Semester I

Course: Linear Algebra and Calculus

Course Code	22MAT11	CIE Marks	50
Hours/Week (L: T: P)	3:2:0	SEE Marks	50
No. of Credits	4	Examination Hours	03

Course Objectives

To enable students to apply the knowledge of Mathematics in various fields of engineering by making them to learn the following:

CLO1	Solution of system of equations and Eigen values
CLO2	Polar curves, Curvature and Radius of curvature
CLO3	Partial derivatives and Jacobians
CLO4	Vector differentiation

Content	No. of Hours/ RBT levels
Module 1 Rank of a matrix by elementary row transformations. Eigen values and Eigen vectors. Consistency of linear system of equations. Solution of linear system of equations: Gauss elimination, Gauss Jordan and Gauss-Seidel methods.	10 Hours L2, L3
Module 2 Successive Differentiation; standard results. Fundamental Theorems: Rolle's theorem, Lagrange mean value theorem, Cauchy's mean value theorem and Taylor's theorem. Expansion of functions: Maclaurin's series.	10 Hours L2, L3
Module 3 Evaluation of indeterminate forms. Polar Curves: Angle between radius vector and tangent, angle between two curves. Pedal equation. Curvature and Radius of Curvature for Cartesian and polar curves.	10 Hours L2, L3
Module 4 Function of two or more variables, Partial derivatives, Differentiation of composite functions. Jacobians (direct examples). Taylor's theorem for functions of two variables. Maxima and Minima of functions of two variables.	10 Hours L2, L3
Module 5 Differentiation of vectors, velocity and acceleration. Scalar and vector point functions. Gradient, directional derivative; divergence and curl, physical interpretation of divergence and curl.	10 Hours L2, L3

Course Outcomes

Upon completion of this course, student will be able to:

CO11.1	Apply knowledge of matrices to test the consistency and solve system of linear equations.
CO11.2	Demonstrate the understanding of fundamental theorems of calculus.
CO11.3	Solve problems related to curvature, maxima & minima and Jacobians.
CO11.4	Compute Gradient, Divergence and Curl of a scalar/vector field.

3. A Text Book of Engineering Mathematics, N.P. Bali and Manish Goyal, Laxmi Publications, 6th Edition, 2014.
4. Calculus, James Stewart, Cengage Publication, 7th Edition, 2012.

Scheme of Examination:**Semester End Examination (SEE):**

SEE Question paper is to be set for 100 marks and the marks scored will be proportionately reduced to 50. There will be two full questions (with a maximum of three sub questions) from each module carrying 20 marks each. Students are required to answer any **five full questions** choosing at least **one full question from each module.**

Continuous Internal Evaluation (CIE):

Three Tests are to be conducted for 40 marks each. Average of Marks scored in all three tests is added to test component. CIE is executed by way of quizzes / Alternate Assessment Tools (AATs), and three tests. **Some possible AATs:** seminar/assignments/ mini-projects/ concept videos/ partial reproduction of research work/ group activity/ any other.

Typical Evaluation pattern for regular courses is shown in Table 2.

Table 2: Distribution of weightage for CIE & SEE of Regular courses

Component		Marks	Total Marks
CIE	CIE Test-1	40	50
	CIE Test-2	40	
	CIE Test-3	40	
	Assignments	10	
SEE	Semester End Examination	50	50
Grand Total			100

SEMESTER –I/II

SUBJECT: Engineering Physics (Integrated)

Semester	I/II	CIE Marks	50
Subject Code	22PHY12/22	SEE Marks	50
Hours/Week (L: T: P)	3:0:2	Examination Hours	03
No. of Credits: 04			

Course Objectives: The course will enable the students to

1	Learn the basic concepts in Physics which are very much essential in understanding and solving Engineering related challenges.
2	Make the students gain practical knowledge to correlate with the theoretical studies.
3	Achieve perfectness in experimental skills and ability to develop and fabricate engineering and technical equipment.

Content		No. of Hours/ RBT levels
Module 1		9 hrs/L3
<p>Elasticity & Oscillations</p> <p>Elasticity Fundamentals of elasticity: concept of stress, strain, stress-strain curve, moduli of elasticity, Relation between Y, n & σ. Beams, bending moment(no derivation), expression for Young's modulus using single cantilever, torsional oscillations, applications, numerical problems.</p> <p>Oscillations Free oscillation: Introduction, SHM, differential equation of SHM, expression for force constant in series & parallel combination of springs, numerical problems Damped oscillation: Theory of damped oscillations with examples, numerical problems. Forced oscillation: Theory of forced oscillations and resonance, numerical problems.</p>		
Pedagogy	Chalk & Talk, multimedia presentation Practical topics: Torsional pendulum, Single cantilever, Spring constant, LCR	
Module 2		8hrs/L3
<p>Quantum mechanics Wave-particle dualism, de Broglie hypothesis, de Broglie wavelength of an accelerated electron, Heisenberg's uncertainty principle, application of HUP(Non-existence of electrons inside the nucleus), significance and properties of wave function, Schrodinger's time independent wave equation, eigen functions & eigen values for a particle in one dimensional potential well of infinite height, numerical problems.</p>		
Pedagogy	Chalk & Talk, multimedia presentation Practical topics: Wavelength of LEDs	
Module 3		8hrs/L3
<p>LASERs & Optical fibers LASERs: Interaction of radiation with matter, Einstein's coefficients, Requisites and condition for laser action, He-Ne LASER, application of lasers in measurement of pollutants in the atmosphere, numerical problems. Optical fibers: Total internal reflection, angle of acceptance and numerical aperture(NA). Modes of propagation, V number and types of optical fibers.</p>		

HEAD OF THE DEPARTMENT
 Dept of Science & Humanities
 Global Academy of Technology,
 Rajarajeshwari Nagar, Bangalore-56.

