
- 2. Prerequisites:** -
Basic Electrical Engineering fundamentals, including electrical quantities, circuit elements, and electrical safety.
- 3. Course Objectives:**
 - Provide practical exposure to fundamental electrical circuit laws and enable students to experimentally verify principles such as Kirchhoff's Current Law and Kirchhoff's Voltage Law in DC circuits.
 - To familiarize students with basic electrical wiring and control circuits, including the design and verification of simple switching circuits, fuse and circuit breakers.
 - Determine the relationship between phase and line quantities in three-phase star and delta connected loads and measure three-phase power using the two-wattmeter method.
 - Understand the Performance of a single-phase transformer and demonstration of fuse and MCB.
 - Encourage hands-on learning and hardware prototyping through sensor interfacing and simple automation using microcontroller platforms such as Arduino Uno.

4. Wks covered through this course – Any from WK1 to WK6

5. Course Outcomes: *By the end of the course students will be able to,*

Course Outcome	Description	Mapped POs/PSOs	Blooms Taxonomy Level
C107.1/C207.1	Apply electrical laws and analyze basic electrical circuits through experiments.	PO1 PO7, PO8, PO9,	L3
C107.2/C207.2	Analyze electrical parameters through appropriate laboratory techniques.	PO1 PO7, PO8, PO9,	L4
C107.3/C207.3	Analyze the performance of transformers, protection devices, and PV systems through suitable experiments.	PO1 PO7, PO8, PO9	L4
C107.4/C207.4	Analyze the application of hardware, sensors, and control techniques in engineering applications.	PO1, PO4, PO7, PO8, PO9,	L4

6. CO-PO Articulation Matrix

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11

10. Evaluation Methodology

- Continuous Internal Evaluation (CIE) = 50 marks
 - Semester End Examination (SEE) = 50 marks
- Total = 100 marks

DEPARTMENT OF SCIENCE & HUMANITIES

Course	Indian Constitution and Engineering Ethics		
Course Code	BICO26107/207		
Course Category	AEC (NCMC)		
Hours/Week (L: T: P)	1:0:0	No. of Credits	PP
Self-Study hours/semester	20		
CIE Marks	100	SEE Marks	-

1. Course Description:

Students gain knowledge about the struggles faced by national leaders in achieving freedom and drafting the Constitution; the significance of Fundamental Rights and Duties of Indian citizens; the functioning of the Union and State Governments; the electoral process; constitutional values; and the principles of professional and engineering ethics.

2. Prerequisites:

Students are expected to have a basic awareness of the Indian Constitution, democratic governance, Fundamental Rights and Duties, the Preamble, constitutional values, and the structure and functioning of the Union and State Governments, as acquired through school education.

3. Course Objectives:

- Understand the necessity, making, salient features, Preamble, and the role of the Constituent Assembly in the Indian Constitution.
- Explain the Fundamental Rights (FRs), Directive Principles of State Policy (DPSPs), and Fundamental Duties (FDs) and their significance in society.
- Understand the structure and functioning of the Union Executive, Parliament, and the role of the Supreme Court, judicial review, and judicial activism.
- Understand the State Executive, Election Commission, electoral process, constitutional amendments, and emergency provisions of the Indian Constitution.
- Explain the principles of professional and engineering ethics, ethical responsibilities, Intellectual Property Rights (IPRs), safety, reliability, and ethical decision-making in engineering practice.

4. Wks covered through this course –WK1, WK4 and WK7

5. Course Outcomes:

Course Outcome	Description	Mapped POs/PSOs	Blooms Taxonomy Level
C107.1/ C207.1	Explain the necessity, making, Preamble, and salient features of the Indian Constitution.	PO6	L2
C107.2/ C207.2	Distinguish between the Fundamental Rights, Directive Principles of State	PO6	L2

	Policy (DPSPs), and Fundamental Duties (FDs), and interpret their significance in society.		
C107.3/ C207.3	Understand the structure and functioning of the Union and State Governments, Parliament, Judiciary, electoral process, constitutional amendments, and emergency provisions.	PO6	L2
C107.4/ C207.4	Discuss the principles of professional and engineering ethics, Intellectual Property Rights (IPRs), safety, and ethical responsibilities.	PO6	L2

6.CO-PO Articulation Matrix

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
C107.1/C207.1	-	-	-	-	-	1	-	-	-	-	-
C107.2/C207.2	-	-	-	-	-	1	-	-	-	-	-
C107.3/C207.3	-	-	-	-	-	1	-	-	-	-	-
C107.4/C207.4	-	-	-	-	-	1	-	-	-	-	-

7. Modular Topics

Module 1	Hours
Introduction to Indian Constitution: The Necessity of the Constitution, The Societies before and after the adoption of the Constitution. Introduction to the Indian constitution, The Making of the Constitution, The Role of the Constituent Assembly. The Preamble of Indian Constitution & Key concepts of the Preamble. Salient features of India Constitution.	3
Module 2	Hours
FR's, FD's and DPSP's: Fundamental Rights and its Restriction and limitations in different Complex Situations. Directive Principles of State Policy (DPSP) and its present relevance in our society with examples. Fundamental Duties and its Scope and significance in Nation building.	3
Module 3	Hours
Union Executive: Parliamentary System, Union Executive – President, Prime Minister, Union Cabinet, Parliament - LS and RS, Important Parliamentary Terminologies, Court of India.	3
Module 4	Hours
State Executive & Elections, Amendments and Emergency Provisions: State Executive, Election Commission, Elections & Electoral Process. Amendment to Constitution (How and Why) and Important Constitutional Amendments till today. Emergency Provisions.	3
Module 5	Hours

Professional Ethics: Ethics and Values. Types of Ethics. Scope and Aims of Professional and Engineering Ethics. Positive and Negative Aspects of Engineering Ethics. Clash of Ethics and Conflicts of Interest. Impediments to Responsibility. Trust and Reliability in Engineering. Intellectual Property Rights (IPRs). Risks, Safety, and Liability in Engineering.

INNOVATION & DESIGN THINKING LAB

Course	Innovation & Design Thinking Lab		
Course Code	BIDTL26108		
Course Category	AEC/SDC		
Hours/Week (L:T:P)	0:0:2	No. Of Credits	01
Self-Study hours/Semester	15		
CIE Marks	50	SEE Marks	50

1. Course Description:

The **Innovation & Design Thinking Lab (IDTL)** is a multidisciplinary, project-based course that introduces students to the principles of design thinking, innovation, and human-centered problem solving. The course enables students to identify real-world societal and community challenges through empathy, observation, and stakeholder engagement. Students work collaboratively in multidisciplinary teams to generate creative ideas, develop prototypes, evaluate solutions, and refine them based on user feedback. The course also promotes sustainability, entrepreneurship, ethical practices, and effective teamwork, fostering an innovation-driven mindset required for solving contemporary engineering and societal problems.

2. Prerequisites:

The course presumes prior exposure to higher secondary-level Science and Mathematics, enabling students to understand fundamental scientific concepts, willingness to engage in creative thinking, teamwork, and experiential learning, interest in innovation, problem solving, and societal challenges. Knowledge of basic scientific practices and graphical data representation is advantageous. Such foundational preparation supports the achievement of course outcomes related to analytical thinking, application of scientific principles to solve real world problems for societal benefits.

3. Course Objectives:

- Develop empathy towards users by identifying and understanding real-world societal and community problems through observation and stakeholder interaction.
- Apply design thinking principles to define problems, generate innovative ideas, and develop user-centric and sustainable engineering solutions.
- Promote multidisciplinary collaboration by working effectively in diverse teams to design, prototype, and refine innovative products or processes.
- Foster creativity, entrepreneurship, and responsible innovation by evaluating solutions considering societal impact, sustainability, ethics, and feasibility.

4. Wks covered through this course – WK2, WK3, WK5, WK6, WK7, WK8

5. Course Outcomes: By the end of the course students will be able to

Course Outcome	Description	Mapped POs/PSOs	Blooms Taxonomy Level
C108.1	Identify and analyze societal or community problems through empathy, stakeholder interaction, and problem definition using design thinking methodologies.	PO1, PO2, PO6	L1, L2, L3
C108.2	Generate innovative, sustainable, and user-centric solutions by applying design thinking principles and multidisciplinary collaboration.	PO2, PO3, PO7, PO9	L1, L2, L3
C108.3	Develop, test, and refine prototypes using appropriate tools and technologies available in the Innovation/Makers Lab based on user feedback.	PO1, PO3, PO7, PO9	L1, L2, L3
C108.4	Present and justify innovative solutions through effective communication, teamwork, and social entrepreneurship considering sustainability and scalability.	PO7, PO8, PO9, PO11	L1, L2