Attenuation mechanisms, attenuation coefficient, applications, merits and demerits, numerical problems.		
Pedagogy	Chalk & Talk, multimedia presentation Practical topics: LASER diffraction, numerical aperture	
Module 4		8hrs/L3
Electrical properties of solids		
Quantum free electron theory: Assumptions of quantum free electron theory, Density of states(qualitative), expression for Fermi energy, Fermi factor & its temperature dependence, success of quantum free electron theory, numerical problems.		
Physics of semiconductors: Fermi level in intrinsic semiconductor, expression for conductivity, numerical problems.		
Dielectrics: Polar and non-polar dielectrics, types of polarization, expression for internal field in solids & liquids, dielectric constant of a dielectric material, applications, numerical problems.		
Pedagogy	Chalk & Talk, multimedia presentation Practical topics: Fermi energy, energy gap, dielectric constant	
Module 5		7 hrs/L2
Physics of Nanoscience & Material characterization		
Physics of Nanoscience: Introduction, Top-down approach, Bottom-up approach, Density of states 3D, 2D, 1D & 0D. Synthesis: Ball milling, arc discharge method, applications.		
Material characterization: Principle, construction, working of Fourier Transform Infrared (FTIR) spectroscope, Transmission Electron Microscope (TEM), applications.		
Pedagogy	Chalk & Talk, multimedia presentation	

SL. No.	Experiments	No. of Hours/ RBT levels
1	Spring constants in series and parallel combination	2 /L3
2	Wavelength of LEDs	2/L3
3	Frequency response in series and parallel LCR circuits	2/L3
4	Energy gap of a semiconductor	2 / L2
5	Acceptance angle and numerical aperture of an optical fiber	2 / L2
6	Rigidity modulus using Torsional pendulum	2/L2
7	Fermi energy of a conductor	2 / L2
8	Dielectric constant of a dielectric material	2 / L3
9	Young's modulus by single cantilever	2 / L3
10	Wavelength of LASER using diffraction grating	2 / L2

Course Outcomes: The students will be able to:

CO1	Apply the concepts of elasticity, oscillations in various applications.
CO2	Interpret the concepts of quantum mechanics & utilize in LASERs, optical fibers and electrical properties of materials.
CO3	Illustrate the steps involved in the synthesis & characterization of materials.

SEMESTER – I/II
COURSE: Elements of Mechanical Engineering

Course Code	22MEE13/23	CIE Marks	50
Hours/Week (L: T: P)	3 : 0 : 0	SEE Marks	50
No. of Credits	3	Examination Hours	03

Overview: The course is intended to be delivered to the I/II semester engineering students of all branches as a basic course. It covers the fundamental concepts and principles of various topics under Mechanical domain involving manufacturing systems, engine systems and advanced manufacturing principles.

Course Objectives: This course enables the students to

CLO1	Learn the fundamental concepts of the manufacturing process
CLO2	Comprehend the basic concepts of Design and Power Transmission
CLO3	Understand the concepts of Internal Combustion engines, Boilers, Turbines and Refrigeration
CLO4	Understand the concepts of Automation and Robotics in Industry
CLO5	Enumerate the knowledge of Materials, Joining process and additive manufacturing

Content	No. of Hours/ RBT levels
<p style="text-align: center;">Module 1</p> <p>Primary Manufacturing Processes: Casting, forging, rolling, drawing, extrusion, press tool work, plastic moulding and powder metallurgy (Introduction to the process and applications only)</p> <p>Joining Processes: Soldering, Brazing and Welding. Definitions. Working principle of Arc Welding, Oxy-Acetylene Welding. Comparison of the Soldering, Brazing and Welding processes</p> <p>Introduction to additive manufacturing: Definitions and stages involved in Additive Manufacturing. Applications of Additive Manufacturing.</p> <p><i>Demonstration of Additive Manufacturing</i></p> <p><i>Practice on metal arc welding (running bead)</i></p>	8 Hours L3
<p style="text-align: center;">Module 2</p> <p>Secondary Manufacturing Processes: (Turning, Drilling and Milling)</p> <p>Lathe – Construction and Specifications of a Centre Lathe, Operations on Lathe Machine - Turning, Facing, Knurling, Thread Cutting, Drilling</p> <p>Principle of a Drilling Process, Operations on Drilling Machine – Drilling, Boring, Counter boring, Countersinking, Reaming</p> <p>Principle of a Milling Process, Operations on Milling Machine - Plane Milling, End Milling, Slot Milling, Angular Milling, Form Milling, Straddle Milling, and Gang Milling.</p> <p><i>Demonstration of handheld and power tools and operations on machine tools, which may include machining of simple turning models, Drilling and/or milling.</i></p>	8 Hours L3
<p style="text-align: center;">Module 3</p> <p>Computer Numerical Control (CNC): Introduction, components of CNC, open-loop and closed-loop systems, advantages of CNC, CNC Machining Centres and Turning Centres.</p> <p>Robotics: Robot anatomy, joints and links, common robot configurations. Applications of Robots in material handling, processing, assembly, and inspection.</p> <p><i>Demonstration on CNC Machines</i></p> <p><i>Preparation of simple model on robot configurations</i></p>	8 Hours L3
<p style="text-align: center;">Module 4</p> <p>Introduction to automotive systems: Classification, I.C. Engines parts, Four-stroke Petrol and Four-stroke Diesel Engines, Simple problems on Indicated power, Brake Power and</p>	8 Hours L3

<p>Mechanical Efficiency, Green Fuels (Bio-diesel, CNG), Working principle of Electric and Hybrid vehicles.</p> <p>Boilers: Introduction to boilers, classification, Working principle of Water Tube and Fire Tube Boilers, (No sketch of any Boilers). Layout of Thermal Power Plant.</p> <p>Turbines: Classification of turbines, Hydraulic Turbines –Introduction, Principles and operation of Pelton Wheel Turbine, Francis Turbine and Kaplan Turbine.</p> <p>Refrigeration: Introduction & Definitions, Principle and working of Vapor Compression Refrigeration and Vapour Absorption Refrigeration. Types of Air Conditioners. <i>Demonstration and identification of Components in Automobile</i> <i>Demonstration of hydraulic turbines</i> <i>Demonstration of Components of the refrigerating unit.</i></p>	
<p style="text-align: center;">Module 5</p> <p>Introduction: Design Process: Definition of design, Phases of Design (Shigley Model)</p> <p>Belt drives: Open & Cross Belt Drives, Definitions -Slip, Creep, Velocity Ratio, the ratio of Tension in flat belt drives, advantages and disadvantages of V belts and Timing Belts, Simple numerical problems. (No derivations)</p> <p>Gear drives Types-Spur, Helical, Bevel, Worm Gears and Rack and Pinion. Velocity Ratio, Advantages and disadvantages over Belt Drives, Simple Numerical Problems on Velocity Ratio. <i>Demonstration on Belt drives</i> <i>Demonstration of gears and gear drives</i></p>	<p>8 Hours L3</p>

Course Outcomes: Upon completion of this course, students will be able to

CO1	Demonstrate the process of primary manufacturing, joining and additive manufacturing.
CO2	Demonstrate the secondary manufacturing processes such as Turning, milling and drilling.
CO3	Illustrate with applications the working principle of CNC Machines and varied robot configurations.
CO4	Interpret the principles of utilizing water as effective source of power generation with added principles of I.C. Engines and refrigeration.
CO5	Illustrate on the principles and applications of the core concept of power transmission in mechanical elements.