6. CO-PO Articulation Matrix

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
C108.1	2	3	-	-	-	2	-	-	-	-	-
C108.2		2	3	-		-	2	-	3	-	-
C108.3	1		2	-		-	2	-	2	-	-
C108.4		-	-	-		-	2	2	2	-	3

7.Modular Topics

Week 1-3: Orientation and Team Formation

Week -1&2: Introduction to Social Entrepreneurship, Innovation and Design Thinking Group discussion on What is Innovation vs Invention. Why Design Thinking is important. Brief about 5 stages: Empathize – Define – Ideate – Prototype – Test. Week -3: Innovation warm-up activities, forming interdisciplinary teams, Instructions about Next week activities

Week 4–6: Empathy and Field Exploration

Week-4-6: Field (any public places of student's interest Eg- Village, Government Office, Industry. R&D institute, NGO etc) visits, stakeholder interviews and interaction. Recording all interaction through handwritten in activity book prescribed by the University.

Week 7-9: Problem Definition

Week-7: Documentation, categorization and Group discussion on interactions and problems/challenges. Week-8&9: Problem framing using “How Might We” approach, Identification of social problems and user insights through affinity Clustering and Problem Tree. Mention of clearly defined challenge statements.

Week 10-13: Ideation Sprint

Week- 10: Brainstorming interactions and Mind Mapping. Development of Ideas, Week- 11: Idea Filtering - Shortlist of creative, eco -friendly and feasible ideas. Selection of one Suitable IDEA for next process, Week 12-13: Designing/Structuring of Prototype model

Week 14-15: Final Presentation/Idea Pitch

Week14-15: Preparation of final prototype/model, documentation and presentation. Final team presentation and idea pitch before the evaluation panel.

8. Evaluation Methodology:

The assessment in each course is divided equally between Continuous Internal Evaluation (CIE) and the Semester End Examination (SEE), with each carrying 50% weightage.

To qualify and become eligible to appear for SEE, in the CIE, a student must score at least 40% of 50 marks, i.e., 20 marks.

To pass the SEE, a student must score at least 35% of 50 marks, i.e., 18 marks.

Notwithstanding the above, a student is considered to have passed the course, provided the combined total of CIE and SEE is at least 40 out of 100 marks

Evaluation Structure

Assessment	Actual Weightage in Marks	Final weightage in Marks
CIE1	50	Avg. of 2 CIEs
CIE2	50	
SEE	100	50
TOTAL		100
Grading consideration		50% CIE + 50% SEE

INTERDISCIPLINARY PROJECT BASED LEARNING

Course	Interdisciplinary Project Based Learning		
Course Code	BPRJ26208		
Course Category	AEC/SDC		
Hours/Week (L: T:P:S)	0:0:0:2	No. Of Credits	01
Self-Study hours/Semester	15		
CIE Marks	50	SEE Marks	50

1. Course Description:

The Interdisciplinary Project Work provides students with experiential learning opportunities through multidisciplinary projects addressing engineering, industrial, or societal challenges. Students identify problems, conduct background studies, design innovative solutions, develop and validate prototypes, and communicate project outcomes while working collaboratively in teams. The course emphasizes critical thinking, engineering design, sustainability, ethical practices, project management, and lifelong learning. It encourages the integration of knowledge from multiple disciplines to develop practical and socially relevant engineering solutions.

2. Prerequisites:

Basic knowledge of science, mathematics, and engineering fundamentals acquired during the first semester. Ability to work collaboratively in multidisciplinary teams. Interest in applying engineering concepts to solve real-world problems through project-based learning.

3. Course Objectives:

- Apply fundamental engineering knowledge to identify and formulate interdisciplinary problems of societal and industrial relevance.
- Design and develop innovative solutions through systematic project planning, teamwork, and application of engineering principles.
- Develop problem-solving, critical thinking, and project execution skills by implementing, testing, and validating engineering solutions.
- Enhance professional competencies including teamwork, project management, ethical practices, sustainability, and lifelong learning through project-based experiences.