SEMESTER I/II

SUBJECT: Engineering Mechanics

Subject Code	22CIV14/24	CIE Marks	50
Hours/Week (L: T: P)	3:2:0	SEE Marks	50
No. of Credits	04	Examination Hours	03

Overview: The course is designed for I/II semester engineering students of all branches. It covers fundamental concepts and principles of engineering mechanics, application of these basics principles to solve static equilibrium problems related to **Civil, Mechanical, Automobile, Aeronautical, Mechatronics, Robotics and other allied engineering branches** where analysis for forces and displacement of particles or rigid bodies is involved. It also introduces the real-life problems involving the forces and computer applications to solve engineering mechanics problems. The knowledge of basic mathematics and physics is essential for the course.

Course Objectives: At the end of the course the student should be able to

CLO1	Understand the scalar presentation of forces and moments, apply the principles of engineering mechanics to particles and rigid bodies in equilibrium subjected to coplanar system of forces
CLO2	Realize the mechanical and sectional properties of engineering materials
CLO3	Understand the laws of motion. The kinematics of motion and the interrelationship

Content	No. of Hours/ RBT levels
Module-1 Statics of particles Introduction to Engineering Mechanics: Basic idealization and principles in Engineering Mechanics. Newton's laws of motion, units and dimensions, scalar and vectors Force and Systems of Forces, Moment of a force and couple, Varignon's theorem, Resolution and composition of forces – Coplanar concurrent and non-concurrent force system	8 Hours L3
Module - 2 Equilibrium of Rigid bodies Equilibrium of Forces: Free body diagrams, Lami's theorem, equations of equilibrium for coplanar concurrent and non-concurrent force systems, Support reactions for statically determinate beams at different loading conditions. Exercise: Demonstration of physical models	8 Hours L3
Module - 3 Centroid and Moment of Inertia Centroid of planar and built-up sections. Moment of Inertia and radius of gyration; Plane and built-up sections <i>Exercise: Display of engineering materials and visit to laboratory for demonstration</i>	8 Hours L3

Module- 4 Friction	
<p>Friction: Introduction, Frictional force, Types of friction-Static friction and Dynamic friction, Limiting friction, Laws of friction – Laws of Static friction and Laws of Dynamic friction, Angle of friction, Angle of Repose, Cone of friction, Ladder friction. Problems on Static friction – Horizontal plane, Inclined plane, Interconnected bodies and ladder friction.</p>	8 Hours L3
Module - 5 Kinematics and Kinetics of particles	
<p>Kinematics: Rectilinear and curvilinear motion, motion under gravity, projectile motion, relative motion Kinetics of Rigid Body: Introduction, Force, Mass and Acceleration, Work and Energy, Impulse and Momentum, D'Alembert's principles and dynamic equilibrium</p> <p><i>Exercise: Demonstration of principles with real life examples</i></p>	8 Hours L3

Course Outcomes: The students will be able to:

CO1	Categorize the system of forces and analyse for resultant of forces acting on structural elements
CO2	Write the equations of equilibrium and analyse the determinate structure for forces and moments
CO3	Evaluate centroid and moment of inertia of plane and composite sections
CO4	Apply equations of equilibrium in analyzing frictional forces.
CO5	Analyse the bodies in motion for motion characteristics and understand work energy principles

SEMESTER – I/II

Course: Python Programming (Integrated)

Subject Code	22ISE151/251	CIE Marks	50
Hours/Week (L: T: P)	3:0:2	SEE Marks	50
Total Hours	50	Examination Hours	03
No. of Credits: 04			

Course Objectives: The course will enable students to:

CLO1	Learn the syntax and semantics of Python Programming Language.
CLO2	Write Python functions to facilitate code reuse and optimization.
CLO3	Illustrate the process of structuring the data using lists, tuples and dictionaries.
CLO4	Demonstrate the use of built-in functions related regular expression, strings and to navigate the file system.
CLO5	Appraise the need for working with various documents like Excel

CONTENTS	No. of Hours & RBT levels
<p style="text-align: center;">Module 1 Introduction and Flow Control</p> <p>Introduction, Python Basics: Entering Expressions into the Interactive Shell, The Integer, Floating-Point, and String Data Types, String Concatenation and Replication, Storing Values in Variables, Your First Program, Dissecting Your Program. Flow control: Boolean Values, Comparison Operators, Boolean Operators, Mixing Boolean and Comparison Operators, Elements of Flow Control, Program Execution, Flow Control Statements, Importing Modules, Ending a Program Early with sys.exit(). Text Book 01: Chapters - 1, 2</p>	08 Hours & L3
<p style="text-align: center;">Module 2 Functions and List</p> <p>Functions: def Statements with Parameters, Return Values and return Statements, The None Value, Keyword Arguments and print(), Local and Global Scope, The global Statement, Exception Handling, A Short Program: Guess the Number Lists: The List Data Type, Working with Lists, Augmented Assignment Operators, Methods, List-like Types: Strings and Tuples, References Text Book 01: Chapters - 3, 4</p>	08 Hours & L3
<p style="text-align: center;">Module 3 Dictionaries and String</p> <p>Dictionaries and Structuring Data: The Dictionary Data Type, Pretty Printing, Using Data Structures to Model Real-World Things, Nested Dictionaries and Lists Manipulating Strings - Working with Strings, Useful String Methods Project: Password Locker Text Book 01: Chapters - 5, 6</p>	08 Hours & L3
<p style="text-align: center;">Module 4 Regular Expressions and Files</p> <p>Pattern Matching with Regular Expressions: Finding Patterns of Text without Regular Expressions, Finding Patterns of Text with Regular Expressions, More Pattern Matching with Regular Expressions, Greedy and Nongreedy Matching, The findall() Method, Character Classes, Making Your Own Character Classes, The Caret and Dollar Sign Characters, The Wildcard Character, Review of Regex Symbols, Case-Insensitive Matching, Substituting Strings with the sub() Method, Managing</p>	08 Hours & L3

Global Academy of Technology,

Rajarajeshwari Nagar Bengaluru-98.

Complex Regexes, Combining re.IGNORECASE, re. DOTALL, and re. VERBOSE. Reading and Writing Files: Files and File Paths, The os.path Module, The File Reading/Writing Process, Saving Variables with the shelve Module, Saving Variables with the pprint.pformat() Function. Text Book 01: Chapters - 7, 8	
Module 5 Files and Spreadsheets	
Organizing Files: The shutil Module, Walking a Directory Tree, Compressing Files with the zipfile Module. Working with Excel Spreadsheets: Excel Documents, Installing the openpyxl Module, Reading Excel Documents, Project: Reading Data from a Spreadsheet, Writing Excel Documents, Project: Updating a Spreadsheet, Setting the Font Style of Cells, Font Objects, Formulas, Adjusting Rows and Columns, Charts. Text Book 01: Chapters - 9, 12	08 Hours & L3

PROGRAMMING EXERCISES

Lab No.	PROGRAMMING EXERCISES ON
1.	Programs on data types, string concatenation and replication
2.	Program on operators and Flow Control Statements
3.	Programs on loops
4.	Programs on Functions
5.	Programs on List and Tuples
6.	Programs on Dictionaries
7.	Programs on String manipulation functions
8.	Programs on Pattern Matching with Regular Expressions
9.	Programs on File Handling
10.	Programs on Excel
11.	Revision/ Practice Lab/ Doubt clearing Lab
12.	Continuous Internal Evaluation (CIE) Test

Note: The sample set of programs are provided on each topic for the reference only.

The course instructor/ Lab in-chargers are given a liberty to ask any kind of questions in the laboratory on the specified the topic and encourage students to write program by themselves.

Course Outcomes: Upon successful completion of this course, student will be able to

22ISE151.1	Experiment with the concepts of data types, Operators and Flow Control Statements of Python
22ISE151.2	Write programs using functions and strings.
22ISE151.3	Make use of methods to create and manipulate lists, tuples and dictionaries.
22ISE151.4	Develop programs for Pattern Matching and file handling using python packages
22ISE151.5	Utilize python packages to work on Spread Sheets

Recommended Tools: Linux. Lclipse, PyCharm, Visual Studio 2019,

Scheme of Examination:

Scheme of Evaluation: (Integrated courses)

Semester End Examination (SEE):

SEE Question paper is to be set for 100 marks and the marks scored will be proportionately reduced to 50. There will be two full questions (with a maximum of four sub questions) from each module carrying 20 marks each. Students are required to answer any five full questions choosing at least one full question from each module.

The laboratory assessment would be restricted to only the CIE evaluation.

Continuous Internal Evaluation (CIE):

Three Tests are to be conducted for 40 marks each. The average of the three tests are taken for computation of CIE on a scale of 30, the CIE would also include laboratory evaluation for 20 marks. The laboratory marks of 20 would comprise of 10 marks for regular laboratory assessment to include lab record and observation. 10 marks would be exclusive for laboratory internal assessment test to be conducted at the end of the semester. Typical Evaluation pattern for integrated courses is shown in the Table below

Table: Distribution of weightage for CIE & SEE of Integrated courses

	Component	Marks	Total Marks
CIE	CIE Test-1	30	50
	CIE Test-2	30	
	CIE Test-3	30	
	Laboratory	20	
SEE	Semester End Examination	50	50
Grand Total			100

Semester I / II

COURSE: COMMUNICATIVE ENGLISH

Course Code	22EGH16/26	CIE Marks	50
Hours/Week (L: T: P)	1:0:0	SEE Marks	50
No. of Credits	1	Examination Hours	1 hour

Course Objectives

To enable students to apply the knowledge of various forms of communication of English language in of engineering by making them to learn the following:

CLO1	Enhance the effective writing practices.
CLO2	Incorporate strong reading skills.
CLO3	Demonstrate efficient listening skills.
CLO4	Learn different styles of speaking.

Content	No. of Hours/RBT levels
<p align="center">Module 1- Writing Section</p> <p>Academic writing module: Responses to the academic writing module are short essays or general reports, addressed to an educated non-specialist audience. There are two compulsory tasks. Task 1 requires 150 words, and looking at a diagram, table, or data and to present the information in their own words. Task 2 requires at least 250 words, students to be presented with a point of view, argument, or problem and asked to provide general factual information, present a solution, justify an opinion, evaluate ideas and evidence, etc.</p> <p>It includes two tasks wherein the topics are of general interest and relatable for candidates applying for an undergraduate or postgraduate program. For your first task, you will be handed a paper that would contain either a diagram, table, or graph. You will be required to recapitulate and define the given data in your own words. You may be asked to explain a certain data entry, process the given information, or a flowchart to logically arrive at a conclusion. In the next task, you need to write an essay as a response to your deduction from the given data and support your argument with relevant examples, through the given data. Please note that the writing style should be strictly formal.</p>	3/L3
<p align="center">Module 2- Reading Section</p> <p>This includes three long paragraphs which can be either descriptive, factual or analytical. These paragraphs are basically excerpts taken from newspapers, research works, journals, books, or even magazines.</p>	3/L3
<p align="center">Module 3 - Listening Section</p> <p>The Listening module is divided into four sections. The first two conversations are concerned with social needs, while the last two are concerned with situations more closely related to education.</p> <p>Sections 1 and 2 are about every day, social situations</p> <p>Recording 1: The first recording would have a conversation between two people set in an everyday social context.</p> <p>Recording 2 – The second recording would happen to be a monologue set in an everyday social context.</p> <p>Sections 3 and 4 are about educational and training situations</p> <p>Recording 3 – The following recording would be a conversation between four people set in an educational or training context.</p>	3/L3

Recording 4 – And the final recording would be a monologue on an academic subject	
<p style="text-align: center;">Module 4 - Speaking Section</p> <p>The Speaking section is like a structured interview with an emphasis on general speaking skills.</p> <p>Part 1 introduction and interview (4–5 minutes) For the first five minutes, you will be asked some mundane questions about yourself such as family, home, studies, hobbies and interests, and so on.</p> <p>Part 2 long turn (2–3 minutes) Next, a flash card will be handed over that would contain a certain topic. You will be given a minute or two to familiarize yourself with the topic as you would need to speak on that topic for about two minutes. Post your speech</p> <p>Part 3 discussions (5–6 minutes) Deeper questions and abstract discussions would take place based on the given topic and your speech. You will get the opportunity to explore your given topic and delve into deeper issues.</p>	3/L3

Course Outcomes

Upon completion of this course, student will be able to:

CO11.1	Write concisely using effective practices.
CO11.2	Read comprehension effectively and decipher required information.
CO11.3	Listen to audio from various settings and decode information.
CO11.4	Practically demonstrate good speaking skills.