4. Wks covered through this course –WK2, WK3, WK4, WK5, WK6, WK8

5. Course Outcomes:

Course Outcome	Description	Mapped POs/PSOs	Blooms Taxonomy Level
C208.1	Identify and analyze interdisciplinary engineering problems	PO1, PO2	L1, L2, L3
C208.2	Design innovative, sustainable and interdisciplinary solutions	PO2, PO3, PO7, PO9	L1, L2, L3
C208.3	Develop, integrate, test and validate prototypes	PO1, PO3, PO7, PO9	L1, L2, L3
C208.4	Demonstrate project management, documentation and professional practices	PO8, PO9, PO11	L1, L2

6. CO-PO Articulation Matrix

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
C208.1	2	3	-	-	-	-	-	-	-	-	-
C208.2	-	2	3	-	-	-	2	-	2	-	-
C208.3	1	-	2	-	-	-	1	-	3	-	-
C208.4	-	-	-	-	-	-	-	2	2	-	2

7. Modular Topics

Week - 1, 2 & 3: Introduction, Orientation, Team Formation and Literature Survey
Week -1&2: Introduction to interdisciplinary project-based learning, project examples and real-world applications. Team formation of 4–6 students and selection of broad theme areas. Problem identification/refinement using Mind Mapping, 5W1H and SCAMPER. Week 3: Literature survey through journals, patents, projects and case studies. Identification of user needs, existing solutions, limitations and interdisciplinary requirements.
Week- 4, 5 and 6: Problem Definition and Solution Ideation
Week-4&5: Refinement of problem statement, scope, constraints, objectives and expected outcomes. Generation of multiple solution concepts and evaluation of technical, economic, social and environmental feasibility. Week-6: Selection of the best concept using a decision matrix. Preparation of preliminary sketches, block diagrams/flowcharts and resource plan.
Week -7, 8 and 9: Project Planning and Prototype Development – Stage 1
Week-7: Work breakdown structure (task division). Timeline for development. Safety & ethical considerations. task allocation and subsystem design. Week-8&9: Development of individual subsystems/modules using relevant engineering knowledge, Initial testing and mentor/peer reviews.
Week 10,11&12: Integration, Prototyping stage 2 and Testing

Week-10: Integration of subsystems. Debugging & troubleshooting. Iterative Improvement. Week-11&12: Testing against project objectives & user requirements. Analysis and documentation of results, failures and limitations.

Week 13 & 14: Refinement & Pre-Final Review

Week-13&14: Refining prototype for performance, cost, usability and sustainability. Mentor/Peer review and incorporation of feedback. Preparation of final report, poster, presentation and demonstration materials.

Week 15: Final Demo and Social Pitch

Presentation of problem, solution, interdisciplinary contribution, results, impact, sustainability and future scope. Project pitching highlighting innovation, feasibility and societal/industrial relevance.

8. Evaluation Methodology:

- a) Continuous Internal Evaluation (CIE) = 50 marks
- b) Semester End Examination (SEE) = 50 marks
- c) Total = 100 marks

DEPARTMENT OF SCIENCE AND HUMANITIES

Course	ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡ (SAMSKRUTIKA KANNADA)		
Course Code	BKSK26109/209		
Course Category	HSMC		
Hours/Week (L: T: P)	1:0:0	No. of Credits	01
Self-Study hours/semester	30		
CIE Marks	50	SEE Marks	50

1. Course Description:

ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡ ಪಠ್ಯವು ವಿದ್ಯಾರ್ಥಿಗಳಿಗೆ ಕನ್ನಡ ಭಾಷೆ, ಸಾಹಿತ್ಯ, ಸಂಸ್ಕೃತಿ ಹಾಗೂ ಕರ್ನಾಟಕದ ಸಾಂಸ್ಕೃತಿಕ ಪರಂಪರೆಯ ಬಗ್ಗೆ ಸಮಗ್ರ ಅರಿವು ಮೂಡಿಸುವ ಉದ್ದೇಶವನ್ನು ಹೊಂದಿದೆ. ಪಠ್ಯವು ಕನ್ನಡ ಸಾಹಿತ್ಯದ ಪ್ರಮುಖ ಕೃತಿಗಳು, ಲೇಖಕರು, ಕವಿಗಳು ಹಾಗೂ ಜಾನಪದ ಪರಂಪರೆಯನ್ನು ಪರಿಚಯಿಸುವ ಮೂಲಕ ಭಾಷಾಕೌಶಲ್ಯ, ಸಂವಹನ ಸಾಮರ್ಥ್ಯ, ನೈತಿಕ ಮೌಲ್ಯಗಳು ಮತ್ತು ಸಾಮಾಜಿಕ ಹೊಣೆಗಾರಿಕೆಯನ್ನು ಬೆಳೆಸುತ್ತದೆ. ವಿದ್ಯಾರ್ಥಿಗಳಲ್ಲಿ ಕನ್ನಡ ಭಾಷೆಯ ಬಗ್ಗೆ ಗೌರವ, ಸಾಂಸ್ಕೃತಿಕ ಅರಿವು ಮತ್ತು ಜೀವಮಾನವಿಡೀ ಕಲಿಕೆಯ ಮನೋಭಾವವನ್ನು ಬೆಳೆಸುವಂತೆ ರೂಪಿಸಲಾಗಿದೆ.