Semester I/II

Engineering Chemistry (Integrated)

Subject Code	22CHE12/22	CIE Marks	50
Hours/Week (L: T: P)	3:0:2	SEE Marks	50
Total Hours	64	Examination Hours	03
Semester: I/II		No. of Credits: 04	

Course Learning Objectives: The course will enable the students to

CLO1	Know the fundamental concepts of Chemistry which are very much essential in day to day life, in industries and in research and development to solve Engineering related challenges.
CLO2	Impart Practical skills for better understanding of theoretical concepts.

Content	No. of Hours/ RBT levels
<p>Module-1: Electrochemical Energy Systems Electrochemistry: Introduction: EMF of cell, Free Energy, Single electrode potential-Nernst equation, Numerical problems. Reference Electrodes: Introduction, Construction, working and applications of Calomel electrode, Ion selective electrodes-Glass electrode, determination of pH using Glass electrode. Concentration Cells: Introduction, numerical problems Energy Systems: Introduction, Classification. Construction, working and applications of Li-ion battery and recycling of Lithium batteries. Fuel Cells: Introduction, Construction, working and applications of Methanol-Oxygen fuel cell(acid electrolyte-based methanol oxygen fuel cell).</p>	08 Hours/ L2
<p>Module 2 Corrosion Science and Metal finishing Corrosion Science:Introduction: Electrochemical theory of corrosion. Types of corrosion-Differential metal corrosion, differential aeration corrosion and stress corrosion. Factors affecting the rate of corrosion-Anodic & Cathode areas, pH of corrosion medium and Nature of corrosion product. Corrosion control: Metal coating. Galvanization. Cathodic protection-sacrificial anode method and impressed current method. Metal Finishing: Introduction, Technological importance, Electroplating-Introduction, Electroplating of Chromium,Electroless plating-Introduction, Electroless plating of copper on PCB, Differences between electroplating and electroless plating.</p>	08 Hours/ L2
<p>Module 3 Chemical Energy Sources, Lubricants & Refractories Chemical Energy Sources: Fuels - Introduction, Classification, Calorific value-GCV & NCV, Determination of Calorific value by Bomb Calorimeter, Numerical problems. Petroleum cracking-Fluidized bed cracking Alternative Energy sources: Bio Diesel, Power alcohol, CNG, Biogas, Hydrogen-as a fuel, Solar energy-PV cell: construction, working and applications. Lubricants: Introduction, Classifications, Properties- Viscosity index, Flash point, Drop point test and applications of lubricants. Refractories: Introduction, Properties, brief account of steps involved in manufacturing with examples and applications.</p>	08 Hours/ L2,L3
<p>Module 4 Polymers& Water Technology Polymers: Introduction, Synthesis and applications of Polyurethane. Polymer composites-Kevlar Fibre and carbon fibre, Conducting Polymers: Synthesis & Mechanism of conduction in conducting poly aniline and Photoconductive polymers.</p>	08 Hours/ L2, L3

Water Technology: Introduction, impurities in water, determination of hardness of water, COD-definition, determination and numerical problem, Softening of water by ion exchange process, Desalination of water-Reverse Osmosis, Sewage treatment.	
Module 5 Instrumental methods of analysis, Chemistry of Nanomaterials and Environmental Chemistry Instrumental methods of analysis: Theory, instrumentation and application of Colorimeter, Potentiometer and Conductometer. Chemistry of Nanomaterials: Introduction. synthesis of ZnO nano material by solution combustion method & synthesis of TiO ₂ nano material by sol gel method. Characterization techniques- PXRD and SEM. Applications. Carbon based nanomaterials-Introduction to fullerenes Carbon nano tubes & Graphene Environmental Chemistry: Air Pollutants: Sources, effects and control of Primary air pollutants- Carbon monoxide, Oxides of nitrogen and Sulphur. Waste Management: e-waste & Biomedical waste (scientific land filling, composting and recycling). Recycling of water and Rain water harvesting	08 Hours/ L2, L3

List of Engineering Chemistry Lab Experiments

SL. No.	Experiments	No. of Hours/ RBT levels
Part- A: Instrumental Experiments		
1	Determination of pKa value of a weak acid using pH meter	2
2	Estimation of FAS present in the given solution by potentiometric method	2
3	Determination of amount of HCl and CH ₃ COOH present in a mixture by conductometry	2
4	Estimation of copper in the effluent from electroplating industry by colorimetric method.	2
Part-B: Volumetric Experiments		
1	Determination of Chemical oxygen demand of industrial waste water	2
2	Determination of percentage of copper in brass by Iodometric method	2
3	Determination of percentage of iron in the given rust solution using standard Potassium Dichromate solution (External indicator method)	2
4	Determination of Total hardness of given water sample by rapid EDTA method	2
5	Determination of Nickel using EDTA by complexometric method	2

SL. No.	Experiments	No. of Hours/ RBT levels
Part-C: Virtual & Demonstration Experiments		
1	Determination of Viscosity coefficient of a liquid using viscometer (Virtual Experiment)	2
2	Determination of calorific value of solid fuel using bomb calorimeter (Demonstration)	2
3	Synthesis of ZnO nanomaterial by sol-gel method (Demonstration)	2

8. T. Pradeep, A Text book of Nanoscience and Nanotechnology, McGraw Hill Education (India) Pvt., Ltd., 1st edition, 2015.

Course Outcomes: Upon successful completion of this course, student will be able to:

CO1	Discuss the electrochemical energy systems such as electrodes, batteries and fuel cells.
CO2	Explain the fundamental concepts of corrosion, its control and surface modification methods namely electroplating and electroless plating.
CO3	Interpret the concepts of nonrenewable (Petroleum), renewable (solar energy) & alternative energy sources, Lubricants and Refractories.
CO4	Enumerate the importance, synthesis and applications of Polymer, water treatment and water analysis by volumetric methods.
CO5	Illustrate the fundamental principles and applications of instrumentations, nanomaterials, environmental pollution and its control measures.
CO6	Evaluate the percentage of copper, Nickel and Iron in the given analyte solution.

SEMESTER – I/II

COURSE: COMPUTER AIDED ENGINEERING DRAWING

Course Code	22MEG13/23	CIE Marks	50
Hours/Week (L: T: P)	2 : 0 : 2	SEE Marks	50
No. of Credits	3	Examination Hours	03

Overview: The course is designed for the I/II Semester Engineering students of all branches. It covers fundamental concepts and principles of engineering drawing with the emphasis on use of drafting software. Engineering drawing is a graphical medium of expression of technical details without the barrier of a language and termed as universal language of engineers. Engineering drawings are important in conveying useful information to other engineers with standardized conventions, rules, and regulations. The end goal of an engineering drawing is to convey all the required technical information that will allow a manufacturer to produce any kind of component in all the fields of engineering.

Course Objectives: At the end of the course, the student should be able to

CLO1	Understand the concept of BIS conventions in Engineering drawing.
CLO2	Apply the theoretical concepts to sketch orthographic projections in different positions.
CLO3	Understand the concepts of isometric projections of combination of solids.
CLO4	Use CAD tools for creation of Engineering drawings.

CONTENT	No. of Hours/ RBT levels
<p>Module 1: Introduction to Engineering Drawing & Orthographic Projections of points and lines BIS conventions and standards. Introduction to drafting software, Planes of projection, reference line, Quadrants and conventions employed. Projections of points in all the four quadrants. Projections of straight lines (First angle projection only): Introduction, Line inclined to both the planes, true and apparent lengths, true and apparent inclinations to reference planes. <i>Application problems as demonstration only.</i></p>	<p>10 Hours L3</p>
<p>Module 2: Projections of plane surfaces (First angle projection only): Introduction, Projections of regular plane surfaces—triangle, square, rectangle, pentagon, hexagon and circle - inclined to both the planes (change of position method only).</p>	<p>09 Hours L3</p>
<p>Module 3: Projections of Solids Introduction, Type of solids, Projections of right regular prisms like square, hexahedron(cube), pentagon, hexagon and pyramids like square, pentagon, hexagon, cone & tetrahedron in different positions (Inclined to both HP and VP).</p>	<p>12 Hours L3</p>
<p>Module 4: Isometric Projection (using isometric scale only) Introduction, Isometric scale, Isometric projection of combinations of solids (Maximum of two solids) like cube, regular prisms, cylinders, pyramids, cone, tetrahedron, frustum of pyramids, cone & sphere. <i>Demonstration of 3D solid models of prisms and pyramids using modelling software.</i></p>	<p>09 Hours L3</p>

Problems from the above modules must be practiced on computer aided drafting software.

HEAD OF THE DEPARTMENT
 Dept of Science & Humanities
 Global Academy of Technology
 Rajarajeshwari Nagar Bengaluru-98.

COURSE OUTCOMES: The students will be able to

CO1:	Demonstrate competence in the basics of orthographic projections of points, lines and planes.
CO2:	Sketch the orthographic projections of solids inclined to both horizontal & vertical planes.
CO3:	Generate isometric projections of various combinations of solids.
CO4:	Demonstrate 2D drafting of lines, planes & solids using solid edge software.

Textbooks:

1. K.R. Gopala Krishna, Sudhir Gopalakrishna, Engineering Graphics, Subhas Publishers, Bangalore, 40th edition, 2018-19.
2. N.D. Bhatt, Engineering Drawing, Charotar Publishing House, Gujarat, 53rd edition, 2014

References:

1. Luzadder Warren J., Duff John M., Fundamentals of Engineering Drawing with an Introduction to Interactive Computer Graphics for Design and Production, Pearson India, 2015.
2. P. L. Varghese, Engineering Graphics McGraw Hill Education (India) Pvt. Ltd, and New Delhi, 2013.
3. N.S. Parthasarathy & Vela Murali, Engineering Drawing, Oxford University Press, 2015.

ASSESSMENT**CIE Assessment:**

Particulars	Marks
Test 1 (Module 1 and Module 2) - @ 8 week	30
Test 2 (Module 3 and 4) - @ 14 weeks	30
Average of Test 1 & Test 2	30
Periodic Evaluation of Sketch Book	20
Total Marks	50

SEE Assessment: Maximum of **THREE QUESTIONS** will be set for **SEE** as per the pattern given below:

Scheme of Evaluation:

Modules	Marks Allocated
Module 1 & 2: Projection of Points, Lines Or Projection of Planes	30
Module 3: Answer any ONE question out of TWO Questions from Projection of solids	40
Module 4: Answer any ONE question out of TWO Questions from Isometric Projections	30
Total Marks	100

Question No.	Solutions and sketching in the sketch book	Computer Printout	Total Marks
1	15	15	30
2	20	20	40
3	15	15	30
Total Marks	50	50	100

Students have to submit the computer printouts and the hand drawn sketches at the end of the examination for evaluation.