2. Prerequisites:

- ವಿದ್ಯಾರ್ಥಿಯು ಕನ್ನಡ ಭಾಷೆಯ ಮೂಲಭೂತ ಓದು, ಬರವಣಿಗೆ ಮತ್ತು ಗ್ರಹಿಕೆ ಕೌಶಲ್ಯವನ್ನು ಹೊಂದಿರಬೇಕು.
- ಕರ್ನಾಟಕದ ಸಂಸ್ಕೃತಿ, ಇತಿಹಾಸ ಹಾಗೂ ಸಾಹಿತ್ಯದ ಬಗ್ಗೆ ಮೂಲಭೂತ ಅರಿವು ಇದ್ದರೆ ಪಠ್ಯವನ್ನು ಸುಲಭವಾಗಿ ಅರ್ಥಮಾಡಿಕೊಳ್ಳಬಹುದು.
- ಎಸ್.ಎಸ್. ಎಲ್. ಸಿ.ಪಿ.ಯು.ಸಿ ಹಂತದಲ್ಲಿ ಕನ್ನಡವನ್ನು ಅಭ್ಯಾಸ ಮಾಡಿರುವುದು ಅಪೇಕ್ಷಣೀಯ, ಏಕೆಂದರೆ ಈ ಪಠ್ಯವು ಕನ್ನಡವನ್ನು ಪೂರ್ವದಲ್ಲಿ ಕಲಿತ ವಿದ್ಯಾರ್ಥಿಗಳಿಗಾಗಿ ರೂಪಿಸಲಾಗಿದೆ.

3. Course Objectives:

- ವೃತ್ತಿಪರ ಪದವಿ ವಿದ್ಯಾರ್ಥಿಗಳಾಗಿರುವುದರಿಂದ ಕನ್ನಡ ಭಾಷೆ, ಸಾಹಿತ್ಯ ಮತ್ತು ಕನ್ನಡದ ಸಂಸ್ಕೃತಿಯ ಪರಿಚಯ ಮಾಡಿಕೊಡುವುದು.
- ಕನ್ನಡ ಸಾಹಿತ್ಯದ ಪ್ರಧಾನ ಭಾಗವಾದ ಆಧುನಿಕ ಪೂರ್ವ ಮತ್ತು ಆಧುನಿಕ ಕಾವ್ಯಗಳನ್ನು ಸಾಂಕೇತಿಕವಾಗಿ ಪರಿಚಯಿಸುವುದು.
- ವಿದ್ಯಾರ್ಥಿಗಳಲ್ಲಿ ಸಾಹಿತ್ಯ ಮತ್ತು ಸಂಸ್ಕೃತಿಯ ಬಗ್ಗೆ ಅರಿವು ಹಾಗೂ ಆಸಕ್ತಿಯನ್ನು ಮೂಡಿಸುವುದು.
- ತಾಂತ್ರಿಕ ವ್ಯಕ್ತಿಗಳ ಪರಿಚಯವನ್ನು ಹಾಗೂ ಅವರುಗಳು ಸಾಧಿಸಿದ ವಿಷಯಗಳನ್ನು ಪರಿಚಯಿಸುವುದು.
- ಸಾಂಸ್ಕೃತಿಕ, ಜನಪದ ಹಾಗೂ ಪ್ರವಾಸ ಕಥನಗಳ ಪರಿಚಯ ಮಾಡಿಕೊಡುವುದು.

4. Course Outcomes: By the end of the course students will be able to,