SEMESTER – I/II

Course: C Programming (Integrated)

Course Code	22CSE14/24	CIE Marks	50
Hours/Week (L: T: P)	3:0:2	SEE Marks	50
No. of Credits	4	Examination Hours	3

Course Objectives:

CO1	Write algorithms, flowcharts and programs.
CO2	Implement different programming constructs and decomposition of problems into functions
CO3	Use and implement data structures like arrays and structures to obtain solutions.
CO4	Define and use of pointers with simple applications

Content	No. of Hours/ RBT levels
<p align="center">Module 1 INTRODUCTION TO C PROGRAMMING</p> <p>Introduction to Computing: Introduction, Art of Programming through Algorithms and Flowcharts. Basic structure of C program, executing a C program.</p> <p>Constants, Variable and Data Types: Introduction, Character Set, C Tokens, Keywords and Identifiers, Constants, Variables, Data Types, Declaration of Variables, Assigning Values to Variables, Defining Symbolic Constants,</p> <p>Managing I/O functions: Formatted Input and Formatted Output functions.</p> <p>Operators and Expressions: Introduction, Arithmetic Operators, Relational Operators, Logical Operators, Assignment Operators, Increment and Decrement Operators, Conditional Operator, Bitwise Operators, Special Operators, Arithmetic Expressions, Evaluation of Expressions, Precedence of Arithmetic Operators, Type Conversions in Expressions, Operator Precedence and Associativity, Example Programs.</p>	<p>08 Hours L2</p>
<p align="center">Module 2 CONTROL STRUCTURES</p> <p>Decision Making and Branching: Introduction, Decision Making with IF Statement, Simple IF Statement, the IF-ELSE Statement, Nesting of IF-ELSE Statements, The ELSE IF Ladder, The Switch statement, Example Programs.</p> <p>Decision Making and Looping: Introduction, The while Statement, The do statement, The for statement, Jumps in LOOPS, Example Programs.</p>	<p>08 Hours L3</p>
<p align="center">Module 3 INTRODUCTION TO ARRAYS AND STRINGS</p> <p>Arrays: One-dimensional Arrays, Declaration of One-dimensional Arrays, Initialization of One-dimensional Arrays, Example programs. Two-dimensional Arrays, Declaration of Two-dimensional Arrays, Initialization of Two-dimensional Arrays, Example programs.</p> <p>Character Arrays and Strings: Declaring and Initializing String Variables, Reading Strings from Terminal, Writing Strings to Screen, Arithmetic Operations on Characters, String-handling Functions, Example Programs.</p>	<p>08 Hours L3</p>

HEAD OF THE DEPARTMENT
 Dept of Science & Humanities
 Global Academy of Technology,
 Rajarajeshwari Nagar Bengaluru-98

Module 4 FUNCTIONS AND INTRODUCTION TO POINTERS	
User-defined Functions: Elements of User-defined Functions Return Values and their Types, Category of Functions, Recursion, Example Programs. Pointers: Introduction, Declaring Pointer Variables, Initialization of Pointer variables, accessing a Variable through its Pointer, Pointer Expressions, Pointer Increments and Scale Factor, Example Programs.	08 Hours L3
Module 5 STRUCTURES AND FILE MANAGEMENT	
Structures: Introduction, Defining a structure, declaring structure variables, accessing structure members, structure initialization, array of structures. File Management in C: Introduction, Defining and opening a file, closing a file, Input/output and Error Handling on Files.	08 Hours L3

Program List	
1	Write a C program to perform swapping of two numbers using i) Repetitive subtraction technique ii) Bitwise operators.
2	Write a C program to find the circumference and area of a circle. The input must be an integer value but the output must be rounded off to 3 decimal digits.
3	Write a C program: i) To find roots of a Quadratic equation. ii) Generate the Fibonacci sequence of first N numbers.
4	Write a C program to search for an element in an array using i) Binary Search algorithm ii) Linear Search algorithm
5	Write a C program to arrange the elements of an integer array using Bubble Sort algorithm.
6	Write a C program to input two matrices and perform matrix operations like multiplication, finding trace of a matrix, transpose of a matrix. (Any one operation may be asked in the examination).
7	Write a C program to check whether the given string is palindrome or not without using Library functions.
8	Write a C program to accept the number as a parameter through a user defined function and find its factorial by using recursion.
9	Write a C program to count the number of lines, words and characters in a given text file and write the output to a separate file.
10	Write a C program to maintain a record of n student details using an array of structures with four fields - Roll number, Name, Marks and Grade. Calculate the Grade according to the following conditions. Marks Grade ≥ 80 A ≥ 60 B ≥ 50 C ≥ 40 D.

COURSE OUTCOMES:

Upon completion of this course, student will be able to:

CO14.1/CO24.1	Describe the fundamentals of C programming Language.
CO14.2/CO24.2	Apply appropriate Control structures to solve problems.
CO14.3/CO24.3	Describe the concept of Arrays and Strings
CO14.4/CO24.4	Write User defined functions and apply concept of recursion and files to solve problems
CO14.5/CO24.5	Describe the concept of Pointers and Structures.

2. <https://nptel.ac.in/courses/106/105/106105171/>

Scheme of Examination:

Scheme of Evaluation:

(Integrated courses)Semester

End Examination (SEE):

SEE Question paper is to be set for 100 marks and the marks scored will be proportionately reduced to

50. There will be two full questions (with a maximum of four sub questions) from each module carrying 20marks each. Students are required to answer any **five full questions** choosing at least **one full question** from each module.

The laboratory assessment would be restricted to only the CIE evaluation.

Continuous Internal Evaluation (CIE):

Three Tests are to be conducted for 40 marks each. The average of the three tests are taken for computation of CIE on a scale of 30, the CIE would also include laboratory evaluation for 20 marks. The laboratory marks of 20 would comprise of 10 marks for regular laboratory assessment to include lab record and observation. 10 marks would be exclusive for laboratory internal assessment test to be conducted at the end of the semester.

Typical Evaluation pattern for integrated courses is shown in the Table below

Table: Distribution of weightage for CIE & SEE of
Integrated courses

	Component	Marks	Total Marks
CIE	CIE Test-1	30	50
	CIE Test-2	30	
	CIE Test-3	30	
	Laboratory	20	
SEE	Semester End Examination	100	50
Grand Total			100

SEMESTER I/II

SUBJECT: WASTE MANAGEMENT

Subject Code	22CIV151/251	CIE Marks	50
Hours/Week (L: T: P)	3:2:0	SEE Marks	50
No. of Credits	04	Examination Hours	03

Course Objectives: At the end of the course the student should be able to

CLO1	Understand on various aspects of solid waste management practiced in industries.
CLO2	Recovery of products from solid waste to compost and biogas, incineration and energy recovery
CLO3	Hazardous waste management and treatment, and integrated waste management.

Content	No. of Hours/ RBT levels
Module-1 Introduction to Solid Waste Management: Classification of solid wastes (source and type based), solid waste management (SWM), elements of SWM, ESSWM (environmentally sound solid waste management) and EST (environmentally sound technologies), factors affecting SWM, Indian scenario, progress in MSW (municipal solid waste) management in India. Indian and global scenario of e-waste	10 Hours /L3
Module - 2 Waste Generation Aspects: Waste stream assessment (WSA), waste generation and composition, waste characteristics (physical and chemical), health and environmental effects (public health and environmental), comparative assessment of waste generation and composition of developing and developed nations, a case study results from an Indian city, handouts on solid waste compositions. E-waste generation.	10Hours /L3
Module - 3 Collection, Storage, Transport And Disposal of Wastes: Waste Collection, Storage and Transport: Collection components, storage-containers/collection vehicles, collection operation, transfer station, waste collection system design, record keeping, control, inventory and monitoring, implementing collection and transfer system, a case study. Waste Disposal: key issues in waste disposal, disposal options and selection criteria, sanitary landfill, landfill gas emission, leachate formation, environmental effects of landfill, landfill operation issues, a case study	10 Hours /L3
Module- 4 Waste Processing Techniques & Source Reduction, Product Recovery & Recycling: Purpose of processing, mechanical volume and size reduction, component separation, drying and dewatering. Source Reduction, Product Recovery and Recycling: basics, purpose, implementation monitoring and evaluation of source reduction, significance of recycling, planning of a	10 Hours /L3

recycling programme, recycling programme elements, commonly recycled materials and processes, a case study	
<p style="text-align: center;">Module - 5</p> <p>Hazardous Waste Management and Treatment: Identification and classification of hazardous waste, hazardous waste treatment, pollution prevention and waste minimization, hazardous wastes management in India. E-waste recycling.</p>	10 Hours /L3

Course Outcomes: The students will be able to:

CO 1	Apply the basics of solid waste management towards sustainable development
CO 2	Apply technologies to process waste and dispose the same.
CO 3	Design working models to convert waste to energy
CO 4	Design working models to convert waste to energy

Scheme of Examination:

Semester End Examination (SEE):

SEE Question paper is to be set for 100 marks and the marks scored will be proportionately reduced to 50. There will be two full questions (with a maximum of four sub questions) from each module carrying 20 marks each. Students are required to answer any five full questions choosing at least one full question from each module.

Continuous Internal Evaluation (CIE):

Three Tests are to be conducted for 40 marks each. Average of three test marks will be added to test component. CIE is executed by way of two quizzes / Alternate Assessment Tools (AATs), and two tests.

Some possible AATs: seminar/assignments/ mini-projects/ concept videos/ partial reproduction of research work/ group activity/ any other.

CO 4	3					3	3					
Average	3					3	3					

Semester I / II
Innovation & Design thinking

Course Code	22IDT16/26	CIE Marks	50
Hours/Week (L: T: P)	1:0:0	SEE Marks	50
No. of Credits	1	Examination Hours	1 hour

Course Objectives

CLO1	To explain the concept of customer-oriented innovation approach
CLO2	To generate and develop creative ideas
CLO3	To understand various approaches and methods onto business process

Content	No. of Hours/RBT levels
Module - 1 Design Thinking	
Introduction, Principles of Design Thinking, process of Design Thinking, problem space and solution space. Understand the problem statement: PESTEL Analysis, Trend Impact Analysis, Delphi method, Ishikawa diagram, Root conflict analysis, Field maps	6/L3
Empathetic design: Nine dimensions of descriptive observations, methods for Empathetic design - Artifact Analysis, Cognitive Walkthrough, Empathy map, Heuristic Evaluation, Customer Journey, Mystery Shopping, Behavioural Mapping & Tracking	
Module -2	
Defining the problem – Persona, jobs- to-be-done methods Ideate phase, stages, Internal and external sources of information, Creative principles, Intuitive Creative Techniques, Systematic Analytical Techniques, Evaluation of Ideas Prototype phase, Minimum viable product, Methods to analyse prototypes Testing Phase, methods of testing, conducting interviews, Conduct surveys, Kano model, desirability testing	6/L3

Course Outcomes

Upon completion of this course, student will be able to:

CO 1	Describe design thinking process used to solve problems by focusing on the needs of the customer.
CO 2	Analyse the problem to ascertain its context and origins and gain a better understanding of the prospective customers
CO 3	Analyse the data gathered during understand and observation stages to define the problem statement
CO 4	Create ideas and solutions for the problem that has been specified
CO 5	Create a prototype by validating assumptions and ideas that can be tested by the user.

Semester II

Course: Integral Calculus and Differential Equations

Course Code	22MAT21	CIE Marks	50
Hours/Week (L: T: P)	3:2:0	SEE Marks	50
No. of Credits	4	Examination Hours	03

Course Objectives

To enable students to apply the knowledge of Mathematics in various fields of engineering by making them to learn the following:

CLO1	Multiple integrals and Beta-Gamma functions
CLO2	Vector integration
CLO3	First and higher order ordinary differential equations
CLO4	Partial differential equations

Content	No. of Hours/ RBT levels
Module 1	
Multiple integrals: Evaluation of double integrals by direct evaluation, change of order and change of variables. Evaluation of triple integrals. Beta and Gamma functions; relation between beta and gamma functions - simple problems.	10 Hours L2, L3
Module 2	
Line integrals, Green's theorem in the plane, Stoke's theorem: Relation between line and surface integrals, Gauss Divergence theorem: Relation between surface and volume integrals- simple problems.	10 Hours L2, L3
Module 3	
Differential Equations of first order and first degree: Variable separable, Linear equations, Bernoulli's equation, Exact and reducible to exact differential equations. Equations of first order and higher degree (solvable for p only).	10 Hours L2, L3
Module 4	
Linear differential equations with constant coefficients -Inverse differential operators, method of variation of parameters. Cauchy's and Legendre's Linear differential equations.	10 Hours L2, L3
Module 5	
Formation of partial differential equations. Solution by direct integration, linear equations of first order. Homogeneous linear equations with constant coefficients. Method of separation of variables.	10 Hours L2, L3

Course Outcomes

Upon completion of this course, student will be able to:

CO21.1	Evaluate double and triple integrals
CO21.2	Evaluate definite integrals using beta and gamma functions
CO21.3	Evaluate integrals using Green's, Stokes and Gauss divergence theorem
CO21.4	Solve linear and nonlinear ordinary differential equations
CO21.5	Solve partial differential equations
